[NUMBER 1

## NOTES ON CURRENT MATTERS OF INDUSTRIAL INTEREST

### Monthly Summary

**I**NDUSTRIAL employment in Canada at the beginning of December showed the reduction usual at this season; the losses were on a much smaller scale than on the same date of 1931, and were also less than the average decline reported during the eleven years of the record. The Dominion Bureau of Statistics tabulated statements from 8,061 firms (each with at least 15 employees), employing an aggregate staff of 765,441 persons, as compared with 779,015 in the preceding month; the employment index stood at 83·2, compared with 84·7 on November 1, 1932, and 99·1 on December 1, 1931. On the same date in the ten preceding years the index was as follows: 1930, 108·5; 1929, 119·1; 1928, 116·7; 1927, 106·8; 1926, 102·3; 1925, 96·5; 1924, 91·9; 1923, 96·9; 1922, 96·3, and 1921, 88·3. These indexes, which are based upon the average number of employees of the reporting firms in the calendar year 1926 as 100, are indicative of conditions in all industries except agriculture, fishing, hunting and highly specialized business.

At the beginning of December, 1932, the unemployment percentage reported to the Department of Labour by local trade unions stood at 22·8 contrasted with percentages of 22·0 at the beginning of November and 18·6 at the beginning of December, 1931. The percentage for November was based on the reports received by the Department of Labour from 1,797 labour organizations with a combined membership of 161,058 persons.

Reports received by the Department of Labour from offices of the Employment Service of Canada showed an increase in the work transacted during November, 1932, when a comparison was made with October, but a decrease from that recorded during the corresponding month a year ago, the marked change in both instances taking place in the highway division of construction and maintenance. Vacancies in November, 1932, numbered 28,683, applications 65,165, and there were 27,383 placements in regular and casual employment.

The average cost per week of a list of twenty-nine staple foods for an average family of five in terms of the average retail prices in

sixty-nine cities declined slightly to \$7.04 for the beginning of December as compared with \$7.09 for November. Comparative figures for earlier dates were \$7.85 for December, 1931; \$10.10 for December, 1930; \$11.83 for December, 1929; \$10.39 for December, 1922; \$14.84 for December, 1920; \$16.92 for June, 1920 (the peak); and \$7.96 for December, 1914. In wholesale prices the index number calculated by the Dominion Bureau of Statistics was 64·0 for December as compared with 64·8 for November; 70·3 for December, 1931; 77·7 for December, 1930; 96·0 for December, 1929; 98·0 for December, 1922; 164·3 for May, 1920 (the peak); and 66·4 for December, 1914.

### Industrial Disputes Investigation Act

During the past month the Department received the report of the Board appointed in connection with the dispute between shipping interests at Saint John, N.B., and their longshoremen, together with a minority report. A Board was established during the month in the case of a dispute between the Canadian National Railways and its locomotive firemen and enginemmen. The text of the reports mentioned above, and particulars of proceedings during the month, are given on page 15 of this issue.

### Supplements on Wages and Hours of Labour and Prices in Canada and other countries

Two supplements are published with this issue of the LABOUR GAZETTE, continuing the series on wages and on prices issued annually in January in recent years. The first is the sixteenth report in the "Wages and Hours of Labour" series, giving information as to the year 1932, with comparative figures for 1931 and earlier years; it contains tables showing the wages and working hours of the principal classes of labour throughout the Dominion in various industries. The second supplement deals with the movement in retail and wholesale prices in Canada in 1932 and in previous years; tables are also given showing the movement of prices in other countries throughout the world.

### **Nova Scotia Department of Labour**

A Department of Labour has been established in Nova Scotia in pursuance of legislation enacted by the provincial legislature at the last session (LABOUR GAZETTE, August, 1932, page 865). The Hon. Gordon S. Harrington, Premier and Minister of Public Works and Mines, is the first Minister of Labour of the Province. The Secretary of Labour is Mr. Charles J. McDonald, of Glace Bay, chairman of the Dominion legislative board of the Brotherhood of Railroad Trainmen, who has been active in the labour movement in the province for many years. In 1902 Mr. McDonald became legislative representative of Lodge 684 of the Brotherhood, and still held that position at the time of his appointment as Secretary of Labour; in 1909 he was named chairman of the legislative board for Nova Scotia, serving as vice-chairman of the Dominion board until 1926, when he became chairman of the latter body.

### **Minimum wages in textile industry in Quebec**

Mr. Gustave Francq, chairman of the Minimum Wage Board in Quebec, recently issued a statement in reference to the wages paid to female employees in the textile industry in the province of Quebec. After quoting the rates fixed by the Board for experienced workers and for apprentices in Montreal and the rest of the province, Mr. Francq proceeded: "We desire to state that minimum wages cannot be assimilated to current wages. If an employer pays less than the minimum wages set by an order of the Minimum Wage Board he violates the law and is liable to a penalty of not more than \$100 for each offence. In general, the current wage paid in any industry is far above the legal average wage set by the law, as for instance in the textile industry in this province. In this industry the average wage per week for all female employees, including apprentices and experienced workers, be it remembered, was in Montreal \$12.89 in 1928; it was \$13.38 in 1929; it was \$13.33 in 1930, and \$13.45 in 1931, and up to July 1 of 1932, \$13.25.

"Turning to the wages in textile mills outside of Montreal, what is the situation? In 1928 the average was \$11.40; in 1929 it was \$12.04; in 1930 it was \$12.01; in 1931 it was \$12.33, and for the period up to July 1 of 1932 the average was \$11.50.

"These figures cover the entire field of the textile trades, including weaving, knitting, spinning and allied processes. If only the cotton mills were considered the average wage would be higher, as some of the silk mills and

knitting establishments are only paying the minimum wages required by law, which, naturally, tends to lower the average wage for the whole textile industry."

### **New First Aid movement in industry in Ontario**

New arrangements for the training of employees in Ontario in First Aid and accident prevention were concluded recently as the result of joint action by the Industrial Accident Prevention Associations of Ontario and the St. John Ambulance Association. The movement is actively supported by the Provincial Department of Health through the Deputy Minister, Dr. W. J. Bell, who is also a member of the Provincial Council of the St. John Association. The Industrial Accident Prevention Associations are represented by their manager, Mr. R. B. Morley, who was instrumental in carrying out the details of the plan. Last September, Mr. R. R. Buchanan was taken on the staff of the St. John Association, and he is now working as a field officer for the two organizations, the expenses of the work being defrayed by the "I.A.P.A." Classes have already been held, or are being arranged, in London, Oshawa, Toronto—East and West, Belleville, Kingston, Brantford, Galt, Guelph, and in industrial centres in the Ottawa Valley.

### **Accident liability of employees at various ages**

In *Industrial Medicine*, November, 1932, Dr. Hart E. Fisher, chief surgeon of the Chicago Rapid Transit Company gives the results of an exhaustive study of the "accident proneness" of workmen of various ages, based on elaborate tests of individual reactions to impressions, and also on actual records of past accidents. His conclusions are as follows: "So far, I believe that I may state without fear that those persons in the 40 to 59 year age group are the most efficient and safest for the work in which they are engaged. The persons in this age group have had less personal injuries, less unusual occurrences, less absenteeism from work on account of illness. It is also evident that there is less labour turnover and greater longevity in the persons in this second age group when compared with other age groups. Their having the more stable and rapid reaction time seems to fit them as the most desirable group to make efficient railroad men.

"Would not this lead our steps toward the study of the practice, so often prevalent in industry, of discrimination in employment of men over 40 years of age in favour of the younger men? The middle-age group have, to my mind, more stability of character, and their mental processes are not so apt to be disturbed and influenced under stress as their

younger brothers. This second age group may be better employees from their previous experience and on account of many of them being family men to a large degree with the responsibility of dependants to support; they are the more regular on the job; and they settle down satisfied with their work and remain longer with the company. Their habits are formed and more regular. With intelligent training and education, it is easier to instruct them in new practices and the formation of new work habits."

References to the problem of the older worker in industry will be found in the *LABOUR GAZETTE*, November, 1932, page 1182; June, 1930, page 621; December, 1930, page 1368, etc.

### **Settlement of Canadian families on the land**

The policy of the Government of Canada in encouraging the settlement of Canadian families on the land has been noted in recent issues of the *LABOUR GAZETTE* (December, 1932, page 1301). A review of the work that was carried on in this direction during the past year was given by the Hon. W. A. Gordon, Minister of Labour, and Acting Minister of Immigration and Colonization, in the course of an article contributed to the *Montreal Gazette's* "Commercial and Financial Review" for 1932. "The principal activities of my Department" (i.e. of Immigration), the Minister wrote, "aside from the necessary inspection and preventive service at ocean and boundary ports, are now directed toward the settlement on the land of families already resident in Canada. This line of activity was adopted in 1930, when the practice of encouraging immigration was discontinued. It was believed then—and subsequent experience has established that the belief was well-founded—that there were in the Canadian cities many families with farm background, attracted to the industrial centres in times of prosperity and still in possession of some capital, who would be glad to go back to the land if they could be reliably directed just where and how to go. A suggestion for procedure along this line was laid before the presidents of the Canadian Pacific and Canadian National Railways, who heartily concurred, and a committee was set up, with representatives of the two railways and the Department, to carry it into effect. Local organization was effected in the various provinces, and a small classified advertising campaign was undertaken to bring the services offered to the attention of all who might be in need of them. This work, initiated in 1930 and 1931, has been continued during 1932, and the results have exceeded all expectations. Although no financial assistance was given,

the three interests concerned, in the period from October, 1930, to September 30, 1932, were instrumental in placing on the land 9,493 families, and in finding farm employment for 20,689 single men. On the basis of five persons to a family this means a recorded land settlement of 68,154 souls. There is also no doubt that these activities contributed to the volume of similar settlement carried on by various provincial governments, and on personal initiative, no record of which is contained in these statistics. The value of this settlement work, particularly in times of distress and unemployment, must be recognized by all thoughtful citizens of the Dominion.

"An outcome of this experience in land settlement has been the adoption by the Dominion Government of a policy of co-operating with provinces and municipalities in settlement on the land of suitable families in place of relief expenditures which would otherwise be incurred on their account. This involves no greater expenditure than would be necessary to carry the families on relief, and substitutes the hope of self-dependence for the despair of unemployment. The Government believes that it is on sound ground both with respect to general colonization and relief land settlement, having regard to the necessity of increasing the number of rural residents in Canada in order to bring about a better economic balance and so insure a revival of both rural and urban prosperity."

### **Permanent unemployment reserve recommended in South Africa**

The creation of a special permanent unemployment fund has been recommended by the Unemployment Investigation Committee appointed by the Government of the Union of South Africa, whose report was published during December. To administer the fund the committee suggest a central board to which local authorities would apply. The money would be appropriated for public works, which would have to be approved by the board. The Central Board would consist of five members representing respectively the Union Government, the rural community, the workers, the employers, and the local authorities, with the government representative as chairman. The committee considers that where expenditure on the prevention and relief of unemployment is concerned, the fund, subject to any conditions laid down by the Central Board, should be used for the granting of subsidies or loans, or both, to government departments, provincial administrations, local authorities and public bodies; the Board to hand over to the public debt commissioners whatever portion of the fund is

not needed to meet current payments, to be invested by them in certain specified securities.

As to the extent to which local authorities should be required to co-operate in the prevention and relief of unemployment in their own areas the Committee recommends: "As regards works of a capital nature, the assistance to be given to local authorities should be confined to loans for a period of, say, five years, or to a contribution of a portion of the interest for, say, two or three years. In respect of reserve works, the scheme undertaken specially by local governing authorities for the prevention and relief of unemployment during a severe depression other than works of a capital nature, contributions in aid of any such expenditure by local authorities may be made from the fund to such extent and on such conditions as the Central Board may deem necessary."

After examining the position in the building trade, the committee states: "The conclusion that we have arrived at is that direct employment at their own trades and at the standard rate of wages could be provided only for a limited number of skilled artisans in the building and allied trades, and that the skilled workers in other industries would be dependent on how far industry generally would be stimulated by the putting into force of a works program and on the employment they could secure on the works designed for the employment of unskilled labour."

#### **Trade by barter in western United States**

A movement which has been observed during the past year, mainly in the western States, to exchange commodities directly by means of barter, was described in the *New Republic* (New York) for January 4. "Probably because of its prolific farm produce," it is stated, "the far west is the home of the largest and most extensive exchange organizations. About half a million people are benefiting from exchanges in California and thousands more in Washington and Oregon. Denver and Minneapolis have large and growing exchanges. They are to be found in Idaho, Montana, Utah, Texas, Oklahoma, North Dakota, Iowa, Wisconsin, Illinois, Indiana, Michigan, Ohio, Pennsylvania, New York, Connecticut, New Jersey, and Georgia. And most of them have been organized by the unemployed themselves."

Particulars are given of the movement in the Rocky Mountain States—Idaho, Wyoming, Utah, and Arizona. The idea first took form during the harvest season of 1931, when the farmers were in desperate need of hands to help them with their crops and, having no

cash, leaped at the chance of being able to pay wages in the form of produce. The group immediately established an exchange bureau in a small office, and as they had no money to advertise in the daily papers, they began personally to corral workers and farmers interested in the scheme. Having assembled a number of jobless men eager to exchange their labour for food the group hired trucks and the workers were delivered to the farmers, who had accepted a direct exchange for labour. The men worked all day in the fields and at nightfall were paid in potatoes, onions, carrots, parsnips, apples, peaches, butter, eggs or pork, according to their wants. The truck then came for them and their produce payments and returned them to their homes. By the middle of January, 1932, the exchange business had expanded to a point where it became necessary to incorporate the system and organize it into departments along modern lines. It was named the Natural Development Association. Growth, after the organization was incorporated, proceeded even more rapidly than before. Representatives of practically every kind of labour, trade and profession joined. The rapid expansion and increasing volume of business which the association was handling made a new development necessary. In July, 1932, scrip was introduced as the medium of exchange among members of the organization. By adopting this method, the exchange of products for work was greatly simplified and much costly and intricate bookkeeping avoided. The Natural Development Association issued the scrip in the form of stamp books of various denominations, the scrip being good for anything the Association has for exchange.

In a recent report the Association lists sixteen major kinds of commodities for exchange, including food products offered by farmers, dairymen, sheepmen and cattlemen. The N.D.A. Health Department operates fifteen distinct services, from medical treatment to drug-store service. The report also lists one hundred and three lines of unskilled labour, services and trades. All these commodities, services and trades are represented in the organization.

#### **Health of seamen in merchant marine**

A report on the mortality of merchant seamen was recently issued by the Registrar-General of Births and Deaths for England and Wales, as an appendix to his decennial report on occupational mortality (1927). The difficulty of obtaining trustworthy statistics for this occupation is noted, but certain tentative conclusions are

reached. The mortality rates of seamen in the mercantile marine are compared with those in the Royal Navy, with results not unfavourable to the merchant service when it is remembered that the men in the Navy are a picked body of men, and that their conditions of service (for example, in respect of continuity of employment) are in some respects more favourable than those of the generality of merchant seamen. The general conclusion, as regards comparison with other callings, is that "apart from drowning and injury, service in the mercantile marine is no more inimical to life and health than are many of the occupations ashore frequently regarded as healthful."

#### **Canadian Manufacturers favour shorter working hours**

At a recent meeting of the Executive Council of the Canadian Manufacturers' Association, the Industrial Relations Committee submitted a report supplementing their report to the last annual convention (LABOUR GAZETTE, June, 1932, page 678). The committee reported that they had made a study of the various methods which had been adopted by some of the larger companies for the spreading of work among as many employees as possible, and that they had sent out the following circular to the members of the Association:—

"It will be recalled that at the last annual meeting, a resolution was passed emphasizing, among other things, the need for members of the Association 'to maintain their efforts of the past two years in their own plants and elsewhere to the limit of their abilities and resources by distributing available work among as many employees as possible.' A study which has been made of the steps which are being adopted in some of the larger plants shows that, practically without exception, they are following the principle of employing a larger number of men on short time, rather than a smaller number of men on full time. Examples of the measures adopted include the five-day week, the four-day week, half-time employment, i.e., every other half day, or every other day, or every other week, reduction of hours to six per day or to thirty-six or twenty-four per week. Thus one large company whose volume of business for 1932 is only 59 per cent of the 1929 figure, has retained 80 per cent of its employees of 1929. A second company by reducing its work week from six days to 5 days, has been able to provide employment for one hundred more people than would otherwise be employed. The Industrial Re-

lations Committee recognizes of course that there is no one method which can be applied universally. It ventures, however, once more to emphasize the urgent need, at a time like the present, for every employer to endeavour to adopt some system that will keep a maximum of people in at least part-time employment."

#### **An actuary's views on social insurance**

In an address before the Canadian Club at Ottawa on December 15, Mr. Hugh H. Wolfenden discussed "the philosophy and principles of social insurance." Mr. Wolfenden is consulting actuary of the Canadian Life Insurance Officers' Association, and is the author of a book published last year under the title, "The Real Meaning of Social Insurance." The actuarial problems involved in the application of sound principles to the various departments of social insurance were referred to by the speaker: "Intricate mathematical procedure is involved," he said; "for the probabilities of sickness, accident, disability, marriage, withdrawal and death must be estimated for each sex and combined in many different ways with rates of interest and expense; in plans of unemployment insurance the rate of unemployment also, which is a very much less stable and easily-predictable contingency, must be computed."

Mr. Wolfenden regretted the indiscriminate use of the word "insurance" in connection with various non-contributory schemes. Insurance, he pointed out, is essentially co-operative, whether it is established with the aid of stock-holders, or on a basis of mutuality. "It is equally clear that all insurance is 'social' in the truest sense; and the term 'social insurance' accordingly, should not be reserved, as it generally is to-day, for describing only governmental schemes."

The speaker next outlined the developments in social theories, from the stage of unrestrained individualism to complete "regimentation," and suggested that State control might take a profitable turn by enforcing "minimum requirements of citizenship," instead of proceeding to further restrictions of individual action. Passing to the consideration of existing systems of social insurance Mr. Wolfenden observed that the British pensions and health insurance acts were founded largely upon Poor Law and Friendly Society administration which had no counterpart in Canada; and that the British unemployment insurance system had ceased in large measure to be insurance at all, while the German system had been hardly more fortunate.

Mr. Wolfenden concluded with the following constructive suggestion: "These differing experiences" he said, "lead inevitably to the conclusion that many of the State plans which are called 'insurance' are in fact not really insurance at all, and that the so-called 'actuarial basis' is often—not always, but often—a basis with which it is extremely difficult for an actuary to agree. They lead also to the thought that in many respects compulsory savings plans—and there is a very great difference between a savings plan and an insurance plan—that compulsory savings plans may well be found to provide a sounder basis for dealing with unemployment, and with sickness and old age as well. That method, at any rate, secures a perfectly definite and unmistakable relation between contributions and benefits which any man can understand, and thus removes completely all those misconceptions of the meaning and functions of insurance which until now have so largely undermined state operation of insurance."

**Increase in attendance at vocational schools in United States**

During the past two years the number of persons taking advantage of vocational education in the United States showed a marked increase. The Hon. W. N. Doak, U.S. Secretary of Labour, in a statement issued in January, said: "The popularity of vocational education, especially under adverse economic conditions, is demonstrated by the fact that even in the last two years enrolment has increased materially. Enrolment in the year ended June 30, 1932, was 1,176,162, as compared with 1,117,556 for the year ended June 30, 1931. This is an increase of over 53,000. Included in the 1932 figures is the enrolment of 257,000 farm boys and girls and adult farmers in vocational agriculture courses, 580,000 youths and adults in trade and industrial courses, and 339,000 girls and women in home economic courses. A summary of the program of vocational rehabilitation which, under the terms of the national vocational rehabilitation act of 1920 is also promoted by the Federal Board for Vocational Education, shows that notwithstanding the economic conditions of the past year, the number of rehabilitations increased 9 per cent over 1931."

The Secretary recalled that the Federal Board for Vocational Education was created in February, 1917, "not as a war agency to undertake the responsibility of providing vocational training for disabled soldiers—an unfortunate misapprehension that is rather widespread even to-day—but as an agency to

promote vocational education of less than college grade for adults and youths in agricultural, trade and industrial, and home-making occupations. The full-time, part-time, and evening schools set up in the 48 States under State plans for vocational education provide training not only for those who are planning to enter wage-earning employments, but also for those already employed who desire to improve their efficiency and hence their wage-earning capacity. The annual report of the Federal Board for Vocational Education shows that vocational education has a direct bearing upon the present economic situation in that many of those now unemployed are using their enforced leisure to get instruction in vocational education classes in new occupations to which they hope to return later. Instruction in vocational schools reaches into every kind of employment requiring a measure of technical or mechanical skill. Practical farm courses; courses covering trade and industrial occupations, such as the building trades, metal trades, mining, and specific lines of manufacturing; and courses in home making for girls and women are provided in these schools."

**Directory of British workers and employers organizations**

The British Ministry of Labour of Great Britain has published a revised edition of the Directory of employers' associations, trade unions, joint organizations, etc., corrected up to October, 1932. The directory contains lists of all the separate organizations of employers and employees (totalling over 3,200) known to the Ministry to be concerned with matters relating to the employment of labour, with the names and addresses of their secretaries. It also contains lists of joint organizations of employers and employees which deal with labour matters, including conciliation and arbitration boards, standing joint committees, joint industrial (Whitley) councils, trade boards, the Agricultural Wages Board and Agricultural Wages Committees, with their secretaries' names and addresses. The employers' associations, trade unions, etc., are classified in industrial groupings, and one of the new features of this issue of the directory is the arrangement of organizations under the names of the various federations to which they are affiliated. This has been done in the case both of employers' associations and of trade unions. In the case of trade unions, an indication is also given of those which are affiliated to the Trades Union Congress, and of those which are registered under the Trade Union Acts. Two indexes

are provided, one to employers' organizations, the other to trade unions, etc. The Directory covers Great Britain and Northern Ireland.

### **National Economic Council in Mexico**

A National Council was set up in Mexico in October, 1932, for the purpose of organizing and developing industry and agriculture.

This institution is similar to the national economic councils which already exist in some countries (reference to some of these councils was made in the *LABOUR GAZETTE*, February, 1931, page 118, and in other issues). It has been established with the help of organizations concerned in the economic development of the country, and its object will be to co-ordinate Government and private economic activities, and to express its views for this purpose on all questions within its scope. The Council has already established advisory sections for the technical study of problems of agriculture, industry, commerce, finance, statistics, communications and labour.

### **Economic control by government in Italy**

A bill making provision that future improvements or extensions of industrial equipment shall be subject to permission by the government was introduced in

the Italian Chamber of Deputies during November. The preamble states that the legislation is to give the government the necessary powers to exercise supervision over new industrial equipment, with a view to bringing the development of such equipment into harmony with the general economic position. The State, which has to make considerable financial sacrifices to facilitate the reduction of over-developed industries, is stated to have a right to intervene in industry, as it already does through the inspection it exercises for the purposes of national defence, policy, safety, hygiene, etc. The preamble adds that the headlong race for new investment, based rather on banking considerations than on industrial ones, is injurious not only in the present, but for the future also, in that it delays the revival of business. The proposed measure seeks to take into account the general position of the consumers' market for the purposes of new industrial development. In the industrial field, it is declared, as in the fields of banking, insurance and commerce, the principle of free enterprise must be limited by the superior conception of co-ordination in accordance with the general interest. On the basis of these considerations, the Bill is intended to grant the Government

the right of supervision of new industrial equipment and the power to enact the necessary measures of enforcement.

As a Christmas gift to the mining population at Caledonia Mines, Nova Scotia, Mr. John Dregatis, who conducts a grocery business in the district, recently wrote off his books the outstanding bills of his customers, valued at \$38,108. Mr. Dregatis, who is a native of Greece, formerly worked in the Caledonia colliery. "When times were good and work plenty," he stated, "these people always paid me. I know if times were good these bills on my books would be paid. I am going to try to make it a little easier for these people by telling them that now they owe me nothing. I am calling everything square. They will not have to worry at Christmas over what they owe John Dregatis."

Reference was made in the *LABOUR GAZETTE*, October, 1932, (page 1039) to the Unemployed Council movement in the United States, with special reference to the organization at Seattle, Washington. The *New Republic*, December 14, 1932, described the origin and purposes of this movement, which is now established in the form of councils or nuclei in some 340 towns throughout the country, with an estimated strength of about 300,000 workers. The Chicago membership is reported to be about twenty-five thousand.

At a recent meeting at Montreal, Mr. Tom Moore, president of the Trades and Labour Congress of Canada, advocated shorter working hours as a means of preventing the unemployment resulting from the use of machinery. He enumerated three ways for reducing working hours—shorter shifts, holidays with pay, and a shorter working day and week. Mr. Moore stated his preference for the latter plan, but he stipulated that wages must be kept up to their former level, or increased, as otherwise the worker's standard of living would be affected.

There was a general downward trend in the number of employment certificates issued to children in the United States from 1920 to 1931, according to reports received by the United States Children's Bureau from 13 cities. From 1929 to 1931 the decline in the number of children going to work was especially heavy. In 1931, 28 per cent of the children for whom this information was known started to work at the age of 14 years. Comparative figures over the period 1929 to 1931 indicate, however, a slightly greater decline in the employment of younger than of older children.

## GENERAL REVIEW OF THE INDUSTRIAL SITUATION

### Employment

THE employment situation throughout Canada at the end of December was reported by the Superintendents of the Employment Service of Canada as follows:—

Few requests for farm help were received in the province of Nova Scotia but local farmers were starting to cut wood. The demand for bushmen was almost nil, although some of the smaller operators were busy cutting pit props. Good catches of fish were reported along the coast. Mines in the New Glasgow area worked from one to four days per week, while the majority of those in Cape Breton and vicinity operated two days. Manufacturing, for the most part, was only fair, as confectioners and food manufacturers reported a decline in output, due to the end of the holiday season. Textiles were busy, while in the steel and iron industry, some idleness was reported. The major part of construction work in evidence was that done on streets and sewers by the various municipalities. Passenger transportation was heavy over the holidays, but freight traffic was light. Trade was dull, with collections slow. A number of calls were received in the women's division for charworkers, but the demand for home domestics, office and hotel help was slow.

Farmers did a fair business in New Brunswick in Christmas trees and local markets were well stocked with fowl. Fishing was fair, although moving ice did some damage to gear in the rivers. Logging was quiet. Manufacturing remained unchanged, with many of the mills working only on a part-time basis. Much of the building construction was completed. At West Saint John, however, considerable work was being done along the waterfront and in the outer channel. Road construction, also, had slackened as many government road machines had been placed under cover for the winter. Passenger and freight traffic was brisk over the holidays. Import water freight continued light, with export much improved over the corresponding period a year ago. This waterfront work provided employment for several hundred men. Retail houses reported practically the same amount of buying as in 1931, but of goods of cheaper quality, thus reducing the value by about one-third. Little change took place in the women's domestic section, where the usual requests were received for charwomen and hotel and domestic workers.

Practically no orders for farm help were received in the province of Quebec and only one city, Montreal, reported vacancies for bush-

men. Some activity was noted in the clothing industry in Hull, but in Three Rivers there was a decrease in all manufacturing lines. In Montreal, quietness prevailed in the boot and shoe trades and in the rubber industry. Textiles and clothing were busy, but the revival of activity in metal trades, which was due to the re-opening of the Angus Shops, had declined somewhat, as these shops were closed for the holiday season. No outstanding change took place in building construction and quietness in this line prevailed generally throughout the province. In Montreal, the city unemployment relief work was nearing completion, with a corresponding reduction in the number employed, but sewer work continued, with the outlook favourable for more men to be taken on shortly. Trade, particularly at Montreal, was stimulated by Christmas and New Year buying. Although the number of women applicants had declined slightly at Montreal, while vacancies still continued numerous, elsewhere, much activity was noted in the household service group.

There has been little demand for farm help in the province of Ontario, and such orders as came in were easily filled by suitable applicants, even though wages in some instances were low. There was a fair call for pulpwood cutters as well as bushmen, although some of the logging camps at North Bay had reduced their gangs by 50 per cent. Preference for work by day, rather than by the piece, was shown by the men, as it was difficult to make wages in the latter instance, due to the low price offered. Little new help had been taken on at the mines for some time, but it was thought that more might be needed after the new year. Many industrial plants were closed over Christmas for varying periods, due to holidays and stocktaking, but were expecting to re-open early in the new year, although it was unlikely that staffs would be increased, or many new hands hired. Whatever activity was shown in building and construction consisted almost entirely of work on airports, or that furnished by various municipalities as a relief measure and given out on the rotation basis, in order that larger numbers of unemployed might benefit thereby. In the women's domestic section a steady demand for workers prevailed but in some cases at slightly reduced rates of wages.

A slight increase in the demand for farm help was noted in Manitoba, but this was largely due to the government farm relief plan. Distinct improvement was evident in the logging industry, but mining was quiet, and manu-

## MONTHLY STATISTICS REFLECTING INDUSTRIAL CONDITIONS IN CANADA

(Official statistics except where noted)

(7) Including lines east of Quebec.

(8) MacLean's Building Review.

facturing unchanged. Building construction was slack and there was no work, other than that of sewer or highway construction, or the clearing of land, which was being provided by the various municipalities as a relief measure. Retail trade was fairly active. A marked decline took place in the number of women day workers required, although the demand for regular domestic help remained steady.

Some activity was manifest in the placing of farm hands in the province of Saskatchewan, but these were sent out mostly under the farm relief scheme and in some districts it was reported that all the men eligible to participate in this plan had already been absorbed. There was little demand for loggers, nor was there any work being done in building construction, but mining showed improvement. Relief camps had been opened at several centres and some employment provided in the National Park. Little change was evident in the women's domestic section, where applicants were available for all positions, except a few of those requiring special qualifications.

The call for farm labour in Alberta was light and all orders easily filled. Conditions were slightly improved in logging, with a fair demand for bushmen. Practically all mines, especially in the vicinity of Edmonton, had full crews but were in no case working full time, owing to mild weather conditions. Manufacturing was quiet. Building construction showed no activity. Trade was somewhat better over the holidays, but collections were slow. Fewer calls were also received for women domestic workers.

There were no requests for farm help in the province of British Columbia and several of the logging camps and saw mills which had provided employment had ceased operations for an indefinite period. Herring fishing camps also were closed and would not likely re-open during the season. This industry, in previous years, gave employment to about 600 men for four or five months in the fall and winter. Mines were working part time only, with many men applying daily at the pit head. Building construction was slack. Concentration camps had been opened in various parts of the province, where the unemployed were looked after and work provided whenever possible. Some activity prevailed on the waterfront at New Westminster and at Vancouver, particularly with the movement of grain, but many experienced longshoremen were still on short time. Little work was being done at the drydock and shipyard at Prince Rupert, but several repair and overhaul jobs were expected to start early in the new year. Although some of the retail stores claimed they had a good trade in cheaper articles during the holidays, wholesale trade

was only fair, and retail trade was being stimulated by sales to tide over the after-Christmas slackness. Women domestics who had casual work over the holidays were re-registering at the offices and were willing to accept anything offered. Regular placements were few.

#### EMPLOYERS' REPORTS.

The seasonal losses reported at the beginning of December, 1932, were on a decidedly smaller scale than on the same date in 1931, and were also less than the average decline recorded during the last eleven years. Statements were tabulated by the Dominion Bureau of Statistics from 8,061 firms employing 765,441 persons, compared with 779,015 in the preceding month; the index (average, 1926=100), stood at 83.2 compared with 84.7 on November 1, 1932, and with 99.1 on December 1, 1931. On the same date in the ten preceding years the index was as follows: 1930, 108.5; 1929, 119.1; 1928, 116.7; 1927, 106.8; 1926, 102.3; 1925, 96.5; 1924, 91.9; 1923, 96.9; 1922, 96.3 and 1921, 88.3.

All five economic areas registered curtailment, the largest recessions taking place in the Western Provinces. In the Maritime Provinces, the seasonal reductions in employment occurred chiefly in construction, although manufacturing was also slacker. On the other hand, logging, coal-mining, shipping and retail trade showed improvement. In Quebec, construction declined, and there were also decreases in manufacturing, services and mining. Logging, transportation and trade, however, showed improvement; within the manufacturing group, gains were indicated in iron and steel works, due to the re-opening of large railway car shops shut down a few weeks previously. In Ontario, employment showed a moderate reduction; retail trade and logging registered marked seasonal increases, and considerable improvement was shown in iron and steel and tobacco and beverage factories, while the extension of unemployment relief undertakings provided work on the highways for a large number of extra persons. Other branches of manufacturing, transportation and building and railway construction reported large losses. In the Prairie Provinces also there was a further reduction in employment; retail trade, communications and logging were more active, but construction, manufacturing, transportation and mining registered declines, the losses in highway and railway construction being most pronounced. In British Columbia, manufacturing was dull, as were construction, transportation and mining.

Of the eight centres for which separate tabulations are made, Montreal and Windsor and the adjacent Border Cities showed im-

provement as compared with November, while lessened activity was reported in Quebec City, Toronto, Ottawa, Hamilton, Winnipeg and Vancouver. In Montreal, manufacturing showed heightened employment, largely due to the reopening of important railway car shops closed for some weeks. Tobacco factories also reported improvement; retail trade was seasonally active and employment increased about the port in preparation for the winter shutdown. On the other hand, construction registered considerable losses, and services were also slacker. In Quebec, there was a decrease, chiefly in manufacturing. In Toronto, retail trade recorded improvement, but textile, electrical apparatus and other manufacturing plants, transportation and construction were slacker. In Ottawa, moderate curtailment was indicated, chiefly in transportation and manufacturing. In Hamilton, a decline was reported, largely in manufacturing and highway construction. In Windsor and the adjacent Border Cities, there was an increase, mainly in iron and steel plants. In Winnipeg, an important reduction occurred in manufacturing, while other groups showed only slight changes. In Vancouver, manufacturing and construction showed curtailment.

A downward movement was shown in manufacturing on December 1, but the decline was rather less than the average recorded in the years 1921-1930. Tobacco, rubber and iron and steel works recorded heightened activity; the increase in the metal group was largely due to the re-opening of the railway car shops closed down a few weeks previously. On the other hand, losses were reported in other manufacturing establishments. Logging, trade and shipping registered considerable seasonal improvement, but mining, communications, steam railway and local transportation, services and construction and maintenance showed reductions, those in the last named being very extensive.

An article elsewhere in this issue gives in some detail the employment situation as at the beginning of December, 1932.

**TRADE UNION REPORTS.** At the close of November, 1932, reports were tabulated by the Department of Labour from 1,797 labour organizations, including a membership of 161,058 persons. Of these, 36,783 or a percentage of 22.8 were unemployed contrasted with percentages of 22.0 in October and 18.6 in November, 1931. Nova Scotia, New Brunswick, Alberta and Manitoba unions all reported better employment conditions than in October, the gains in the first two provinces named being the most substantial.

Improvement in the volume of work available to Nova Scotia coal miners was a large factor in the favourable situation reported from that province, while in New Brunswick the manufacturing industries, more especially the metal trades, were mainly responsible for the change. Alberta miners as in Nova Scotia indicated some employment advancement, the iron and steel trades in the same province showing heightened activity. Fractional improvement only was recorded by Manitoba unions. The most noteworthy declines in employment from October occurred in Saskatchewan where the manufacturing industries and steam railway operation showed curtailment, and in British Columbia dullness in building and construction operations were the main reason for the adverse situation reported. Conditions in Ontario were in addition, influenced largely by quietness in the building trades, activity in the manufacturing industries being also retarded. Quebec unions afforded the same volume of employment as in October, the percentage of inactivity remaining fairly high. The re-opening of railway car shops which had closed down during October favourably affected the attendant trades and industries in several provinces, though reduced time work continued to be in evidence. Compared with the situation in November, 1931, Nova Scotia unions alone reported a better employment volume, the gain being noteworthy and attributable to increased activity for coal miners. Of the declines in the other provinces the most extensive were registered by Ontario, Quebec and Alberta unions, the building trades in these provinces showing the most severe losses from November a year ago, though fair-sized recessions in activity were reported by New Brunswick and British Columbia unions.

Elsewhere in this issue will be found a report in greater detail, with tabular statements on unemployment at the close of November, 1932.

**EMPLOYMENT OFFICE REPORTS.** During the month of November, 1932, the offices of the Employment Service of Canada referred 28,854 workers to position and effected a total of 27,383 placements. Of these, the placements in regular employment were 14,182, of which 10,813 were of men and 3,369 of women. Placements in casual work numbered 13,201. Employers notified the Service of 28,683 vacancies, of which 22,262 were for men and 6,421 for women. Applications for work were received from 52,683 men and 12,482 women, a total of 65,165. An increase was shown in all transactions when the figures

were compared with those of the preceding month, but a decline was recorded in comparison with November, 1931, the reports for October, 1932, showing 23,222 vacancies offered, 56,877 applications made, and 22,205 placements effected, while in November, 1931, there were recorded 44,113 vacancies, 71,483 applications for work, and 43,326 placements in regular and casual employment. A report in detail of the work of the offices for the month of November, 1932, will be found elsewhere in this issue.

#### BUILDING PERMITS AND CONTRACTS AWARDED.

According to a report prepared by the Dominion Bureau of Statistics, the value of permits issued in 61 cities in Canada during November, 1932, was \$2,505,309, as compared with \$3,076,137 in the preceding month, and with \$7,282,117 in November, 1931.

The *MacLean Building Review* states that the total value of contracts awarded for construction in Canada during 1932, as compiled by MacLean Building Reports, Limited, amounted to \$132,872,400, which was the lowest level reached since 1918. Quebec led all the provinces with \$52,525,300, or 39.5 per cent of the Dominion total; Ontario was second with \$49,291,800, a decrease from 1931 of 60.7 per cent.

The value of construction awards throughout the Dominion during December is estimated by the *MacLean Building Review* at \$4,190,100. Of this total, \$2,133,900 was for engineering purposes \$1,192,400 was for residential buildings; \$754,300 was for business buildings and \$109,500 was for industrial purposes. The apportionment of the contracts awarded during December by provinces was as follows: Ontario, \$1,476,000; Quebec, \$1,248,400; British Columbia, \$875,000; New Brunswick, \$355,000; Nova Scotia, \$187,400; Manitoba, \$33,500; Alberta, \$9,500; Saskatchewan, \$5,300.

#### Production and Trade

Figures showing the volume of production in certain industries during recent months and also in the corresponding months last year are shown in the table on page 9.

The *Monthly Review of Business Statistics*, published by the Dominion Bureau of Statistics, states that the year 1932 was characterized by the continuance of the depression, the domestic financial background showing considerable betterment during the latter half. "The industries engaged in producing goods for direct consumption, notably clothing and food,

fared as is usual in depressions relatively better than groups devoted to the expansion of plant and equipment. The construction, iron and steel industries operated at a low percentage of capacity. While the output of the sugar, flour and textile industries was less than in 1931, the inelasticity of demand resulted in marked resistance to further reaction.

"The index of the physical volume of business maintained by the Bureau averaged 79.6 in the elapsed portion of 1932 compared with 93.5 in the preceding year. During the first part of the year the decline in business operations was severe, continuing the sharp contraction from 1929 to 1931. A combination of circumstances of a constructive character occurring about the mid-year led to an encouraging improvement in July. Subsequent declines offset the summer gains and a new low point in industrial activity was reached in October, adjustment being made throughout for seasonal tendencies.

"The trend of industrial employment, after the elimination of the seasonal factor, was somewhat similar to that of the physical volume of business as outlined above. The decline during the early months was relatively more severe than that indicated by the business index, the change in the method of dealing with unemployment relief having a marked bearing on the figures of employment in 1932. The sharp decline in the working forces engaged in construction compared with the more moderate recession in manufacturing plants indicates in part the effect of the altered method of dealing with governmental unemployment relief. The index of employment on the base of 1926 was 87.9 in 1932 compared with 102.5 in the preceding year."

*Coal.*—Canadian coal output in November amounted to 1,263,467 tons, a 17.6 per cent decline from the five-year average for the month of 1,532,919 tons. Bituminous coal production during the month totalled 729,244 tons, sub-bituminous coal, 59,137 tons, and lignite coal, 475,086 tons. Alberta mines produced 608,380 tons, a decrease of 1.5 per cent from the November, 1931, total of 617,716 tons. Nova Scotia's output of 375,415 tons was 2.4 per cent above the production in the corresponding month last year. Output from British Columbia mines totalled 129,318 tons as compared with 171,791 tons a year ago. Saskatchewan operators reported a production of 127,899 tons; in November, 1931, the output was 130,998 tons. New Brunswick mines produced 21,536 tons as against 14,339 tons a year ago. Coal imports into Canada declined 9.7 per cent to 1,508,202 tons from the November, 1927-1931, average of 1,670,947 tons. Anthracite coal imports totalled 342,989 tons, made

up of 197,696 tons from Great Britain, 126,027 tons from the United States, and 19,266 tons from Germany. From May to November Canada's anthracite requirements were drawn from the following sources: the United States, 42.5 per cent; Great Britain, 55.5 per cent; and Germany, 2.0 per cent. Importations of bituminous coal in November included 1,047,474 tons from the United States and 117,411 tons from Great Britain. Lignite coal imports during the month consisted of 27 tons brought into Manitoba and 301 tons into British Columbia. Exports of Canadian coal amounted to 33,255 tons or 51 per cent below the average for the month during the past five years of 67,956 tons. Prince Edward Island, Nova Scotia, New Brunswick, and Ontario ports cleared 20,081 tons, and Manitoba, Saskatchewan, Alberta and British Columbia ports 13,174 tons. The Canadian coal supply (computed on the basis of production plus imports less exports) in November was 2,738,414 tons, a decline of 12.7 per cent from the 1927-1931 average for November of 3,135,910 tons. November's supply included 342,989 tons of anthracite coal, 1,863,222 tons of bituminous coal, 59,137 tons of sub-bituminous coal, and 473,066 tons of lignite coal.

#### EXTERNAL TRADE.

A summary of Canadian trade in November, 1932, prepared by the Department of National Revenue, shows that the merchandise entering Canada for consumption amounted to \$37,769,047 as compared with \$37,094,525 in the preceding month and with \$46,911,012 in November, 1931. The chief imports in November, 1932, were: Non-metallic minerals and products, \$8,137,861; agricultural and vegetable products, mainly foods, \$5,851,493; fibres, textiles and textile products, \$5,449,633.

The merchandise exported from Canada during November, 1932, amounted to \$45,944,520, as compared with \$56,626,095 in the preceding month, and with \$57,486,950 in November, 1931. The chief exports in November, 1932, were: Agricultural and vegetable products, mainly foods, \$19,518,116; wood, wood products and paper, \$10,720,585; non-ferrous metals and their products, \$4,811,723.

#### Strikes and Lockouts

The time loss due to industrial disputes during December showed a substantial increase over that recorded for the previous month when no disputes of any magnitude occurred. The number of strikes and lockouts recorded was the same as that for November but the number of workers involved showed a substantial increase, due chiefly to a dispute in-

volving 1,200 coal miners at Reserve, N.S. As compared with December, 1931, although fewer strikes were recorded and a decline appeared in the time loss incurred, the number of workers involved was substantially higher, due also to the strike of coal miners mentioned above. There were in existence during the month twelve disputes, involving 2,375 workers, and resulting in a time loss of 10,378 working days, as compared with twelve disputes, involving 1,130 workers and resulting in a time loss of 3,653 working days in November, 1932. In December, 1931, there were on record fourteen disputes involving 1,258 workers and resulting in a time loss of 15,649 working days. At the end of the month there were on record five disputes involving approximately 250 workers. These figures do not include those strikes and lockouts in which employment conditions were no longer affected but which had not been formally called off by the unions involved.

#### Prices

The cost per week of a list of twenty-nine staple foods for an average family of five in terms of the average retail prices in sixty-nine cities showed a slight decline for the beginning of December at \$7.04, as compared with \$7.09 for November. Comparative figures for earlier dates are \$7.85 for December, 1931; \$10.10 for December, 1930; \$11.83 for December, 1929; \$10.39 for December, 1922; \$14.84 for December, 1920; \$16.92 for June, 1920 (the peak); and \$7.96 for December, 1914. The decline was due mainly to lower prices for meats, although the prices of butter, bread, flour, rolled oats and evaporated apples were also lower. A substantial seasonal advance occurred in the prices of eggs, while potatoes were also slightly higher. Including the cost of fuel and rent with that of foods the total budget averaged \$16.01 at the beginning of December as compared with \$16.10 for November; \$17.76 for December, 1931; \$20.46 for December, 1930; \$22.11 for December, 1929; \$20.97 for December, 1922; \$25.67 for December, 1920; \$26.92 for July, 1920 (the peak); and \$14.26 for December, 1914. Fuel was practically unchanged. Rent declined in several localities.

In wholesale prices the index number calculated by the Dominion Bureau of Statistics, based upon prices in 1926 as 100, was lower at 64.0 for December as compared with 64.8 for November; 70.3 for December, 1931; 77.7 for December, 1930; 96.0 for December, 1929; 98.0 for December, 1922; 164.3 for May, 1920 (the peak); and 66.4 for December, 1914. In the classification according to chief component materials five of the eight main groups declined, two advanced and one was unchanged. The groups which declined were:

the Vegetables and Vegetable Products group, due to decreases in the prices of barley, oats, wheat, corn, flour, bran and shorts which more than offset higher prices for flax and canned vegetables; the Animals and their Products group, because of lower prices for fish, hides, leather, steers, hogs, cured meats and eggs which more than offset advances in the prices of calves, lambs, fresh meats, milk and butter; the Wood, Wood Products and Paper group, mainly because of reduced quotations for lumber, lath and shingles; the Non-Ferrous Metals and their Products group, due to lower

prices for copper, copper wire bars, silver and tin which more than offset slightly higher prices for lead and zinc; and the Chemicals and Allied Products group, due to declines in the prices of shellac and potassium iodide. The Iron and its Products group and the Non-Metallic Minerals and their Products group advanced, the former mainly because of higher prices for steel tank plates and hot rolled and annealed steel sheets, and the latter due to advances in the prices of imported bituminous coal and sulphur. The Fibres, Textile and Textile Products group was unchanged.

### The Five-Day Week in American Industry in 1932

The extent of the 5-day week in American industry in 1932 is described in an article appearing in the *Monthly Labour Review* (Washington, D.C.) for November. The 5-day week as a permanent policy is stated to be now in force in 5.4 per cent of the establishments, with 8.4 per cent of the employees, which were covered by a comprehensive survey just completed by the United States Bureau of Labour Statistics. In manufacturing industries 12.3 per cent of the employees have been placed on a 5-day schedule, the automobile industry, with 67.2 per cent, having the largest proportionate number of employees under the plan. The questionnaires on which these results are based were answered by 44,025 establishments, having 3,848,394 employees, and representing 102 industries or industrial groups. A similar survey for 1931 showed that 2.4 per cent of the establishments reporting had permanently adopted the 5-day week for all or a part of their employees, and that 5.6 per cent of their employees had been placed on the schedule.

The 5-day week schedule, as adopted by the establishments covered, does not indicate uniformity as to the number of hours worked per week. In a number of cases the hours of the former sixth day are spread, either in whole or in part, over the new schedule of 5 days. In other cases, the establishments are operating on a 6 or even 7-day basis, but have so arranged their schedules that the individual employees work only on 5 days of the week.

The same publication also contains a summary of the annual survey of union wage rates and hours of labour in the "time-work" trades in 67 cities, made by the Bureau of Labour Statistics as of May, 1932. The agreement for a permanent basic 5-day week was found widespread in the building trades and to quite an extent in several of the other trades canvassed. In a few instances the agreement was that the provision for a week of five days, or even less,

was temporary in character, running for a fixed period or indefinitely until further agreement. Some of the curtailment of working hours reported, especially those for less than five days a week, was made to spread work among the members. The percentage given is not to be assumed as indicating in every instance a permanent status.

Of the full membership reported, 56 per cent had a recognized working week of 5 days or less, a small fraction of 1 per cent had a 5-day week or less for one-half of a year but less than a full year, and 3.1 per cent had a 5-day week for some part of the year less than one-half.

Intensive study is being given by the Department of Social Research, of McGill University, Montreal, to the subject of unemployment and related problems. Professor Leonard C. Marsh recently announced that eighteen graduate students are now at work on various aspects of the question, the various investigations covering the following subjects: employment and unemployment problems of the food and drink trades of Montreal; the Montreal labour market and the problems of unemployment re-adjustment; the employment history of discharged workers in Montreal; employment and social adjustment problems of the Slavic immigrant groups and among those of Germanic and Scandinavian origin; comparative standards of living among immigrant groups and their relation to employment adjustment; employment and unemployment problems of the cotton textile trades in Montreal, with special reference to technical development; types and extent of technological displacement in Montreal industries; employment stabilization in the iron and steel and allied industries; and the legal status of the employed and unemployed wage earner in Quebec and its social and economic implications.

## RECENT PROCEEDINGS UNDER THE INDUSTRIAL DISPUTES INVESTIGATION ACT

**A** BOARD of Conciliation and Investigation under the provisions of the Industrial Disputes Investigation Act was established by the Minister of Labour during December to deal with a dispute between the Canadian National Railways and certain of its employees being members of the Brotherhood of Locomotive Firemen and Enginemen. The point at issue relates to the perpetuation and application of the rule governing "regulation of mileage," including conditions under which demoted engineers may take and hold posi-

tions of firemen. The number of employees directly concerned is stated to be 4,500. The personnel of the Board is as follows:—the Honourable Mr. Justice A. Courtney Kingstone, of Toronto, chairman, appointed by the Minister in the absence of a joint recommendation from the other Board members, Messrs. F. Curzon Dobell, Advocate, of Montreal, P.Q., and W. F. Nickle, K.C., of Kingston, Ontario, nominees of the company and employees, respectively.

### Report of Board in Dispute Between Shipping Interests of Port of Saint John, N.B., and Their Longshoremen

The Board of Conciliation and Investigation which dealt with a dispute between various shipping interests of the port of Saint John, N.B., and certain of their employees being general longshore workers, coal handlers and trimmers, and shipliners, members of Locals 273, 810, and 1039, International Longshoremen's Association, presented its findings to the Minister of Labour in December. Wage reductions proposed by the employing companies were the cause of the dispute, 1,307 employees being directly affected. The Board was composed as follows: Colonel E. C. Weyman, of Saint John, N.B., chairman, appointed by the Minister of Labour in the absence of a joint recommendation from the other two members, Messrs. A. L. W. MacCallum, of Montreal, P.Q., and John Nicholas Small, of Saint John, N.B., nominees of the companies and employees, respectively. The report of the Board was signed by the chairman and Mr. MacCallum. Mr. Small did not concur in the Board's recommendations and submitted a minority report.

The recommendations of the Board, which in the main upheld the shipping companies' proposal to decrease wage rates ten cents an hour, were not accepted by the employees. Subsequently direct negotiations between the parties were renewed and an agreement was reached, the employees accepting the companies' compromise offer of a ten per cent reduction in wages.

The minority report contains certain assertions to which the chairman takes exception. With respect to the statement regarding the alleged failure of the Board to endeavour to promote conciliation, the chairman, Mr. Weyman, states that on several occasions at various stages of the investigation he canvassed the other members of the Board together, and

the member nominated by the employees separately, as to what could be done toward bringing the parties to the dispute into agreement, but with no indication of any prospect of success. He also states that the minutes of the Board signed "correct" by all three members record that at the afternoon sessions held on November 29 and 30 this matter was discussed by the Board, while the entire forenoon session of December 1, which was attended by the chief representatives of the employees and of the employers, was devoted to a special effort towards effecting conciliation; that again and again throughout the investigation he asked the other Board members for any suggestion that either could make as to mediation, and that neither at any time made any suggestion other than the plan unanimously reached for a conference during the morning session of December 1.

The chairman adds that, before the Board's report was submitted for signature, the part which refers to the efforts at conciliation was read over by all three members of the Board present together in session, and no comment, objection or suggestion whatever was made by the member nominated by the employees, whereas he did object to other portions of the report.

As to Mr. Small's reasons for requesting that the Board be reconvened, the chairman denies that he gave any such undertakings as referred to in paragraphs one and two and states that he cannot understand how any of his remarks could have been understood as set forth in the minority report; also that he considered the action suggested in paragraphs three and four to be unnecessary.

The text of the report of the Board and of the minority report is given below.

### Report of Board

*In the matter of the Industrial Disputes Investigation Act and of a dispute between various shipping interests of the port of Saint John, N.B. (Employer), and certain of their employees being general longshore workers, coal handlers and trimmers, and shipliners, members of Locals 273, 810, and 1039, International Longshoremen's Association (Employees).*

To the Honourable  
The Minister of Labour,  
Ottawa, Canada.

SIR,—The Board of Conciliation and Investigation established November 7, 1932, in the above matter and composed of Colonel E. C. Weyman, of Saint John, N.B., Chairman; Mr. John Nicholas Small, of Saint John, N.B., nominated by the employees; and Mr. A. L. W. MacCallum, of Montreal, P.Q., nominated by the employers, assembled in the city of Saint John, November 22, 1932.

The employers were represented by:—

Mr. David W. Ledingham, Mr. William A. Wainwright, and Mr. Walter T. Miller, for employers generally.

Mr. Wilfred L. Heeley, for Canadian Pacific Steamships, Ltd.

Mr. Frank P. Starr, for Dominion Coal Co., Ltd., and R. P. & W. F. Starr, Ltd.

Mr. O. P. Stensrud, for Dominion Coal Co., Ltd.

Mr. Harold C. Schofield, for Cunard Line.

The employees were represented by:—

Mr. James E. Tighe, Vice-Pres., I.L.A., for all employees.

Mr. David L. Reid, Pres., and Mr. Joseph Monteith, Sec., Local 273, I.L.A., for longshore workers.

Mr. Wendell P. Thorne, Pres., Mr. William K. McLeod, Sec., and Mr. James T. Steen, member, Local 1039, I.L.A., for shipliners.

Mr. John Frést, Pres., Mr. William Ward, Sec.-Treas., Mr. George W. Cook, Business Agent, and Mr. Peter McGinnis, member, Local 810, I.L.A., for coal handlers.

By three several written agreements dated October 27, 1931, the longshoremen, the shipliners and the coal handlers contracted with their employers for the rates of wages, working conditions and various other terms during their future employment. In accordance with one of the provisions thereof, the employers gave notice that the agreements would terminate on October 31, 1932.

The employers also offered to enter into a new agreement providing for a reduction in wages and certain other changes. This proposal was not accepted by the employees.

The employees then applied for this Board. The Board was established under and in accordance with the provision of the Industrial Disputes Investigation Act. And all members of the Board took the required oath of office.

The Board held nineteen sessions, commencing on the twenty-second day of November and ending on the third day of December instant. At ten of these sessions representatives of the employers and of the employees were present; at the other nine only the members of the Board and their secretary were present. The Board, in the same series of sessions thoroughly investigated the above-mentioned disputes. Various witnesses gave evidence under oath. And the Board has carefully perused the written briefs filed by the representatives of all parties to the disputes, and has heard what was alleged and urged by the representatives of the employees and by the representatives of the employers; and has carefully studied certain published reports of the Department of Labour and statistics published in the LABOUR GAZETTE.

The Board throughout the investigation gave especial care to the creation of an atmosphere and situation that might make it possible for the parties to the dispute to reach an agreement among themselves. One session with only the chief representative of each of the parties present was devoted entirely to that end and the situation frankly and thoroughly discussed and, at the request of the Board, these two representatives also conferred privately.

No agreement could seem to be reached. And it appeared to be the wish of all parties that the matter should be left to the Board to decide what should be done and to make its recommendations.

Accordingly the Board begs to submit its report as follows:—

The facts and considerations in the matter of the dispute between the longshore workers and their employers are so similar to the facts and considerations in the matter of the dispute between the shipliners and their employers, that both disputes may be conveniently dealt with together. But the facts and considerations in the dispute between the coal handlers and their employers are somewhat different, and this report will subsequently deal with the latter dispute separately.

#### I. *Re* DISPUTES BETWEEN LONGSHOREMEN AND SHIPLINERS, AND THEIR EMPLOYERS

The following are the facts admitted by all parties to the disputes, or established by evidence received by the Board.

1. The work engaged in by both parties is mostly a general import and export traffic and does not originate locally, nor is its final

destination local, and may be designated as a portion of the world trade.

2. The changes in volume of this trade, through the port of Saint John in recent years, are revealed by the following figures, showing a sharp and decided decline.

| Year                  | Imports | Exports   | Total Tonnage |
|-----------------------|---------|-----------|---------------|
| 1928.....             | 578,477 | 1,230,422 | 1,808,899     |
| 1929.....             | 592,591 | 1,150,723 | 1,743,314     |
| 1930.....             | 681,314 | 724,304   | 1,405,618     |
| 1931.....             | 596,596 | 684,081   | 1,280,677     |
| 1932 (11 months)..... | 476,344 | 445,890   | 922,234       |

3. Neither the employers nor their employees are in any way responsible for this decline in traffic, but it is due to world conditions, which neither can control, and work alike a hardship upon both.

4. Ocean freight rates from 1928 to the present time on exports have declined all the way from forty-five per cent to ten per cent, and on imports between fifteen and twenty-five per cent.

5. The employers in this trade are "having a hard time" financially. In most cases their operations are resulting in losses, in many cases serious. Only a few have kept their balances out of the red figures.

6. The aggregate earnings by the employees from their employment as longshoremen during the last twelve months was very much less than in preceding years; and the figures submitted to the Board indicated that their aggregate wages from this employment was not reasonably sufficient for maintaining their accustomed mode of living. Rates of wages per hour have remained the same but volume of work had decreased. The volume had also decreased somewhat in consequence of the Canadian Pacific last year introducing the use of motor tractors and trailers in place of hand trucks.

7. The cost of living index number in Canada, and the cost per week of a wage earner's family budget of staple foods, fuel and lighting, and rent, in terms of the average prices in sixty-nine cities of Canada, and the rates of wages paid to various waterfront labourers in the city of Saint John are shown in the following table (next column).

Calculations from the above table reveal that, since January, 1932, the wages from one hour's work at sixty cents per hour has been sufficient to purchase as much or more of the things one does purchase, as or than, the wages from one hour's work at seventy cents per hour could purchase at any time during

the five years prior to June 1, 1930. Since last April even less than sixty cents will purchase as much.

| Year    | Long-shore-men's wages per hour | Ship-liners' wages per hour | Coal handlers' wages per hour | Cost of wage earners' weekly budget in Sept. | Cost of living index number per Labour Gazette |
|---------|---------------------------------|-----------------------------|-------------------------------|--|--|
|         | cents                           | cents                       | cents                         | \$ cts.                                      |  |
| 1914... | 35                              |                             |                               | 14 33  | 103  |
| 1915... | 35                              |                             |                               |  | 107  |
| 1916... | 35                              |                             |                               | 15 01  | 124  |
| 1917... | 37½                             |                             |                               | 18 57  | 143  |
| 1918... | 45                              |                             | 70                            | 21 11  | 162  |

8. Productivity of labour. No evidence was adduced toward showing any variation in this factor during the last ten years. And in the absence of any such evidence it is taken as constant.

9. No evidence of any variation in any other factor that is usually taken into account in determining fair wages was presented to the Board or could be found by the Board.

10. The method of paying for work by the hour has been in force in the port of Saint John for many years, and the same method is in force in other Atlantic ports. No change in this method is desired by the longshoremen or by their employers.

11. The rates of wages, heretofore in force during the last twenty years or longer, have been determined by the usual bargaining contracts entered into and mutually agreed to by both employers and employees, and have not been adopted as the result of strikes, lockouts or any other violence.

The matters in dispute centered largely about three points.

A. Whether there should be any reduction in wages, and how much. The employers asked for a reduction of ten cents per hour.

B. When loading from hand trucks, to what extent should the gangs be increased if the employers have the option of increasing the sling loads.

C. What should be the minimum size of gang when loading from trailers hauled by motor tractors.

*A. Re Wages.*—The rate of wages having been fixed at a base of seventy cents per hour by mutual agreement made in October, 1927, the Board is of the opinion it may properly assume that seventy cents per hour was a fair rate of wages per hour at the time it was mutually agreed upon. The relations between the varying rates of wages in the preceding seven years and the varying cost of living index numbers during those preceding years approximated the relation between the seventy cent rate and the cost of living index in 1927. Sixty cents now has more purchasing power than seventy cents had in October, 1927, and therefore is a higher wage per hour than the seventy cents per hour rate was in 1927, unless there have, since 1927, intervened new factors affecting the situation.

(i) The employees urged that the serious decline in their aggregate wage per week, per month, per season and per year from this employment was a factor that affected the situation and demonstrated that the rate per hour should now be not less than seventy cents. This submission needs careful consideration and analysis.

An employee's aggregate wages per week, month, etc., (the rate per hour being fixed) depends entirely upon the number of hours he works. (The evidence presented to the Board indicated that in general during the last winterport season the men worked less than four hours per day on the average).

The rate per hour is fixed. The total number of labour hours may be taken as fixed, since it depends almost entirely upon the volume of traffic and the kind of commodities in that traffic, both of which are beyond the control of either of the parties. The other factor is the number of men engaged in performing that fixed number of labour hours.

So the real cause of the lower aggregate wages of each man per week, month, etc., has been—too small a volume of traffic and/or too many longshoremen sharing in handling that traffic.

The argument of the employees, therefore, amounts to this,—that the wage per hour should not be lowered for the reason that there are not enough labour hours, that is, the number of labour hours should control the rate of wages per hour. Were that a proper principle to apply then, if the aggregate labour hours were still further greatly reduced, the rate of wages per hour should be correspondingly increased, and conversely, if the aggregate of labour hours were greatly increased the rate of wages per hour should be correspondingly cut down. The Board is of the opinion that neither of these results would be

equitable, and therefore, that the aggregate number of labour hours does not and should not control the wage rate per hour.

(ii) The employees urged that a man's aggregate wages per week, month or year are not sufficient to maintain him and his family at a proper standard of living and therefore the rate of wages per hour should not be lowered. It was not argued that if a man had the opportunity of performing a reasonably full time number of labour hours that then he would still be unable to maintain a proper standard of life. The real cause then of his being unable to maintain a proper standard of living is this—he has not the chance to work, and actually does not work enough hours. Therefore, with reference to the matter before the Board, this is the same argument as above—that lack of labour hours should control the rate of wages per hour, and as stated above the Board is of the opinion that the aggregate number of labour hours does not and should not control the rate of wages per hour.

(iii) The employees urged that the rate of wages per hour should not be lowered because they now do a larger volume of work per hour, they now handle a larger tonnage per hour.

In this there are two considerations—the first is the work done by the men, i.e., the actual effort put forth by muscle and brain and co-ordination of the two. Do men now work faster or more slowly than formerly? Is the work heavier or lighter than formerly? Is it more or less fatiguing than formerly? On these points no evidence at all was submitted to the Board. Argument was made but no facts supporting the argument were proved or attempted to be proved by either the employers or the employees. And the Board has no reason for thinking that these employees work any harder or less hard than their fathers did before them, or that the productivity of their labour is either greater or less than that of their predecessors.

The second consideration is this. It is a fact that by reason of the present use of improved and new mechanical appliances, the employees do handle more tons per hour than formerly. Should they therefore have a higher wage per hour than if it were not used? These mechanical appliances are provided by the employers and their use and co-ordination organized by the employers. Their use may entail more physical and mental effort on the part of the employees or it may entail less. On this there was no evidence to support either view. The Board is, therefore, of opinion that this factor (if it be a factor at all) does

not affect the situation as to what is now a fair wage per hour compared with 1927.

(iv) The employees also urged that one of the things the country needs, to restore it to prosperity, is an increase, not a decrease, in purchasing power of its wage earners along with its other citizens, and that is a reason for not lowering the rate of wages per hour. There is one fact bearing on the point: Sixty cents now has more purchasing power than seventy cents had in 1927. Again, should it be desirable as a policy to artificially keep up or increase the purchasing power of the employees, who should stand that extra cost? No reasons have been advanced why the employers should stand this extra cost and the Board knows no reason. The Board is, therefore, of the opinion that the desirability of increasing purchasing power generally is no valid reason why it should decide that the rate of wages per hour in these instances should be higher than it would otherwise decide is fair.

(v) The Board has assumed that the seventy cent wage rate adopted by agreement in 1927 was a fair rate at the time it was adopted. It might, therefore, be argued that the same wage rate, seventy cents per hour, provided for in the agreements of October, 1931, was also a fair rate of wages per hour at that time. But this is not the opinion of the Board, reached after a study of the relationship of the rates of wages to the cost of living index numbers and of the other factors affecting the situation. In the autumn of 1931 employers and employees alike were in the midst of the uncertainties and changes then in the process of developing in this traffic and it was not realized to what extent traffic would decline, freight rates would decline, the cost of living index numbers would decline or the full length or extent of the depression conditions generally. The necessity of readjustments in rates of wages so as to bring them more in line with actual conditions and what business and industry ought fairly to pay and employees ought fairly to receive had not then been fully realized. All parties were desirous of striving their utmost to maintain the then-to-existing conditions, including the existing rates of wages. It also is apparent from a study of the relation between rates of wages and cost of living index numbers that alteration in the rates of wages, whether upwards or downwards, have had a distinct tendency to lag behind the events which made such changes necessary. There is also the special circumstance before the Board that the agreements while heretofore made from year to year are in fact made immediately before the winterport season, and largely for the purpose

of settling the rates for that short season of five months, and that they simply continue during the following slack summer season. In view of all these circumstances the Board is of the opinion that it ought not to assume that the wage rate per hour provided by the agreements of 1931 should be taken as conclusive of the fairness of the rate at that time.

(vi) The Board has been unable to find any other factor influencing the determination of the rates of wages that would have a tendency to increase the rate per hour or to maintain the rate above that asked for by the employers.

(vii) The employers are willing to pay the longshoremen sixty cents per hour for handling general cargo and seventy cents per hour for handling bulk cargo. The Board is of the opinion that these rates for longshoremen are as good, having in mind the present cost of living, as the rates provided for in the 1927 agreement under the cost of living conditions of that year and the two following years; and therefore the Board recommends that new agreements be entered into between the longshoremen and their employers providing for wages per hour at those rates.

(viii) To the shipliners, the employers have offered fifty-five cents per hour for day work. This is a greater reduction than is that contained in their offer to the longshoremen. No reason for this difference was advanced. The number of labour hours available to the shipliners in comparison with the number of labour hours available to the longshoremen is very small. The resulting saving to the employers consequent upon not equalizing the two offers is a mere bagatelle to the employers. It is true that fifty-five cents during the past summer and autumn months would purchase as much and slightly more than sixty-five cents would in 1927, but it is only slightly more and the margin very small. The Board, therefore, is of opinion that the employers might very well have offered to the shipliners a rate that entailed no greater reduction than the offer to the longshoremen. To treat both classes of labourers alike would require that the wage per hour paid to shipliners should be within a small fraction of fifty-six cents per hour for day work and the Board recommends that an agreement be entered into between the shipliners and their employers providing for wages at fifty-six cents per hour for day work and eighty-four cents per hour for night work.

*B. Re Sling Loads When Taken from Hand Trucks.*—Previous agreements have fixed a sort of standard size of sling load and a

standard minimum gang and all parties are agreed upon these provisions. During the last year, under the 1931 agreement, the employers when loading cargo had the option of increasing the sling load but, when they did, the gang had to be increased by at least two men. The object of the employers in wishing to increase the sling load is to speed up the loading operations. The longshoremen seek to have this clause in the 1931 agreement omitted from the proposed new agreement. The Board considers this is not, or should not, be a matter of pay. If it were, it should be dealt with by a special schedule providing a different rate of pay if that were fair. Neither party considers that is desirable. The Board considers it is a provision directed to securing proper working conditions only, and therefore this privilege of organizing his loading operations by increasing the sling load when deemed advisable should be allowed the employer. Rules only securing proper working conditions in such events should be included. The rule that when sling loads are increased men should be added to the gang, loading and stowing such sling loads, is satisfactory to all parties so long as the sling load is not increased too much. When, however, the sling load is increased by one-half the standard size, then the employees want four men added to the minimum gang. The employers urge so many additional men are not necessary in many cases. The Board gave a lot of consideration to the possibility of framing equitable rules to govern such cases. The difficulty encountered was the multiplicity of conditions the rule should cover, growing out of the various differences between one ship and another, the differences in commodities being loaded, and the differences in the kind of packages containing them. It also appeared that there have been no serious abuses for lack of such rules so far, nor have any abuses been of frequent occurrence. At other ports the agreements are silent on this point. Altogether the Board thought that there should be more experience with, and observation of, the working of this rather new practice to discover the bases and relationships upon which suitable and equitable rules could be framed, and recommends that no change in the rules be included in the proposed agreement attempting to cover this point.

*C. Re Minimum Gangs and Maximum Size of Sling Loads When Motor Tractors and Trailers are Used Instead of Hand Trucks.*—The employees desire that in such operations a larger minimum gang should be used. The

employers want it left open so that each gang may have over sixteen only the additional number of men that can advantageously be used. In this case too the difficulty is what rule or rules will be equitable and fair for the many many varying cases that daily occur. This method of loading and discharging is used only by the Canadian Pacific Steamships, Limited, at this port and has been in use here only during the last winter-port season. In the port of Montreal the same method has been in use two summer seasons—a total of about fourteen months, and there are no such rules in the longshoremen's agreements there regarding this point.

The Board tried its utmost to enable the longshoremen and their employers to mutually agree on some suitable rule or rules, but without success.

Advice from an experienced and impartial stevedore or other person of like experience gained from an extended observation of such work would be highly desirable before this Board could conclude that any such proposed rules are necessary at all, and then, as to how they should be framed.

The Board was not convinced that such rules are reasonably necessary for defining working conditions to safeguard the health, safety and well-being of the employees. In this particular the Board recommends no change, but that the clauses that were in the last agreement should be included in the next.

*D. Regarding Double Rates* per hour being paid for work on Sundays and holidays and at meal hours. This plan has been mutually agreeable and considered as fair by all parties to the agreements for many years. No strong reason for making any change at this time was advanced by the employers.

*E. Regarding Minimum Time* allowed when men are ordered out for work, the same is true. The plan seemed not to entail any hardship upon the employers. It ensures greater care in organizing the work, and that is all to the good.

The Board, therefore, recommends that the provisions in former contracts regarding double time and minimum time be included in the proposed new agreements.

*F. Re Shipliners' Work.*—The shipliners wished a new clause added to their agreement providing that "all sweeping and cleaning of shed after cargo" should be done by shipliners. They also strongly urged that shipliners are specialized skilled carpenters. The Board is of opinion that specialized

skilled carpenters should not necessarily be employed to sweep and clean up sheds after cargo, and receive shipliners' wages for such work; and recommends that such a clause should not be included in the proposed agreement.

The shipliners also wished a new clause added to the agreement providing that "all fittings in connection with stowing of cargoes" shall be done by shipliners. All parties informed the Board that most of this work is actually being done by shipliners or by long-shoremen, and that only one employer uses his full time employees to do this work when it is of a simple nature, really not requiring a carpenter but only a general workman who can saw or chop blocks and drive nails or spikes to secure the blocks. This kind of shoring does not appear to the Board to be the kind of work that reasonably requires a specialized skilled carpenter. Therefore, the Board is of the opinion that it should not recommend that such a new clause be added to the agreement.

Attached hereto are drafts of the provisions that should be in the proposed agreements embodying therein the terms which the Board in this report recommend and all the terms which are desired by one or other of the parties and are acceptable to both. In form the draft is nearly like previous contracts between the parties in accordance with the wish of both.

The Board further recommends that the proposed new agreement shall become effective just as soon as legally possible.

## II. RE DISPUTE BETWEEN COAL HANDLERS AND THEIR EMPLOYERS

The following are the facts admitted by all parties to the dispute or established by evidence received by the Board.

1. The work engaged in is almost entirely the importation of coal for the domestic market.

2. There has been no significant changes in the volume of these imports during the last four years.

3. Of the employer parties to the dispute, only two are much interested. (a) The Dominion Coal Co., Ltd., imports its coals at this port and markets them in a wholesale trade. (b) R. P. & W. F. Starr Ltd., import coal for their domestic retail trade. These two companies together import almost half of total coals imported at Saint John. The Dominion Coal Co., Ltd., alone imports over one-third of the total. It has its own docks fully equipped with modern unloading devices. Its aggregate payroll to the coal handlers is very much less per ton than in

the case of the other coal merchants. The remainder of the coal handlers' earnings are derived from the other coal merchants in Saint John who, excepting R. P. & W. F. Starr Ltd., are not parties to this dispute and together import slightly over half the total imports. Another fact is that Dominion Coal Co., Ltd., imports soft coals of a lesser value per ton than the hard coals.

4. The aggregate earnings by the coal handlers have not declined in the last four or five years but have remained fairly constant measured in dollars.

5. Calculations from cost of living index numbers quoted above in this report reveal that seventy cents will now purchase more than eighty cents in the years 1927 to 1930.

6. The other coal merchants in Saint John who are not parties to this dispute have agreements with the coal handlers which are identical in terms with the agreement dated October 27, 1931, between the same coal handlers and the employers who are parties to this dispute. And none of these other coal merchants have given notice to the coal handlers of the termination of those agreements.

A. *Wages.*—The chief matter in dispute is whether wages should be reduced from eighty cents per hour for day work to seventy cents per hour which the employers offer.

As in the matter of the other disputes and for the same reasons the Board assumes that eighty cents per hour was a fair rate of wages in 1927 when the rate was raised to that figure by the mutual agreement between the coal handlers and their employers. And for the same reasons as outlined earlier in this report the Board declined to assume that eighty cents per hour was a fair rate in October, 1931, when the last agreement between the parties was made. Seventy cents now has more purchasing power than eighty cents had in 1927 and, therefore, is a higher wage per hour than the eighty cents per hour rate was in 1927 unless there have, since 1927, intervened new factors affecting the situation.

None of the alleged factors affecting the situation which were urged upon the Board relating to the other disputes are applicable to this dispute excepting one—the desirability of maintaining or increasing purchasing power of the citizens generally as a policy directed to restoring prosperity. And that argument the Board as before does not consider should influence its decision as to the fairness of a rate of wages.

It was, however, strongly urged by the coal handlers that their rate of wages should not be less than eighty cents per hour because the other coal merchants are under contract

to pay that rate and are content to pay that rate. The evidence of the other coal merchants given before the Board was not very specific as to whether they were content because they considered the rate of wages fair or whether they were content because they had signed contracts and would honour their contracts. Some of those other coal merchants, who let us assume are content, also stated that they are able to pass on to their customers the cost of wages paid to the coal handlers. Others made unsatisfactory answers on this point and said the price to their customers was settled by competition. But this competition is between local merchants who are all in the same boat. One frankly said it made no difference about the rate so long as all the merchants were in the same position.

The retail coal merchants seem to be in the same position as the stevedore who gave evidence before the Board and stated it made no difference financially to him. He simply passed on to the merchants, with whom he contracted, the cost of the wages of the coal handlers he employed.

So the parties most interested in the reduction of the coal handlers' wages so far as the retail coal merchants are concerned seem to be their customers, none of whom was a party to this dispute or represented at all. With reference to the wholesale coal business that appears to be also true in so far as the customers are local retailers, but in so far as the customers are not local retailers it may not be true.

Under all these circumstances the Board is of opinion that the evidence given by these other coal merchants is a very unsafe guide to the Board as to what is a fair rate of wages independently of existing contracts. And the Board is of opinion that seventy cents per hour is not lower than a fair rate of wages per hour.

The employers who are parties to the dispute are willing to pay seventy cents per hour for day work and ninety cents per hour for night work and, therefore, the Board recommends that a new contract be entered into upon that basis.

*B. Minimum Time.*—The employers ask that the minimum time, for which a coal handler shall be paid, be fixed at one hour. Careful enquiry was made regarding the object and effect of this proposal. The rule heretofore in force has generally speaking been approximately satisfactory to all parties and this Board, as in the case of the other disputes, recommends no change but that the

existing rules be included in the next agreement.

*C. Re Rates for Overtime, Sundays and Holidays*—The employers asked for a change to provide for time and one-half instead of double time. For the same reasons as in the last preceding paragraph the Board recommends no change in these rules.

The Board has in mind that the immediate adoption of the foregoing recommendation regarding rates of wages may result in two rates of wages for the same kind of work in the port.

It may, therefore, be urged that the recommendation should not become effective before October 31, 1933, the date upon which the other coal dealers who have independent contracts for the present rates could terminate those contracts.

Uniformity in rates is highly desirable.

It is also desirable that a party who should be required to pay a certain rate of wages shall not be required to pay anymore. If, therefore, the employers who are parties to this dispute were required to pay more than the recommended seventy cents during the next eleven months they are thereby penalized by reason not of their own fault but by reason of someone else entering into a year to year contract and electing to give no notice of termination, or carelessly, or inadvertently permitting the notice day to pass without giving notice. This does not appeal to the Board as being fair.

The duty of this Board is to make up its own mind as to what is right and fair regarding the dispute referred to the Board by the parties concerned. Having made up its mind as to what is fair and just, it would appear to be a dangerous precedent to recommend the postponing of the going into operation of the fair and just rate simply because one of the parties thereto happens to have a more favourable rate for the same service with other third parties. After carefully considering the results that may ensue, notwithstanding the same, the Board is of the opinion and recommends that such new rate of wages herein above recommended should commence at as early a date as legally possible.

Attached hereto also is a draft of the provisions that should be in the proposed agreement between the coal handlers and their employers embodying the terms herein above recommended and also including the terms which one or other of the parties wish and are acceptable to the other. The form adheres to that heretofore used in accordance with the request of both.

During the course of the investigation, it was brought to the attention of the Board that a compromise offer had been made by the employers stipulating that it was made without prejudice, and that this compromise offer had not been accepted. Since this offer was made "without prejudice" the Board is of opinion that the fact that this offer was made has no bearing on the present dispute and the Board has treated it in that way. To do otherwise would tend to deter parties from making compromise offers, whereas such should be encouraged.

Dated this sixth day of December, 1932, at Saint John, New Brunswick, and

Respectfully submitted,

(Sgd.) EDWARD C. WEYMAN,  
Chairman and Member.

(Sgd.) A. L. W. MACCALLUM,  
Member.

I do not concur in the above report but dissent therefrom and beg to submit a minority report under separate cover.

(Sgd.) J. N. SMALL,  
Member.

#### RE LONGSHOREMEN'S PROPOSED AGREEMENT WITH THEIR EMPLOYERS

#### DRAFT of Provisions Recommended by the Board, and of Provisions Agreed to by both Parties

1. *The Rate of Wages* shall be sixty cents per hour day or night for handling general cargo, and seventy cents per hour day or night for handling bulk cargoes.

2. (a) *Same men shall not be ordered back* to work either day or night while other men are available, except when ship is within three hours of finishing or shifting from berth to berth when the same gangs shall carry on.

(b) If any gang is required to work through any meal hour, double time shall be allowed at the prevailing rate of wages for such meal hour, and for such time thereafter until relieved.

3. *Nine hours* shall constitute a day's or night's work.

4. *Minimum Time*:—(a) For rigging and unrigging of gear, hauling of staging and handling hatches, the men shall be paid from time ordered out, but not less than two hours pay at the prevailing rate.

(b) For handling ship's lines, when docking or shifting ship, men shall be paid from time ordered out, but not less than two hours at single rate during week days at all times, and two hours double time on Sundays and holidays at all times.

5. (a) *Day Work*.—Two hours' pay shall be allowed when men are ordered out for day work except when ship's representative decides weather conditions prevent working. When gangs have worked during the morning and the same gangs resume work at 1 p.m. and there-

after are knocked off on account of weather conditions, or on account of ship finishing, they shall be paid for actual time worked from 1 p.m.

(b) *Night Work*.—When men are ordered out for 7 p.m. they shall be paid for a minimum of two hours. When gangs who have stopped working at midnight resume work at 1 a.m. and thereafter are knocked off on account of weather conditions or on account of ship finishing, they shall be paid for actual time worked after 1 a.m. but not less than for two hours (in case of finishing ship, time being reckoned for each gang until its hatch is finished).

(c) *Saturday Night Work*.—Subject to Section 7 (d), when gangs are ordered out on Saturday night they shall be paid a full night's pay until regular knocking-off time except when ship is finishing, in which case each gang shall be paid until their hatch is completed, but not less than two hours. If one or more gangs are required to work through beyond knocking-off time in order to finish ship, they shall be paid at the prevailing rate. On Saturday night if men are knocked off before 11 p.m. on account of weather conditions (which term includes weather conditions causing delay in arrival of the vessel for which men are called out) the men shall be paid until knocked off, but for not less than two hours.

(d) *Sunday Finishing*.—In the case of a ship finishing on Saturday night, and weather conditions prevent working, same men may be ordered back for 7 a.m. Sunday.

(e) *Ordering Out Hours*.—Orders for men to commence work at 7 a.m. shall be given at or before 5 p.m. on the day previous.

If required at 9 a.m. orders shall be given at or before 8 a.m.

If required at 1 p.m. orders shall be given before 11 a.m.

If required at 7 p.m. orders shall be given at or before 4.30 p.m.

(f) *Meal Hours* are from 5 a.m. to 7 a.m.; noon to 1 p.m.; 5 p.m. to 7 p.m., and midnight to 1 a.m.

6. *Cancellation*.—All gangs, when ordered shall not be subject to cancellation except as provided by Section 16.

7. (a) *Sundays, Holidays, Etc.*—Double time at the prevailing rate of wages if men are required to work on Sundays, or the following holidays—Dominion Day, New Year's Day, Good Friday, Christmas Day, Victoria Day, King's Birthday and that these Sundays and Holidays shall constitute twenty four hours from midnight to midnight.

(b) Should any of these holidays fall on a Sunday and the following Monday be declared a holiday by the Government such Monday shall be considered a holiday under this Section.

(c) Saturday half holiday shall prevail from June 1 to September 30, but men shall work during such half holiday, if required. Double time rates shall prevail from 1 p.m. Saturday to midnight Sunday.

(d) Mails, baggage and express carried by mail or passenger ships shall be handled at all times at the prevailing rate of wage. Time shall count from the time men are ordered to report for work but not less than two hours. Orders to gangs shall be given at ordering out hours stipulated in Section 5 (e).

8. *Labour Day*.—No work shall be performed on Labour Day, except handling mails, baggage and express as per Section 7 (d) when double time shall be paid.

9. *Extra Pay*.—Ten (10) cents per hour extra shall be paid for wet hides in bundles, acid phosphate, and tankage in bags.

10. (a) *Deal Boat* shall mean any ship loading only lumber after the discharge of her cargo.

(b) *Cargo Boat* shall mean any ship taking general cargo and lumber, or without lumber.

(c) *Timber Boat* shall mean any ship whose cargo discharged at Saint John consists of ninety per cent or more of lumber; and fourteen men shall constitute a gang. Where the ship or stevedore controls staking extra long-shoremen per gang as required shall be employed.

11. *Gangs*.—Fifteen (15) men shall constitute a gang for loading and discharging sugar at the refinery. Sixteen (16) men shall constitute a gang for loading or discharging general cargo.

In the case of deal boats the number of men per gang shall not be less than twelve (12) except when working two winches at a hatch—then an extra man shall be employed making thirteen (13) in deal gang. Not less than six (6) men shall be employed in the hold of a deal boat when loading lumber out of lighters or cars.

12. *No Man shall Stay in the Hold* of any ship or vessel while grain is running.

13. *All Orders to the Men* shall be issued through their gang foremen.

14. *All Freight when Trucked Outside* between sheds shall have two men on truck.

15. *Pay Days*.—All companies shall start paying the men as soon after 1 p.m. on Saturday as possible during the winter months, payrolls shall be made up to Friday at 5 p.m. Between May 1 and October 31 all companies shall start paying the men at 10.30 a.m., payrolls shall be made up to Saturday at 5 a.m.

16. *Confirmation Orders*.—Longshoremen agree to have a man stationed in their office between 4.15 p.m. and 5 p.m. on Sundays for the purpose of receiving confirmatory orders for gangs required for Sunday night or Monday morning for which they have received advanced notice before 5 p.m. on Saturdays. This clause shall apply during the months of December, January, February, March and April to all ships whether in port or due to arrive, and during other months only to ships due to arrive.

17. *Disputes*.—Should there be any dispute, which can not be adjusted between the parties hereto, as to the interpretation of any of the clauses of this agreement, the men shall continue to work and such dispute shall be referred to a committee consisting of three members, one selected by the companies, one by the longshoremen and a chairman selected jointly by the other two. Such committee shall sit without any unnecessary delay, and a majority decision shall be final and binding on both parties.

18. This Agreement and Schedule of working conditions will come into force on and continue in force until the end of October, 1933, and thereafter from year to year unless or until either party thereto on or before the first day of October in any year serves written

notice upon the other party thereto that the agreement will terminate.

19. Schedule of working conditions is appended hereto and forms part of this agreement.

In witness whereof the parties have signed.

**SCHEDULE OF WORKING CONDITIONS for the handling of cargo at the Port of Saint John, N.B., referred to as Section 19 in the Agreement.**

Pine and/or spruce deals, per sling 14 pieces 3-inch.

Pine and/or spruce deals, per sling 16 pieces 2-inch.

Where spruce and/or pine scantlings or deals shall be slung together, not less than equivalent of fourteen (14) of three-inch deals.

Pine and/or spruce 1-inch, 31 pieces per sling.

Pine and/or spruce scantlings, 20 pieces per sling.

Pine and/or spruce deal ends, 30 pieces per sling.

Sawn birch per sling, 8 pieces 4-inch.

Sawn birch per sling, 10 pieces 3-inch.

Sawn birch per sling, 15 pieces 2-inch.

Sawn birch per sling, 20 pieces 1-inch.

Not less than 12 men in gang.

Laths per sling, 20 bundles of 100 laths per bundle, 40 bundles of 50 laths per bundle.

Flour, 280-lb. sacks, 5 per sling, 2 per truck.

Flour, 196-lb. sacks, 6 per sling, 3 per truck.

Flour, 140-lb. sacks, 10 per sling, 5 per truck.

Flour, 112-lb. sacks, 12 per sling, 6 per truck.

Flour, 98-lb. sacks, 15 per sling, 5 per truck (loading).

Flour, 98-lb. sacks, 10 per sling, 10 per truck (discharging).

2 men per truck.

Pig iron, large, 10 pieces per sling, 10 pieces per truck.

Pig iron, small, 15 pieces per sling, 15 pieces per truck.

Salt, 187-lb. sacks, 5 sacks per sling, 5 per truck.

Salt, 140-lb. sacks, 6 sacks per sling, 6 per truck.

When stacked in shed or when stacked outside of shed, 2 men per truck.

When discharged and stowed into decked vessels—Salt, 187-lb. sacks, 7 per sling, and not less than six (6) men in steamer's hold to sling same. Salt, 140-lb. sacks, 8 per sling, not less than six (6) men in steamer's hold to sling same, and when discharged into open scows 10 sacks per sling and not less than six (6) men in steamer's hold to sling same.

Coal in bags discharged to shed or stacked outside—182-lb. sacks, 5 per sling, 5 per truck, 2 men per truck; 154-lb. sacks, 6 per sling, 6 per truck, 2 men per truck.

When discharged and stowed into decked vessels, 7 bags per sling; when discharged into open scows, 9 bags per sling, and not less than (6) men in steamer's hold to sling same.

Oil cake, in bags, 6 per sling, 3 per truck.

Oil cake, in bales, 4 per sling, 2 per truck.

Axles, large, 1 per sling, 1 per truck.

Axles, small, 2 per sling, 2 per truck.

Car rims: one shall constitute a sling whether large or small, when being trucked from hatch, but when sliding down gangway or striking over side, two small per sling, one per truck.

Apples, in barrels, 6 per sling, 3 per truck.

Potatoes in barrels, 6 per sling, 3 per truck.

Potatoes, 180-lb. bags, 6 per sling, 3 per truck.

Potatoes, 150-lb. bags, 6 per sling, 3 per truck.

Potatoes, 90-lb. bags, 10 per sling, 5 per truck.  
Raw sugar in bags:

At Atlantic Sugar Refineries: 320-lb. bags, 5 per sling; 250-lb. bags, 5 per sling; 200-lb. or under, 6 per sling.

At all other wharves: 320-lb. bags, 4 per sling, 4 per truck, 2 men per truck; 250-lb. bags, 4 per sling, 4 per truck, 2 men per truck; 200-lb. bags or under, 5 per sling, 5 per truck, 2 men per truck.

Rolls of paper, 900 lbs. or over, 1 roll per sling.  
Hay, 6 bales per sling.

When cargo in bags is being piled in shed or outside shed over 5 bags high, extra men shall be employed, except in the case of storage cargo, where storage is not controlled by steamship company.

When discharging cargo directly to trucks no truck load shall exceed 1,100 lbs. of cargo with 2 men on truck.

When using handtrucks, with a gang of sixteen men, no sling (loading) shall exceed 1,400 lbs. except at refineries or in the case of single pieces.

It is understood and agreed that the numbers of pieces or packages to the sling mentioned herein are based on the number of men to the gang specified in Clauses 10 and 11 of the Agreement, but that the companies and/or their representatives have the right to increase the sling-load at any time, and, in such event, shall be the judge of the number of extra men needed. This provision shall not apply to sugar at the refineries.

Wherever a slingload or truck load is mentioned herein, it is agreed that the load applies only to operations where handtrucks are used, and not to operations where mechanical trucks and/or trailers are used. Where mechanical trucks and/or trailers are used the minimum number of men to the gang shall be 16 for working general cargo.

Extra men in the gang can be transferred from one gang to another on the same ship as required.

#### *Re SHIPLINERS' AGREEMENT WITH THEIR EMPLOYERS*

##### *DRAFT of Provisions recommended by the Board and Provisions agreed upon by both parties.*

1. Nine hours shall constitute a day's or night's work.

2. Shipliners agree to supply the necessary men under their jurisdiction to perform the work of shipliners during the term of this agreement.

3. The working hours shall be from 7 a.m. to 12 noon, and from 1 p. m. till 5 p.m., at the rate of fifty-six cents (56c.) an hour, and from 7 p.m. until 12 midnight and from 1 a.m. until 5 a.m. at the rate of eighty-four cents (84c.) an hour for night work.

4. Double time at the prevailing rate to be paid for Sunday work and the following holidays: Dominion Day, Christmas Day, New Year's Day, Good Friday, and these holidays shall constitute 24 hours from midnight to midnight. Night work on said Sundays and holidays at double time and one-half. Should any of these holidays fall on a Sunday and the following Monday be declared a holiday by the Government, such Monday to be considered a holiday.

5. No work to be performed on Labour Day.

6. If men are required to work at repairing oil or water tanks on board vessels which have no hatch and must be entered by way of a man-hole, they shall receive double time at the prevailing rate.

7. When men are ordered out for work, day or night, two hours pay shall be allowed from the time ordered excepting when weather conditions prevent working. They shall be ordered for 7 a.m. and 9 a.m. and 1 o'clock p.m., and orders for 7 p.m. shall be received on or before 4 p.m.

8. If men are required to work during any meal hour they shall receive double time for such hour and each succeeding hour until relieved. Meal hours shall be from 12 midnight till 1 a.m., 5 a.m. until 7 a.m., 12 noon until 1 p.m., and 5 p.m. until 7 p.m.

9. When men are ordered out to work on a ship in the stream, they are to receive full time until put ashore again in the vicinity of the dock from which they set out.

10. All time and expenses shall be paid men when transferred from one job to another during working hours.

11. All orders to the men must be issued through their respective foremen.

12. Ships to have option of cleaning holds and bilges, and laying of limbers with members of their own crews. In the case of a ship loading grain, on completion of discharge of holds, longshoremen may be employed in cleaning holds and bilges for balance of a working period, after which members of Local 1039 shall be employed to complete job. If steamers are partly fitted by members of crews prior to arrival, shipliners to complete work without any dispute. All battening of limbers to be done by members of Local 1039 I.L.A.

13. Should there be any dispute, which cannot be adjusted between the parties hereto, as to the interpretation of any of the clauses of this agreement, the men shall continue to work and such dispute shall be referred to a Committee consisting of three members, one selected by the companies, one by the shipliners and a Chairman selected jointly by the other two. Such Committee shall sit without any unnecessary delay and a majority decision shall be final and binding on both parties.

14. The Shipliners' Union will not try to uphold incompetency, shirking of or absence from work, pilfering or broaching of cargo.

15. This Agreement is to become effective on ..... and to continue in force until the end of October, 1933, and thereafter from year to year unless or until either party thereto on or before the first day of October in any year serves written notice upon the other party thereto that the agreement will terminate.

#### *Re COAL HANDLERS' AND TRIMMERS' AGREEMENT WITH THEIR EMPLOYERS*

##### *DRAFT of Provisions recommended by the Board and Provisions agreed upon by both parties.*

1. All men employed shall be members of the Coal Handlers' Union, No. 810 I.L.A. If it is impossible to obtain sufficient men belonging to Local No. 810 I.L.A. non-union men may be employed until union men are available. As soon as union men become available the maximum time non-union men can continue work shall be half a shift.

2. The rate of pay shall be seventy cents (70c.) per hour for day work and ninety cents (90c.) per hour for night work.

3. All work performed under steam shall call for not less than eight (8) men working on four (4) tubs now in general use. When discharging schooners with tubs not exceeding 600 pounds, six (6) men to be employed. With tubs exceeding 600 pounds eight (8) men on four (4) tubs to be employed.

4. Waiting time shall be paid for at full rate for first hour, and half rate for succeeding hours.

5. When work is suspended for want of cars or any other cause, the rate of pay shall be the same as stipulated for waiting time in Section 4, except in the case of stress of weather, when men shall be paid for actual time worked.

6. Work done on Sundays, Christmas Day, New Year's Day, Good Friday, the 24th of May, Dominion Day, and Thanksgiving Day shall be paid for at double rate. Should any of these holidays fall on a Sunday, and the following Monday declared a holiday by the Federal Government, such Monday shall be considered a holiday under this section. Positively no work shall be performed on Labour Day. If men are required to work on Saturdays from 1 p.m. to 12 midnight between June 1st and September 30th, both inclusive, they shall be paid at double time rate. During that period men to be paid as near 1 p.m. as possible.

7. When men are taken away from the docks or wharves for work on scows, schooners or steamers or other vessel anchored in the stream, or breasted off from the docks or wharves, they shall be paid from the time they leave the dock or wharf until they return to a dock or wharf in that vicinity; or if the men are taken from one unfinished job to another, full time is to be paid until the work for the day is completed, or the job finished.

8. The day shift will commence at 7 a.m., and finish at 5 p.m. Meal hour to be 12 midday to 1 p.m. Night work will commence at 7 p.m. and finish at 5 a.m. Meal hour to be from 12 midnight till 1 a.m.

9. When men are ordered or start for the day shift, they shall receive a minimum of two hours' pay. When men are ordered or start to work for the night shift, and work ceases at or before midnight, they shall be paid for actual time worked, but not less than two hours. If the work continues at 1 a.m. or after that time and ceases before 5 a.m. full time shall be paid from 1 a.m. until 5 a.m., except when work is discontinued through stress of weather. 11.30 p.m. shall constitute a half night on West Side. When men are ordered for the night shift and are not put to work at 7 p.m. they shall receive not less than two hours' pay.

10. All day work over the hour to the half hour to be booked as half an hour, and the day work past the half hour to be booked as a full hour. This refers to the completion of the job except where otherwise noted.

11. All work performed during the hours between midday and 1 p.m., 5 p.m. and 7 p.m., 12 midnight and 1 a.m., 5 a.m. and 7 a.m., shall be paid for at double time at the prevailing rate for the day or night until relieved.

12. All coal loaded direct from cars to ship, barge or scow, or from ship, barge or scow direct to cars, the work shall be performed by

union men, members of Local No. 810, I.L.A., strictly in accordance with Section 1 of this agreement.

13. All foremen must be members of the Coal Handlers' Union No. 810, I.L.A.; all men to be hired by the said foremen strictly in accordance with Section 1.

14. Should there be any dispute which cannot be adjusted between the parties hereto, as to the interpretation of any of the clauses of this agreement, the men shall continue to work and such dispute shall be referred to a Committee consisting of three members, one selected by the companies, one by the coal handlers, and a Chairman selected jointly by the other two. Such Committee shall sit without any unnecessary delay, and a majority decision shall be final and binding on both parties.

15. This Agreement is to become effective on ..... and to continue in force until the end of October, 1933, and thereafter from year to year unless or until either party thereto on or before the first day of October in any year serves written notice upon the other party thereto that the agreement will terminate.

### Minority Report

To the Honourable,  
The Minister of Labour,  
Ottawa, Canada.

SIR,—The Board of Conciliation and Investigation established November 7, 1932, in the above matter and composed of Colonel E. C. Weyman, of Saint John, N.B., chairman; Mr. John Nicholas Small, of Saint John, N.B., nominated by the employees; and Mr. A. L. W. MacCallum, of Montreal, P.Q., nominated by the employers, assembled in the city of Saint John, November 22, 1932.

The employers were represented by:—

Mr. David W. Ledingham, Mr. William A. Wainwright, and Mr. Walter T. Miller, for Employers generally.

Mr. Wilfred L. Heeley, for Canadian Pacific Steamships, Ltd.

Mr. Frank P. Starr, for Dominion Coal Co., Ltd., and R. P. & W. F. Starr.

Mr. O. P. Stensrud, for Dominion Coal Co., Ltd.

Mr. Harold C. Schofield, for Cunard Line.

The employees were represented by:—

Mr. James E. Tighe, Vice-Pres., I.L.A., for all employees.

Mr. David L. Reid, Pres., and Mr. Joseph Monteith, Sec., Local 273, I.L.A., for longshore workers.

Mr. Wendall P. Thorne, Pres., Mr. William K. McLeod, Sec., and Mr. James T. Steen, member, Local 1039, I.L.A., for shipliners.

Mr. John Frost, Pres., Mr. William Ward, Sec.-Treas., Mr. George W. Cook, Business Agent, and Mr. Peter McGinnis, Member, Local 810, I.L.A., for coal handlers.

By three several written agreements dated October 27, 1931, the longshoremen, the ship-liners and the coal handlers contracted with their employers for the rates of wages, working conditions and various other terms during their future employment. In accordance with one of the provisions thereof, the employers gave notice that the agreements would terminate on October 31, 1932.

The employers also offered to enter into a new agreement providing for a reduction in wages and certain other changes. This proposal was not accepted by the employees.

The employees then applied for this Board. The Board was established under and in accordance with the provision of the Industrial Disputes Investigation Act. And all members of the Board took the required oath of office.

The Board held twenty sessions, commencing on the twenty-second day of November and ending on the seventh day of December instant. At ten of these sessions representatives of the employers and of the employees were present; at the other ten only the members of the Board and their secretary were present. Various witnesses gave evidence under oath. And the Board carefully perused the written briefs filed by the representatives of all parties to the disputes, and has heard what was alleged and urged by the representatives of the employees and by the representatives of the employers; and has studied certain published reports of the Department of Labour, and statistics published in the LABOUR GAZETTE, but the report fails to refer to the sworn pay-rolls of four of the steamship companies for eleven months, which will be noted later in my report.

During the entire investigation of the dispute the Board on only one occasion gave permission to the chief representatives of each party time to discuss the situation and see if an agreement could be arrived at, and on no other occasion made any effort to have the matter adjusted by having the representatives meet, which in my opinion should have been done at different times during the investigation.

The majority of the Board having rendered its report, in which I cannot concur, I, therefore, beg to submit the minority report as follows:

The facts and considerations in the matter of the dispute between the longshore workers and their employers are similar to the facts and considerations in the matter of the dispute between the shipliners and their employers, so that both disputes may be conveniently dealt with together. But the facts and considerations in the dispute between the coal handlers and their employers are somewhat different,

and my report will hereafter deal with the latter dispute separately.

### *Re Disputes Between Longshoremen and Shipliners and Their Employers*

The following are the facts admitted by all parties to the disputes, or established by evidence received by the Board.

The work engaged in by both parties is mostly a general import and export traffic and does not originate locally, nor is its final destination local, and may be designated as a portion of the world trade.

The changes in volume of trade have been referred to in the majority report of the Board on page 4, paragraph 2,\* and I would like to add to this that there was a considerable difference in the total tonnage as presented to the Board by Mr. F. P. Starr and the Chairman of the Harbour Commission of the city of Saint John.

Neither the employers nor their employees are in any way responsible for this decline in traffic, but it is due to world conditions, which neither can control, and which work alike a hardship upon both. But the question was asked the shipping men to what extent do they attribute the part of their total loss in the port of Saint John on the part of the water front workers and they answered two and a half to three per cent, and in the face of this they now ask the different organizations to accept from twelve and a half to fifteen and a half per cent deduction of wages.

The employers in this trade are "having a hard time" financially. In most cases their operations are resulting in losses, in many cases serious. Only a few have kept their balances out of the red figures. But it was agreed that the loss was more serious to the men, which has not been taken into consideration by the drafting of the majority report.

The aggregate earnings of the employees from their employment as longshoremen during the last twelve months was very much less than in preceding years; and the figures submitted to the Board indicated that their aggregate wages from this employment was not reasonably sufficient for maintaining their accustomed mode of living. Rates of wages per hour have remained the same but volume of work has decreased. The volume has also decreased somewhat in consequence of the Canadian Pacific last year introducing the use of motor tractors and trailers in place of hand trucks.

\* Paragraph 2, page 17 of LABOUR GAZETTE.

The majority report refers to the cost of living index number in Canada, etc.; this will be noticed in paragraph seven, page five,\* and also will be noticed the table as set forth on page six† (but the majority's report failed to add to this table that it does not include insurance, medical care, recreation, school tuition, etc.), which must be taken into consideration, and further the report failed to publish the sworn payroll of the River and Ocean Stevedoring Company, H. S. Gregory & Sons, Furness, Withy & Co., Limited, and the Canadian Pacific Steamships, which is as follows:—

RIVER AND OCEAN STEVEDORING CO. (Nov., 1931, to Oct., 1932)

| No. |              |          |
|-----|--------------|----------|

| 3   | " .. . . .   | 455 37   |
| 4   | " .. . . .   | 600 82   |

CANADIAN PACIFIC STEAMSHIPS

| No. |          |          |
|-----|----------|----------|
| 1.  | .. . . . | \$309 70 |
| 2.  | .. . . . | 307 35   |
| 3.  | .. . . . | 308 37   |
| 4.  | .. . . . | 309 55   |
| 5.  | .. . . . | 307 54   |
| 6.  | .. . . . | 308 45   |
| 7.  | .. . . . | 281 19   |
| 8.  | .. . . . | 275 01   |
| 9.  | .. . . . | 279 19   |
| 10. | .. . . . | 283 55   |
| 11. | .. . . . | 284 40   |
| 12. | .. . . . | 284 17   |
| 13. | .. . . . | 266 83   |
| 14. | .. . . . | 267 55   |
| 15. | .. . . . | 272 87   |
| 16. | .. . . . | 276 67   |
| 17. | .. . . . | 272 31   |
| 18. | .. . . . | 267 45   |
| 19. | .. . . . | 237 74   |
| 20. | .. . . . | 245 60   |
| 21. | .. . . . | 243 00   |
| 22. | .. . . . | 239 75   |
| 23. | .. . . . | 237 76   |
| 24. | .. . . . | 243 00   |

It will be noted from the above table that only two gangs made more than \$16.34, which would be 32 men out of a total of 900.

Regarding productivity of labour, I might say that evidence was presented to the Board to show that the longshoremen in the city of Saint John are giving tonnage far in excess of previous years.

The method of paying for work by the hour has been in force in the port of Saint John for many years, and the same method is in force in other Atlantic ports. No change in this method is desired by the longshoremen or by their employers.

The rates of wages, heretofore in force during the last twenty years or longer, have been determined by the usual bargaining contracts entered into and mutually agreed to by both employers and employees, and have not been adopted as the result of strikes, lockouts, or any other violence.

The matters in dispute centered largely about three points:

(1) Whether there should be any reduction in wages, and how much. The employers asked for a reduction of ten cents per hour.

(2) When loading from hand trucks, to what extent should the gangs be increased if the employers have the option of increasing the sling loads.

(3) What should be the minimum size of gang when loading from trailers hauled by motor tractors.

The rate of wages was fixed at a base of 70 cents per hour by mutual agreement in October, 1927, and from the table submitted by the majority report and the table of wages as submitted by me, it will be noted that there is no difference in the purchasing power between 70 cents in 1927 and the 70 cents asked for at the present time, if the average earning of the gangs is taken into consideration.

The employees urged that the serious decline in their aggregate wage per week, per month, per season and per year from this employment was a factor that affected the situation and demonstrated that the rate per hour should now be not less than seventy cents.

It is true that the employee's aggregate wages per week, month, etc., (the rate per hour being fixed) depend entirely upon the number of hours he works, but at no time during the investigation was evidence presented to the Board that in the last winterport season the men worked less than four hours per day on the average. The only evidence offered in this respect was the sworn statement of payrolls as mentioned before in my report.

The rate per hour is fixed. The total number of labour hours may be taken as fixed, since it depends almost entirely upon the

\* Paragraph 7, page 17 of LABOUR GAZETTE.

† Page 17 of LABOUR GAZETTE.

volume of traffic and the kind of commodities in that traffic, both of which are beyond the control of either of the parties. Here I wish to state that it is necessary to maintain at all times the number of men which are at present in the organization, on account of the agreement between the organization and the employers to supply men at all times when needed.

The employees urged that a man's aggregate wages per week, month or year are not sufficient to maintain him and his family at a proper standard of living and therefore the rate of wages per hour should not be lowered.

The employees urged that the rate of wages per hour should not be lowered because they now do a larger volume of work per hour, they now handle a larger tonnage per hour, and here I may state is where the Board failed to call experts such as stevedores who have the means of knowing the larger tonnage per hour as argued before the Board by a representative for the employees.

It is a fact that by reason of the present use of improved and new mechanical appliances, the employees do handle more tons per hour than formerly. In proof of this Mr. W. A. Wainwright, of the C.P.R., under sworn evidence said that the C.P.R. had a saving of seven (7) per cent last season through the use of mechanical appliances as against the hand truck.

Evidence was submitted to the Board that when mechanical appliances were used and where the sling load was increased, that, therefore, the gang should be increased. That is, if sling loads were increased 50 per cent, then the gang should be increased 25 per cent. The reason for this is that it was shown that sling loads have been increased from 25 to 165 per cent and the gang was not increased.

*Regarding Double Rates* per hour being paid for work on Sundays and holidays and at meal hours. This plan has been mutually agreeable and considered as fair by all parties to the agreements for many years. No strong reason for making any change at this time was advanced by the employers.

*Regarding Minimum Time* allowed when men are ordered out for work, the same is true. The plan seemed not to entail any hardship upon the employers. It ensures greater care in organizing the work, and that is all to the good.

The majority report recommends that the provisions in former contracts regarding double time and minimum time be included in the proposed new agreements, and in which I concur.

*Re Shipliners' Work.*—The shipliners wish a new clause added to the agreement providing that all fittings in connection with shoring of cargoes shall be done by shipliners. All parties informed the Board that most of this work is actually being done by shipliners or by longshoremen, and that only one employer uses his full time employees to do this work. The report of the majority of the Board states at page 17 of their report\* that a special carpenter is not required and here I may state that I am of the opinion that it is a special carpenter's work, more so, than general lining work, as it requires special sawcuts, must be shored from special angles and, therefore, requires special skill to perform this kind of work. Ninety per cent of this class of work is being performed by shipliners and is only opposed by one company, possibly to the extent of ten per cent. Despite this fact the majority report states that this section is not needed in the agreement.

#### *Re Dispute Between Coal Handlers and Their Employers*

The following are the facts admitted by all parties to the dispute:—

The work engaged in is almost entirely the importation of coal for the domestic market.

There has been no significant change in the volume of these imports during the last four years.

Of the employer parties to the dispute, only two are opposing the present scale of wages. (1) The Dominion Coal Co., Ltd., which imports its coal at this port and markets it in the wholesale trade. (2) R. P. & W. F. Starr, Ltd., import coal for their domestic retail trade. These two companies together import almost half of total coals imported at Saint John. The remainder of the coal handlers' earnings are derived from the other coal merchants in Saint John who are not parties to this dispute and together import slightly over half the total imports.

The coal merchants in Saint John who are not parties to this dispute have agreements with the coal handlers which are identical in terms with the agreement dated October 27, 1931, between the same coal handlers and the Dominion Coal Co., and R. P. & W. F. Starr and none of these other coal merchants have given notice to the coal handlers of the termination of those agreements.

*Wages.*—The chief matter in dispute is whether wages should be reduced from eighty cents per hour for day work to seventy cents

\* Page 20 (last line) of LABOUR GAZETTE.

per hour, which the two employers who are protesting the present scale of wages offer.

It was strongly urged by the coal handlers that their rate of wages should not be less than eighty cents per hour because the other coal merchants are under contract to pay that rate and are content to pay that rate. And here I wish to state that the combined wages of the Dominion Coal Co., Ltd., and R. P. & W. F. Starr, is approximately twenty thousand dollars for about one-half of the importation of coal into Saint John. Notice has to be taken of the minutes of the 17th session of the Board, which shows that about \$90,000 was paid by the other coal dealers in the city of Saint John through their stevedore, W. J. Swanton, in landing the other one-half of the total tonnage of imported coal. And the parties paying the majority of these wages are content to carry on under the present scale of wages and conditions.

*Minimum Time.*—The employers ask that the minimum time for which a coal handler shall be paid be fixed at one hour. Careful inquiry was made regarding the object and effect of this proposal. The rule heretofore in force has generally speaking been approximately satisfactory to all parties, and the majority of the Board recommends no change but that the existing rules be included in the next agreement and in which I concur.

*Re Rates for Overtime, Sundays and Holidays.*—The employers ask for a change to provide for time and a half instead of double time. The majority of the Board recommends no change in these rules and in which I also concur.

Having made my report, I would, therefore, ask as the member of the Board representing the employees, that the Board be reconvened for the following reasons, and at the same time bringing to your attention Sections 28 and 66 of the Act to aid in the prevention and settlement of strikes and lockouts, etc.

1. That the chairman several times during the sessions of the Board made the statement that the costs of living would not be given any consideration in the finding of the Board. Despite this fact the report of the majority of the Board is based on this very subject.

2. That the chairman during the sessions of the Board made the statement that if the employees could prove that seventy-five per cent of the wages of the coal handlers were paid to them by parties not opposing this matter, that he would allow the present rate of wage. But in the face of this statement the majority of the Board made their decision for a decrease despite the fact that evidence

was submitted to the Board that seventy-five per cent of the wages were paid by other coal merchants not opposing the present scale of wages, and who also state that they are satisfied with the present wage.

3. That the Board failed to obtain a practical knowledge of working conditions by neglecting to inspect and view ships and gangs in operation, although this could very easily have been arranged.

4. That the Board failed to call in expert witnesses such as stevedores, etc., who could have explained fully to the Board operations of the work of longshoremen and the conditions under which they work.

5. That the Board should have had the services of a departmental man to act in an advisory capacity during its sittings, and if the request of the representative of the employees is granted that the Board be reconvened, I would strongly recommend that the services of such a departmental man be secured to advise the Board.

Dated this twelfth day of December, A.D. 1932, at Saint John, New Brunswick, and

Respectfully submitted,

(Sgd.) JOHN N. SMALL,

Member.

Saint John, N.B., November 23, 1932.

The Chairman,

Board of Conciliation and Investigation

SIR:

*Re Dispute between the various Steamship Companies plying to the port of Saint John, N.B., and Local 273 General Longshore Workers of the port of Saint John, N.B., and Local 1039 Steamship Horse and Cattle Fitters, Sealers, Liners, and Cleaners, Union of the port of Saint John, N.B., Coal Handlers and Trimmers Local 810 of the port of Saint John, N.B. All being branches of the International Longshoremen's Association.*

The Longshoremen, Shipliners, and Coal Handlers, Signatories to labour agreements with the Steamship Companies to the Port of Saint John, N.B., beg to submit the following in regard to the dispute now before your board for consideration.

The agreement between the General Longshore Workers Local 273 I.L.A., and the Steamship Horse and Cattle Fitters, Sealers, Liners and Cleaners Local No. 1039, I.L.A., and the Coal Handlers and Trimmers Local 810 I.L.A., and the various Steamship Companies plying to the Port of Saint John, N.B., dated October 27, 1931, came into effect on November 1, 1931. This agreement was terminable on October 31, 1932, provided thirty days' notice was given in writing by either party. On September 26, 1932, the General Longshore Workers Local 273, the Shipliners Local 1039 and the Coal Handlers Local 810 received notice through the medium of the Shipping Federation of Canada

of the termination of the medium of the several agreements and received their proposals for new agreements.

The three locals upon receipt of the companies' proposals called for and held a meeting of the district waterfront council which includes representatives from all three bodies, and considered the companies' proposition and in rebuttal submitted their proposals to the Steamship Companies and which you will find attached to this statement (which have been already submitted to the Chairman).

Due to a decreased volume of work in the port of Saint John, which has reduced our earning power to such an extent that under the existing conditions we feel that in order to maintain a half decent standard of living it is the opinion of the locals involved that there should be no reduction in wages at this time.

It is a well known fact that the average water-front worker in the Port of Saint John has not earned sufficient wages during the past twenty-four months to provide for himself and those dependent on him in a right and proper manner.

When it is taken into consideration that our employers are asking us to accept a reduction in wages for straight time, for overtime, for a reduction in our Sunday and holiday rate, also reducing our waiting time allowance, and that coupled with the fact that they are demanding an increased sling load to the extent of from fifty to one hundred and fifty per cent over and above the sling load previously handled to October, 1931, and thereby again reducing our earning power.

In conclusion we feel that the demands of the steamship interests for a decrease in wages at this time is not justified.

Saint John, N.B., Nov. 26, 1932.

To Chairman of the Conciliation Board

SIR:—Realizing that you have a very grave responsibility placed upon your shoulders, and your position is a very difficult one, and that it is possible that you may have to render a decision in favour of one or the other parties interested in the question now before your Board, we beg leave to offer a few reasons why there should be no reduction in wages at this time.

1. Our employers are asking for a reduction in four different ways, they are asking for a reduction in straight time, on our Sunday and holiday time, on our meal hour and overtime, and on our waiting time.

2. In the case of the Longshoremen Local (273) they are also asking for an increased slingload which will shorten up the job and by that means cause a very material reduction.

3. Through loss of work during the past several years our men have not been able to earn enough to maintain themselves and their families in decency.

In order to perform our work in a satisfactory manner it requires men of a rugged nature, men of courage and strength, it is no place for a weakling and in order to be in that condition it is necessary for men to earn enough to properly clothe and feed themselves,

our men must be active, and able to face cold and storm along the shore and on the docks.

Our work is of a very hazardous nature, we never know when leaving our homes in the morning whether we will return to them, or find ourselves in a hospital, and in many cases accidents have proven fatal.

We wonder where is the social minds of our employers that they would ask to further lower the already low standard of living of their employees.

A reduction of wages would lower the purchasing power of our men which at the present time is at a very low ebb, and is in opposition to the opinions expressed by some of the best minds and newspapers of this great country.

Having every confidence in your fairmindedness, and feeling sure that any decision that you may render will be a fair and just one, we will now rest our case.

Longshore wages paid in other Atlantic ports:—

Montreal—Day, 59 cts. Night, 7 p.m. to 12 p.m., 69 cts., 1 a.m. to 5 a.m., 79 cts., with a free meal ticket for midnight meal.  
Double time for Sundays, Holidays, meal hours, etc.

Halifax—Day, 70 cts. Night, 80 cts. Double time for Sundays, Holidays, meal hours, etc.

Portland, Me.—Day, 75 cts. for 8 hours, \$1.10 for night work and overtime.

Boston .....

New York .....

Baltimore .....

Philadelphia .....

Respectfully submitted.

For Locals 273—1039—810—.

*Loss to men if reduction of ten cents an hour is put into effect.*

|   |           |
|---|-----------|
| Loss to men per hour of a gang of sixteen (16) men and a foreman.   | 1 70      |
| Loss to men for 1 day of nine (9) hours per gang. . . . .   | 15 30     |
| Loss to men on average of three (3) days per week. . . . .  | 45 90     |
| Total number of gangs organized last winter—(54)  |           |
| Take an average of fifty (50) per cent of gangs working daily, twenty-seven—(27)  |           |
| Loss to men in one day of nine hours (9) for twenty-seven gangs (27).   | 413 10    |
| Loss to men in one week on average of three (3) days a week for twenty-seven (27) gangs. . . . .                                  | 1,239 30  |
| Loss to men in winter season of twenty (20) weeks on an average of twenty-seven (27) gangs working three (3) days a week. . . . . | 24,786 00 |

NOTE:—This estimate is taken for the five months of the winter season, the peak months of the year, for the other seven months it is hard to strike an average on account of the slackness of work.

This is for work performed by Local 273 General Longshoremen.

NOTE.—These figures are taken from the *Carpenters' Journal*, and are in the interest of Local 1039 Liners.

#### Statement of Negotiations between I.L.A. and S.S. Companies

SAINT JOHN, N.B., Nov. 29, 1932.

On September the 29th the three I.L.A. Locals each received a letter from the S.S. Companies through their secretary Mr. McCallum of the Shipping Federation of Canada, notifying the Locals that the agreements now in force between them would be terminated on October 31, 1932, attached to the letter was a copy of proposed changes in working conditions and wages. Meetings were called of the different locals and the propositions of the S.S. interest were submitted to the different memberships, and committees were appointed to draw up counter propositions and after they were approved by the locals, the different secretaries were ordered to send copies to the Secretary of the Shipping Federation and to Mr. Ledingham, Chairman of the Saint John Shipping Interests, copies of our proposition are in the possession of the Chairman of the Conciliation Board.

On October the 19th, the committee representing the General Longshoremen Local 273 I.L.A. met with the representatives of the different S.S. interests and after several days of very hard arguments pro and con we finally deadlocked on the question of wages and motor equipment.

The S.S. representatives held a private conference and then made a compromise offer of a ten (10) per cent cut in wages instead of the original cut of ten (10) cents an hour, and our

old or last year's agreement, in its entirety, which included double time for Sundays, holidays, meal hours, overtime, waiting time, etc., but reserved the right, if the men refused the offer, to revert back to their original proposition.

They made the same compromise offer on wages to the committees representing Locals 1039 Liners, and 810 Coal Handlers. The compromise offer was submitted to the memberships of the different locals affected and was on ballot vote unanimously refused. All locals then applied for a Board of Conciliation, which Board is now in session.

The statement of earnings of the Canadian Pacific Railway for the first eleven months of 1932 shows the effect of the heavy cuts in operating expenses during this period. The gross total of revenue was \$114,235,513, a decrease of \$21,859,377, but in the same period operating expenses were reduced by \$17,804,408, so that net earnings of \$17,779,235 for the eleven months were less than those of the same period in 1931 by only \$4,054,969. The operating ratio for 1932 was thus 84.44 per cent. With far heavier gross receipts a year ago the operating ratio for the period was 83.96 per cent, or comparatively very little lower than for 1932.

## STRIKES AND LOCKOUTS IN CANADA DURING DECEMBER, 1932

THE following table shows the number of disputes, workers involved and time loss for December, 1932, as compared with the previous month and the same month a year ago.

| Date          | Number of disputes | Number of employees involved | Time loss in working days |
|---------------|--------------------|------------------------------|---------------------------|
| *Dec. 1932... | 12                 | 2,375                        | 10,378                    |
| *Nov. 1932... | 12                 | 1,130                        | 3,653                     |
| Dec. 1931...  | 14                 | 1,258                        | 15,649                    |

\* Preliminary figures.

The record of the Department includes lockouts as well as strikes, but a lockout, or an industrial condition which is undoubtedly a lockout, is rarely encountered. In the statistical table, therefore, strikes and lockouts are recorded together. A strike or lockout, included as such in the records of the Department, is a cessation of work involving six or more employees and lasting at least one working day. Disputes of less than one day's duration, and disputes involving less than six employees, are included in the published record only when ten days or more time loss is caused, but separate record of such disputes is maintained in the Department, and the figures are given in the annual review. Each month, however, any such disputes reported are mentioned in this article as "minor disputes."

The figures printed are inclusive of all disputes which come to the knowledge of the Department, and the methods taken to secure information practically preclude probability of omissions of a serious nature. Information as to a dispute involving a small number of employees, or for a short period of time, is frequently not received until some time after its commencement.

The number of strikes and lockouts recorded as having occurred in December is the same as in November, 1932, but the number of workers involved showed a substantial increase, due chiefly to a dispute involving 1,200 coal miners at Springhill, N.S. The time loss incurred also showed an increase over November during which month no disputes of any magnitude were recorded. As compared with December, 1931, although fewer strikes were recorded and a decline appeared in the time loss incurred, the number of workers involved was substantially higher, due also to the strike of coal miners mentioned above.

Three disputes, involving approximately 252 workers, were carried over from November, and nine disputes commenced during December. Of the twelve disputes in progress during the month seven were recorded as terminated, three resulting in favour of the employers involved, three in favour of the workers concerned, and the result of one is recorded as partially successful. At the end of December, therefore, there were five disputes recorded as strikes or lockouts in progress, namely: coal miners at Princeton, B.C.; women's clothing factory

workers, Montreal, P.Q.; lithographers, Toronto, Ont.; pulpwood cutters, Three Nations and Hoyle, Ont., and coal miners at Alexo, Alta.

The record does not include minor disputes such as are defined in a previous paragraph, nor does it include disputes as to which information has been received indicating that employment conditions are no longer affected but which the unions concerned have not declared terminated. Information is available as to six such disputes, namely: photo engravers, Toronto and London, Ont., Montreal and Quebec, P.Q., and Winnipeg, Man., May 4, 1931, one employer; photo engravers, Toronto, Ont., March 23, 1931, one employer; compositors, Regina, Sask., November 21, 1931, one employer; motion picture projectionists, Winnipeg, Man., February 27, 1932, one employer; motion picture projectionists, Toronto, Ont., July 11, 1932, two employers; and shoe factory workers, Montreal, P.Q., December 9, 1932, one employer, this last being added this month. The disputes involving motion picture projectionists at Ottawa, Ont., since February 29, 1931, and motion picture projectionists at Saskatoon, Sask., since August 27, 1932, carried in the above list for some months, appear to have lapsed by the end of December, and have accordingly been removed from the list.

A minor strike involving from four to six stationary engineers, firemen and helpers in one hotel in Toronto occurred on December 21, 1932. The employer being in financial difficulties reduced wages to rates which the union would not accept and the men ceased work, being replaced by non-union men.

A dispute involving certain employees in a logging camp at Allenwater, near Sioux Lookout, Ont., on November 10, 1932, was reported to the department during December. It appears that seventeen men ceased work demanding higher wages, the rate being \$15 per month and board, subject to deductions for blankets, doctor, etc. The employer dismissed them and reported that work was being carried on by the remainder.

A cessation of work by ten upholsterers in a furniture factory in Montreal on November 21, 1932, was reported to the department too late for more than a brief reference in the December issue of the LABOUR GAZETTE. Reports received since indicate that the strike was against a reduction in wages, piece work, and that as a result of negotiations a scale satisfactory to the employees was arranged and work was resumed on November 29.

Information has reached the department as to a strike of men's clothing factory workers in one establishment in Montreal during December, 1932, but particulars have not been received. It appears, however, that the strikers were members of the United Clothing Workers of Canada, and ceased work in protest against the employment of members of the Amalga-

mated Clothing Workers of America, an organization which had agreements with the employer as with others until last summer when the United Clothing Workers' union was recognized following a strike.

A number of disputes are reported from time to time involving men on unemployment relief work, receiving subsistence for which some

\* In this table the date of commencement is that on which time loss first occurred, and the date of termi-  
nation is the last day on which working time was lost to an appreciable extent.

work is performed or may be required. As no relation of employer and employee is involved, these are not included in the record.

The following paragraphs give particulars regarding certain disputes in addition to the information in the tabular statement:—

**COAL MINERS, PRINCETON, B.C.**—As stated in the December issue of the *LABOUR GAZETTE*, miners involved in this dispute ceased work on November 27, 1932, following a demand for a ten per cent increase in wages, a restoration to rates as at March 31, 1932, and certain changes in working conditions. Three employers were reported to be affected by the dispute, but employees of only two companies ceased work. The management of one of the collieries, after conferences with a committee representing members of the Mine Workers' Union of Canada, reached an agreement whereby the miners' demands were substantially granted, and work was resumed in that mine on December 12. A second strike occurred later in the month as stated below. In the remaining colliery, however, the management refused to meet the committee and closed down the mine; whereupon the union picketed the mines, obstructing roads, etc., until dispersed by the police. Some of the picketers are reported to have been arrested and fined. On December 15 the Vancouver representative of the Department of Labour, together with the Deputy Minister of Labour for the province of British Columbia, and a provincial mines inspector, visited the district in an effort to negotiate a settlement. The officials of the colliery, while assuring the governmental representatives of their willingness to grant certain concessions if a meeting could be arranged between themselves and the employees of their mine, refused to recognize the Mine Workers' Union of Canada or deal with their representatives. The miners, on the other hand, insisted on dealing through a committee of the union. Being unable to reconcile the parties on this point, the governmental representatives left the district as the operators of the colliery stated it was not their intention to make further efforts to re-open the mine. At the end of December no termination had been reported. One of the union leaders is reported to have been arrested on a charge of membership in an unlawful association, bail being refused.

**WOMEN'S CLOTHING FACTORY WORKERS, MONTREAL, P.Q.**—During the month of December several arrests were made in connection with this dispute, which had commenced on October 15, 1932 (the employees protesting against the dismissal of union workers and demanding recognition of the Industrial Union

of Needle Trades Workers), bringing the total of those arrested during the dispute to fifteen. The charges against those arrested included obstructing the sidewalk, attempting to damage property and assault, all arrested being remanded for trial. At the end of the month the dispute was reported to be still unterminating.

**PULPWOOD CUTTERS, THREE NATIONS AND HOYLE, ONT.**—One hundred and twenty pulpwood cutters, members of the Lumber Workers' Industrial Union of Canada, are reported to have ceased work about December 10, 1932, demanding an increase in wage rates from \$1.25 per cord to \$1.50 with a decrease of 25 cents per day to 75 cents in the rate for board, men on daily wages demanding \$1.50 per day and board. At the end of the month no termination had been reported.

**COAL MINERS, PRINCETON, B.C.**—On December 26, 1932, one hundred and forty-five coal miners, members of the Mine Workers' Union of Canada, employed in one colliery, ceased work in sympathy with four men who had been laid off for absents themselves from work on December 24 in protest against the decision of the management that no holiday would be granted on that day. This mine had been involved in a strike earlier in the month, as mentioned above. Several of the miners were prosecuted, some under the British Columbia Coal Mines Regulations Act, for failure to maintain positions of trust and some under the Federal Industrial Disputes Investigation Act, for ceasing work without due notice. As a result of negotiations between the president of the company and employees' representatives a settlement was reached, the discharged men being reinstated, and work was resumed Monday, January 2, 1933.

**COAL MINERS, SPRINGHILL, N.S.**—Approximately twelve hundred miners, members of the United Mine Workers of America, employed in one colliery, ceased work before midnight on December 19, 1932, demanding the dismissal of one worker who had been expelled from the union for making a false accusation against another miner; this man had been suspended and required to apologize, but ignored the demand. The management on being requested by the union to discharge the worker in question, refused to take any action without first investigating the case. The union officials stated the constitution of the union required them to refuse to work with non-union workers. Pickets were placed about the colliery, but the miner complained of did not apply for his lamp, and work was resumed before midnight on December 20.

**COAL MINERS, RESERVE, N.S.**—Miners in one colliery refused to work on December 21 and December 22, demanding an increase in relief allowances from the municipal authorities when unemployed, claiming that when the mines were open they had not sufficient food. Some improvements in relief arrangements being made, work was resumed.

**COAL MINERS, ALEXO, ALTA.**—Miners in one colliery are reported to have ceased work on December 17, 1932, for wage increases and improved working conditions. At the end of the month no settlement had been reported.

**SHOE FACTORY WORKERS, MONTREAL, P.Q.**—A number of employees in one factory, eighty out of two hundred and fifty, ceased work on December 9, 1932, against a reduction in piece rates for eighteen lasters. A change in the process of work had been made and rates reduced thirty-three per cent. The management closed the factory and explained the situation to the employees, and all but fifty returned to work. The strikers picketed the establishment, several being arrested for assault, etc. The strikers were organized by an Industrial Union connected with the Workers' Unity League and demanded recognition of a shop committee. The strikers were partly replaced and the factory continued to operate. The resident representative of the Department attempted to arrange negotiations for a settlement, but the employer refused to meet the union representative again. The dispute is recorded as terminated on December 21, but picketing was reported to be carried on at the end of the month. The dispute is, therefore, included in the list of such strikes and lockouts, carried elsewhere in this article, where

although working conditions are no longer affected, the dispute has not been formally called off by the union.

**TEXTILE FACTORY WORKERS, HAMILTON, ONT.**—Workers employed in certain departments of one knitting factory ceased work on December 6, 1932, protesting against the introduction of a new system on grounds of efficiency which affected piece work particularly. Later in the same day, however, work was resumed. It is understood that some modifications in the system were made.

**STONECUTTERS, RIVIERE-A-PIERRE, P.Q.**—Some forty stonecutters employed in a quarry by a sub-contractor for a building ceased work on December 1, 1932, in protest against delay in payment of wages. It is reported that the employer was experiencing financial difficulties and that the employees demanded payment twice monthly. The strikers, however, were replaced in a few days and work was resumed on December 5.

**BARBERS, TORONTO, ONT.**—Barbers, members of the Journeymen Barbers' International Union of America, employed in some fifty-five establishments in Toronto, ceased work on December 5, 1932, as a result of a wage reduction in shops chiefly operated by members of the Master Barbers' Association Jewish section. A reduction in wages had been arranged previously by the union and the Master Barbers' Association for other shops and later the Jewish employers reduced the rates to a still lower scale. As a result of negotiations a minimum of \$18 per week plus fifty per cent of the receipts for each chair in excess of \$26 per week was agreed upon, and work was resumed next day.

## STRIKES AND LOCKOUTS IN GREAT BRITAIN AND OTHER COUNTRIES

### Great Britain

**T**HE latest available information as to strikes and lockouts in various countries is given in the LABOUR GAZETTE from month to month, bringing down to date that given in the issue of February, 1932, in the review of Strikes and Lockouts in Canada and Other Countries, 1931. The latter review included a table summarizing the principal statistics as to strikes and lockouts since 1919 in the several countries for which such figures were available. Many countries publish these statistics only once each year, the figures being issued in some cases after an interval of as much as two years, and for such countries the latest figures are not for relatively recent dates.

The number of disputes beginning in November was 17 and 12 were still in progress from the previous month, making a total of 29 disputes in progress during the month, involving 136,100 workers with a time loss of 714,000 working days for the month. Of the 17 disputes beginning in November, 12 were over wages questions, one over a question of working hours; 2 on questions of the employment of particular classes or persons and 2 on questions of trade union principle. During November, settlements were made in 22 disputes, of which 6 were in favour of workers, 8 in favour of employers and 8 ended in compromises.

## France

Strikes of dockworkers at Havre and at Dunkirk were reported during December, against reductions in wages following the fall in the cost of living index number.

## Norway

The number of disputes reported for the year 1931 was 82, involving 59,524 workers with a time loss of 7,585,832 working days for the year.

## New Zealand

The number of disputes reported for the first nine months of the year 1932, was 17, involving 54 firms and 8,297 workers, with a time loss of 65,953 working days for the period.

## United States

The number of disputes beginning in October was 34 and 41 were still in effect at the end of the month. The number of workers involved in disputes in effect at the end of the month was 4,505, and the time loss 159,197 working days for the month.

## EMPLOYMENT AND SALARIES IN CIVIL SERVICE OF CANADA IN 1931

STATISTICS of the Civil Service of Canada, including numbers employed and expenditure on salaries, for the year ended March 31, 1931, have been recently published by the Dominion Bureau of Statistics. Monthly payrolls of the departments are tabulated, the statistics presented distinguishing between permanent and temporary employees. It is pointed out that in several departments there are certain employees whose work is of a casual nature, and who for various reasons do not come under the operation of the Civil Service Act. In the statistics, these employees are referred to as "non-enumerated classes." The numbers of such employees are not available, though the expenditure on their wages and salaries is recorded.

On March 31, 1931, the total number of employees was 45,581 as compared with 44,175 on the payrolls at the end of the fiscal year, 1930, or an increase of 1,406. Of the total of 45,581, 32,715 were classed as permanent and 12,866 as temporary employees.

During the fiscal year, 1930-31, the total expenditure on salaries and wages of civil servants was \$94,310,982.87. Of this total, \$55,967,975.10 comprised the total of the payroll of permanent civil servants: \$14,198,335.56, the salaries paid to temporary civil servants; while \$24,144,672.21 was the salary and wage expenditure for non-enumerated classes. Comparative figures for the previous fiscal year were: grand total of salaries and wages \$90,808,425.71; permanent, \$52,812,375.19; temporary, \$14,365,823.17; non-enumerated classes, \$23,630,327.35.

The following table gives the total number of permanent and temporary employees in the Dominion Civil Service and the total salary expenditure for such employees for March, 1931. In several of the larger departments there are important branches under distinct supervision apart from the main de-

partment, and in such cases statistics are shown separately.

\* The number of employees does not include the non-enumerated classes.

## GOVERNMENT EMPLOYEES' COMPENSATION ACT

### Report on Administration throughout Canada during 1931-1932

THE annual report of the Department of Railways and Canals for the fiscal year ended March 31, 1932, includes a statistical review of the administration of the Government Employees Compensation Act. In the interests of economy, and because the Canadian National Railways have the largest number of employees within the scope of the Act, this legislation is administered for all departments of the government service by the Department of Railways and Canals.

The provisions of the Act, which was adopted in 1918, are as follows:—

1. (1) An employee in the service of His Majesty who is injured and the dependants of any such employee who is killed, shall be entitled to the same compensation as the employee, or as the dependant of a deceased employee, of a person other than His Majesty would, under similar circumstances, be entitled to receive under the law of the province in which the accident occurred, and the liability for and the amount of such compensation shall be determined in the same manner and by the same boards, officers or authority, as that established by the law of the province for determining compensation in similar cases, or by such other board, officers or authority or by such court as the Governor in Council shall from time to time direct.

(2) Any compensation awarded to any employee or the dependants of any deceased employee of His Majesty by any board, officer or authority, or by any court, under the authority of this Act, shall be paid to such employee or dependant or to such person as the board, officer, or authority or the court may direct, and the said board, officer, authority and court shall have the same jurisdiction to award costs as in cases between private parties is conferred by the law of the province where the accident occurred.

In 1925, the Act was amended so as to provide that compensation should include medical and hospital expenses, the new section being retroactive in its operation to May 24, 1918. In its 1930-31 report the Department pointed out that prior to January 1, 1931, employees' compensation payments to employees of the Canadian Government Railways were made directly out of the Consolidated Revenue Fund. This procedure was then discontinued, and with reference to the change of procedure this year's report states that it "has had the effect of apparently reducing the total amount of Dominion disbursements during the year. Comparisons therefore should not be made as against the expenditure of the Dominion by years on this account unless elimination is made of the Canadian Government Railways' amounts."

"The effect of the application of the Government Employees' Workmen's Compensation Act", the report observes "has occasioned certain increases in costs of personnel to the Government which, because they are not apparent, perhaps, deserve special comment in this place.

"The strikingly large proportion of awards in hernia cases that develop from the class of employees of the age of 45 or over in provinces where such cases are accepted as a basis for awards by the Provincial authorities would appear to warrant the institution of arrangements for competent medical inspection where employees of 45 or over are being taken into departmental staffs. It has become practically necessary to challenge every claim of this nature, and a considerable expense develops from the necessity to assemble and place evidence before the provincial authorities.

"Also the impressively large number of general claims developing from the engagement of temporary employees, particularly those engaged under emergency relief and associated programs of work, would appear to indicate the advisability of arranging for competent medical inspection prior to engagement of such employees."

Since 1920-21, when the Act was first put into effect, \$3,500,996 has been paid out in compensation, pensions and medical aid to government employees throughout the Dominion. This expenditure, with administration expenses amounting to \$269,802.96 (less interest accruing on advances on deposit) amounted to \$3,769,628.75 at March 31, 1932. During the ten years in which the Act has been administered by the department the total of claims adjusted has ranged from a low of 1,787 in 1922-23 to a high of 3,960 in 1929-30.

Exclusive of the Canadian National Railways the total number of claims on which payments were made during 1931-32 was 1,979, of which 747 were for compensation and medical aid; 1,026 were for medical aid only, and 206 were for pensions. During 1931-32, Dominion expenditures under the Act including compensation payments, etc. amounted to \$185,546.32, as compared with \$429,098.19 for the previous year which for nine months, included the disbursements under the Act to Canadian National Railways employees.

Apart from the Canadian National Railways, other departments having a large number of claims and large disbursement expenditures were as follows:—

Railways and Canals (Canals).—535 claims, involving disbursements amounting to \$48,445.06.

Public Works.—339 claims, involving \$42,271.43.

Marine.—336 claims, involving \$22,048.67.

Interior.—194 claims, involving \$17,830.21.

Hudson Bay Railway.—152 claims, involving \$12,328.19.

Post Office.—188 claims, involving \$8,381.65.

National Defence.—67 claims, involving \$8,209.33.

The accompanying table indicates the payments under the Act during the year ended March 31, 1932, by provinces:—

| Provincial Board<br>or<br>Government                          | Dominion<br>expenditure<br>including<br>amounts<br>advanced | Disbursements                          |  |

## CONVENTIONS ON SAFETY OF LIFE AT SEA

A Proclamation dated November 18, 1932, and gazetted November 26, brings into operation the Safety of Life at Sea and Load Line Conventions Act, 1931. This Act authorized the ratification of two conventions signed at London in 1929 and 1930 respectively, by the leading maritime nations. The provisions of both Conventions apply only to ships on international voyages, and the Act expressly states that it does not apply to ships engaged on voyages between Canada and the United States on any lakes or rivers.

The points covered by the Safety Convention include the division of hulls of passenger ships into water-tight compartments so arranged as to localize flooding in case of accident; the provision on such ships of a sufficient number of life-boats with competent life-boatmen to man them and life-saving appliances for all on board, and the equipment with radio apparatus of all ships except cargo ships of less than 1,600 tons gross. Annex I contains regulations dealing largely with the construction of ships including the provision of practicable means of escape for the crew from working spaces and crew spaces and of means of fire detection and prevention.

The main points covered by the Load Line Convention are the marking of load lines on the sides of ships indicating the maximum depth to which they may be loaded; and division of the world into zones, and the fixing of the depth to which ships may be loaded when undertaking voyages to the various zones. Exempt under this Convention are ships of war, fishing vessels, pleasure yachts,

etc., and ships of less than 150 tons gross. Annexed to the Convention are rules for determining maximum load lines on the various types of ships. These require, *inter alia*, the provision of gangways, life-lines or other satisfactory means for the protection of the crew in getting to and from their quarters. The strength of houses for the accommodation of crew on flush deck steamers is to be equivalent to that required for superstructure bulkheads. The rules dealing with steamers carrying timber deck cargo require efficient lashings to be provided. Safe and satisfactory access to the quarters of the crew to the machinery space and to all other parts used in the necessary work of the ship is to be available at all times. Deck cargo in way of openings giving such access is to be so stowed that the openings can be properly closed against the admission of water. Efficient protection for the crew in the form of ground rails or life-lines spaced not more than 12 inches apart vertically is to be provided on each side of the deck cargo to a height of at least 4 feet above the cargo. The cargo is to be made sufficiently level for gangway purposes. Rules governing load lines for tankers also require safe and satisfactory access to the quarters of the crew, machinery space and all other parts used in the necessary work of the ship, to be available at all times except in the case of pump rooms entered from the free board deck when fitted with class I closing appliances.

Certain sections of the Act come into force as from the date of proclamation in the CANADA GAZETTE, namely, those dealing with

confirmation of the Conventions, application of the Act, the making of regulations by the Governor-in-Council, provision for inspection, the issue of Safety Certificates, Exemption Certificates, Load Line Certificates and Safety Radiotelegraphy Certificates.

On January 1, 1933, those sections became effective which deal with the application of the Load Line Convention, and on January 1, 1934, the remaining sections, which provide for the carrying out of the Safety Conventions, will come into force.

## WORKMEN'S COMPENSATION IN NEW BRUNSWICK

### New Regulations Effective on January 1, 1933

THE following regulations under the Workmen's Compensation Act of New Brunswick came into effect on January 1, 1933, all previous regulations being repealed (Amendments to the Act which were adopted by the Legislature in 1932, were outlined in the LABOUR GAZETTE, November, 1932, page 1178).

#### REGULATION I

(This Regulation defines the various classes into which all industries within the scope of the Act are divided for the purpose of administration.)

#### REGULATION II

Where not more workmen than the number set opposite to the names of an industry mentioned in the schedules below are usually employed therein, such industry is hereby excluded from the scope of Part 1 of the Act, and is withdrawn from the class in Regulation I in which it would otherwise be included; subject, however, to any conditions attached to such industry or to any conditions contained in the schedules, and subject to the other regulations of the Board, so far as applicable.

Fishing..... 50  
Mining (including prospecting or developing work)..... 5

"Any ship, tug, dredge, boat or any other vessel, owned, managed or controlled in the Province of New Brunswick that is engaged in any business that takes it without the boundaries of the Province..... 500 men

Provided, however, that this regulation does not apply to any ship, tug, dredge, boat or any other vessel that may be owned, managed or controlled by His Majesty the King as represented by the Government of the Dominion of Canada in the person of the Minister of Marine and Fisheries and under the control or management of the agent of the Department of Marine and Fisheries having jurisdiction over the Province of New Brunswick.

Hand laundries..... 25

Any boat or vessel, owned, managed or controlled in the Province of New Brunswick engaged in carrying freight, cargo or passengers from one part of the Province to another part of the Province..... 5

The business of window cleaning..... 10

Aerial flying, testing, demonstrating; carrying of passengers or freight, either by aeroplane or other means of aerial transportation, including the carrying on of work in connection with an aerodrome and all work incidental thereto..... 200

#### REGULATION III

The interpretation of words and phrases provided for in Section 2 of the Act shall apply to these and all other regulations of the Workmen's Compensation Board.

#### REGULATION IV

Whenever the word "Act" appears in any of these regulations or in any regulations that may be passed by the Board, it shall refer to The Workmen's Compensation Act, and amendments thereto or that may be hereafter made.

#### REGULATION V

Every employer within the scope of Part 1 of the Act, shall as directed by the Board, post up and keep posted up in conspicuous places within easy access of his workmen, such card or pamphlet of information concerning the Act, or regulations of the Board, as may be supplied to him by the Board, and a copy of the Act if so desired.

#### REGULATION VI

Any person who contravenes any regulation of the Workmen's Compensation Board after it has become effective, where no other penalty is provided therefor, shall, for the contravention thereof incur a penalty not exceeding \$500.

#### REGULATION VII

Every person who contravenes any of the provisions of Section 14 of the Act, shall for every contravention, incur a penalty not exceeding \$50; and shall also be liable to pay to the workman any sum which has been so deducted from his wages, or which he has been required or permitted to pay in contravention of Section 14.

#### REGULATION VIII

For every contravention of subsections 4 or 5 of Section 41 of the Act the employer shall incur a penalty not exceeding \$50.

#### REGULATION IX

Any employer and every person who obstructs or hinders the making of the examinations and inquiry mentioned in Section 71, subsections 1 and 2 of the Act, or refuses to permit it to be made shall incur a penalty not exceeding \$500.

#### REGULATION X

Any employer and every such person who obstructs or hinders the making of any inspection made under the authority of Section 73 of the Act, or refuses to permit it to be made, shall incur a penalty not exceeding \$500.

## REGULATION XI

Every steam engineer contravening subsection 8 of Section 49, shall be liable to a penalty not exceeding \$25.

## REGULATION XII

Every person who contravenes any of the provisions of Section 75 of the Act, shall incur a penalty of \$50.

## REGULATION XIII

**First Aid.**—In an industry within the scope of the Act, it shall be the duty of the employer to provide a suitable First-Aid Kit approved of by the Board and in charge of a suitable person and adequate opportunity for the administration of first-aid.

## REGULATION XIV

*Industrial Diseases Schedule*

**Anthrax.**—Handling of wool, hair, bristles, hides and skins.

**Lead Poisoning or its Sequelae.**—Any process involving the use of lead or its preparation or compounds.

**Mercury Poisoning or its Sequelae.**—Any process involving the use of mercury or its preparations or compounds.

**Phosphorus or its Sequelae.**—Any process involving the use of phosphorus or its preparations or compounds.

**Arsenic Poisoning or its Sequelae.**—Any process involving the use of arsenic or its preparations or compounds.

**Sulphur Poisoning or its Sequelae.**—Any process involving the use of sulphur or its preparations or compounds.

**Ammonia Poisoning or its Sequelae.**—Any process involving the use of ammonia or its preparations or compounds.

**Carbon Bisulphide or its Sequelae.**—Any process involving the use of carbon bisulphide.

**Carbonic Acid Gas.**—Any process involving the use of carbonic acid gas.

**Ankylosistomiasis.**—Mining.

**Glanders.**—Care of any equine animal suffering from glanders, handling the carcass of any such animal.

**Compressed Air Illness.**—Any process carried on in compressed air.

**Infection by handling Sugar.**—Any process involving the refining of sugar.

## REGULATION XV

No physician or surgeon shall be entitled to remuneration from the Board for medical aid rendered to any workman unless such physician or surgeon shall furnish the Board from time to time, without additional charge, such reports as may be required by the Board in respect of such workmen and unless such reports shall have been furnished within such time as the Board deems reasonable, provided, however, that the Board may in its discretion waive this requirement of Regulation.

## REGULATION XVI

When any estimate or payroll submitted by an employer under Part 1 is less than Four Hundred Dollars, such payroll shall for assessment purposes be considered and assessed as Four Hundred Dollars. Provided, that if any employer submit more than one estimate or payroll in any one year for an industry or portion of an industry, the sum total of such estimates or payrolls shall be considered in the assessing of any subsequent estimate or payroll.

## REGULATION XVII

Any employer failing to pay any assessment or special assessment or any prescribed portion thereof within ten days after notice thereof has been mailed to him by registered post, shall pay for such default a percentage at the rate of 7 per cent per annum of the amount unpaid for each calendar year or fraction thereof that such default continues.

Dated December 15, 1932.

**Workmen's Compensation in Saskatchewan**

The Workmen's Compensation Board of Saskatchewan recently issued Regulation 51, amending Regulations 1 and 24 (LABOUR GAZETTE, April, 1930, pages 392 and 395), as follows:—

## REGULATION 51

(a) The last clause of Regulation 1 adopted by the Board on March 20/30, approved by the Lieutenant Governor in Council on March 21, 1930, and published in *The Saskatchewan Gazette* March 29/30, and reading as follows:

"After the actual payroll for the year has been ascertained, adjustment shall be made, and any balance found due by an employer by reason of such adjustment shall be paid with the first instalment of the next provisional assessment," is struck out of the said Regulation and the following substituted therefor:

"After the actual payroll for the preceding year has been ascertained, an adjustment of assessment shall be made accordingly and any balance found due on account of such adjust-

ment shall, subject to all other Regulations governing the matter, be added to the first payment of the current year's assessment, but shall nevertheless be deemed to be due and payable as of the date of the notice of the adjusted assessment, and shall, as to any arrears of payment on the assessment made on the estimated payroll for the preceding year, continue to carry penalties in accordance with the Regulations in respect thereto; but any increase of assessment due to adjustment of payroll shall not carry any penalties with respect to under-estimate of payroll for the preceding year, unless exceeding 50 per cent, until the expiration of one month from the date of the notice."

(b) There shall be added to Regulation 1 the following:

"When a provisional assessment is made on or after July 31 on any employer commencing or recommencing an industry the whole of the provisional assessment shall be payable in one instalment, and if made on or after September 1 shall be payable on the date of the notice thereof, but no penalty for non-payment thereof

shall be imposed within ten days of the date of the notice.

"Adjustments of previous years' assessments resulting in an increase of assessment and ascertained by investigation on behalf of the Board of the employer's payroll shall be deemed to be due and payable on the date of the notice thereof, but no penalty for non-payment thereof shall be imposed within ten days of the date of the notice.

"Notwithstanding the other provisions of Regulation 1, or the provisions of any other Regulation, any assessment made by the Board on an employer may be made payable on any date fixed by the Board for payment either prior to or subsequent to the date of the order fixing the date of payment."

(c) Regulation No. 24 as adopted by the Board on March 20, 1930, approved by the Lieutenant Governor in Council on March 21, 1930, and published in *The Saskatchewan Gazette* on March 29, 1930, is hereby wholly rescinded and the following substituted therefor:

"Notwithstanding anything elsewhere contained in any Regulation of the Board, any construction work directly undertaken by any person who is not regularly employed in such business and has not established or is not establishing an industry in such business, and is not doing such work as part of or incidental to an industry which is not within Schedule One, for example a person who is engaged in such operations as an isolated undertaking and for his own purposes only, or as for example a person who constructs, adds to, repairs or demolishes a building or other structure for his

own purposes and not as incidental to an industry within Schedule One and is not generally engaged in construction business, shall not be deemed an industry within Schedule One, nor shall the person carrying on such work be deemed an employer within Schedule One, and such person shall not be deemed to be carrying on an industry within Schedule One. Nothing in this Regulation shall be construed to exclude any work which is let by contract by such person, or to exclude such person from the operation of Section 11 of the Workmen's Compensation (Accident Fund) Act, or to excuse such person from reporting to the Board any work let by contract, the performance of which constitutes an industry within Schedule One of the said Act.

"A person proposing to carry on such construction work as is referred to herein may be admitted as an Employer under Schedule One for any particular construction work for which he makes application for admission in writing to the Board with an estimate satisfactory to the Board of the proposed payroll involved in such construction work, and by payment in advance of the work having begun of the proper assessment thereon, but no such application shall be granted unless made prior to the commencement of such construction work and payment of the proper estimate of assessment made to the Board before the commencement of such construction work, and a deposit of cash made with the Board in an amount to be set by the Board to provide for the actual payroll exceeding the estimated payroll, which deposit shall be made with the payment of assessment."

### Workmen's Compensation in Quebec

The Workmen's Compensation Board of Quebec published during December, Regulation No. 7, under the Act of 1931 as follows: (Earlier regulations appeared in the *LABOUR GAZETTE*, December, 1932, page 1261; July, 1932, page 771, and in previous issues):—

#### Regulation No. 7

"Acting in virtue of the powers conferred upon it by article 77 of the Workmen's Compensation Act, 1931 (21 Geo. V, Chap. 100), the Quebec Workmen's Compensation Commission enacts that from the 1st of January, 1933, the following industries shall be subject to the Act only when generally employing six or more workmen, to wit:

1. Any establishment where they sell, repair or keep motor vehicles;

2. Public sheds or garages, with or without repair shops;

From the 1st of January, 1933, by-law No. 2 of the Commission, adopted by the Lieutenant-Governor in Council on the 9th of July, 1931, shall be amended by deleting therefrom the words: "public sheds or garages without any repair shop" from paragraph "i" of section 1 of the aforesaid by-law; and, from and after the same date, paragraphs "a" and "b" of section 4 of said by-law No. 2 shall be deleted and replaced by the following:

a. Repair shops which are not garages;

b. Blacksmiths' or joiners' shops."

### United States Employees' Compensation Commission

The 16th annual report of the United States Employees' Compensation Commission, recently published, describes the work carried on during the fiscal year ended June 30, 1932, under the three Acts administered by the Commission. These three workmen's compensation laws are as follows: (1) The United States Employees' Compensation Act of 1916; (2) Longshoremen's and Harbour Workers' Compensation

Act, of 1927, and (3) The District of Columbia Workmen's Compensation Act. The Commission, which was established in 1916, is a bi-partisan body, consisting of three members appointed by the President by and with the advice of the Senate, one of whom is designated by the President to serve as chairman.

1. *The U.S. Employees' Compensation Act.*—This Act, as approved September 7, 1916, provided compensation and medical care for civil employees of the United States suffering personal injuries while in the performance of their official duties and for the care of dependents of those who died as a result of their injuries. By subsequent legislation the law has been made applicable to employees of the government of the District of Columbia, exclusive of members of the fire and police departments, and to officers and enlisted men of the Naval Reserve. Under section 14 of the Naval Reserve Act of 1925, any officer or enlisted man of the naval reserve, who, in time of peace, is physically injured in line of duty while performing active duty or authorized training duty is entitled to the same benefits provided for civil employees of the United States.

The term "civil employee" has been held by the commission to include all employees of the Federal Government, including direct employees of the United States Shipping Board Merchant Fleet Corporation, the Inland Waterways Corporation, and other corporations in which the capital stock is owned exclusively by the United States, and employees engaged in work under certain co-operative agreements between the Federal Government and the States.

2. *Longshoremen's and Harbour Workers' Compensation Act.*—This Act provides compensation for employees of private employers while engaged in maritime employment upon the navigable waters of the United States, including any dry dock. The master and members of the crew of any vessel, and any person engaged by the master to load or unload or repair any small vessel under 18 tons net, are specifically excluded from the benefits of this law. The largest class of employees subject to this law are longshoremen, who in the course of their work of loading and unloading vessels are in maritime employment, and who therefore are at times outside the scope of State compensation laws. The law also extends to all mechanics and ship repairmen, men delivering supplies for the use of a vessel, solicitors of marine contracts, and inspectors (exclusive of employees of the Federal or any State Government), who sustain injuries arising out of and in the course of their employment upon the navigable waters of the United States, including any dry dock. Attempts made by the commission to secure accurate information relative to the number of employees coming within the scope of this law have been unsuccessful, due to the fact that employment in the stevedoring industry is for the most part

irregular. Many employers have relatively few regular employees and supplement their regular working force, when the occasion demands, from employees having no regular employment. It is the opinion of the commission that the number of employees who at times are engaged in employments covered by this law may be conservatively estimated as in excess of 300,000.

3. *District of Columbia Workmen's Compensation Act.*—This law, which is in all respects comparable to a State compensation law, is perhaps more inclusive in the scope of employments covered than workmen's compensation laws in effect in any of the States. It applies to employees of practically all employers carrying on any employment in the District of Columbia, and thus includes an employer who in the usual course of his business or profession may have in his employ only one employee working only a few hours a day or week. The only employees in private employment in the District of Columbia excluded from the benefits of this law are a master or a member of a crew of any vessel, an employee of a common carrier by railroad when engaged in interstate or foreign commerce, and an employee engaged in agriculture, domestic service, or any employment that is casual and not in the usual course of the trade, business, occupation, or profession of the employer. Employees covered by this law are variously estimated to number from 75,000 to 100,000, and the number of employers subject to its provisions is approximately 14,000.

Under existing procedure there is no review of the findings of fact made by the deputy commissioner in the District of Columbia if supported by competent evidence, and review by the court of the decision of this administrative officer is limited to questions of law.

---

Man-hour output in the manufacture of pneumatic tires in the United States has increased 86 per cent since 1926, 172 per cent since 1922, and 581 per cent since 1914, as a result of technological changes, according to a study by the Bureau of Labour Statistics. Until 1930, annual increases in the total output of tires were usually sufficient not only to reabsorb the large surpluses of labour caused by the technological changes, but to increase the total number of workers employed. Since 1930, however, the drastic reductions in the total number of tires produced, coupled with further and even larger increases in labour productivity, have resulted in a large body of tire workers being totally unemployed, with the remaining workers employed only part time.

## WORK OF THE DEPARTMENT OF PENSIONS AND NATIONAL HEALTH DURING THE FISCAL YEAR 1931-32

THE annual report of the Department of Pensions and National Health for the fiscal year ending March 31, 1932, reviews the work of the department during that period, including that of the Pensions Division (which deals with pensions of ex-service men), the War Veterans' Allowance Committee, the Board of Pension Commissioners for Canada, the Pension Tribunal, the Pension Appeal Court, and the Health Division. The last named division deals with matters affecting public health, child welfare, etc.

Statistics of the Pension Division indicate that admissions to hospital were 11,116 during the period covered, as compared with 12,077 in the previous fiscal year. The total number who received in-patient treatment was 14,267, as against 15,519 in 1930-31 and 12,939 in 1929-30. Treatments under the out-patient department increased from 161,816 to 179,814. Of the number actually in hospital on March 31, 1932, 1,676 were in departmental hospitals while 950 were in civil institutions, making a total of 2,626 as against 3,127 in the year previous. The number of veterans' care cases showed an increase of 27, the total at the end of the fiscal year being 198.

*Employment and Relief.*—Two organizations—the Employment Service of Canada and the Montreal Rehabilitation Committee—directed the work of securing employment for disabled ex-service men. The total number of applicants for employment was 19,067. Of this number, there were 7,451 placements, 6,477 cancellations, and 5,139 pending placements. Comparative figures for the year previous showed 18,201 applicants, 8,846 placements, 5,679 cancellations, and 3,676 pending placements. Pensioners in Canada at March 31, 1932, numbered 64,733, while the number outside Canada was 11,145, making a total of 75,878. This total reflects an increase of 9,209 over the previous year. Of the total number of pensioners, 5,139 were registered as unemployed, an increase of 1,463 as compared with the year previous.

Sheltered employment was continued in Vets-craft Shops. The Vancouver factory was closed on December 31, 1931, owing to the unsafe condition of the building, but factories were still being operated in Halifax, Montreal, Toronto, Hamilton, and one at Victoria by the Canadian Red Cross Society. The total number of men employed at March 31, 1932, was 191, as compared with 240 one year previous, and during the fiscal year now under review, 46 men were taken on strength and 95 struck off. The manufacture of poppies, wreaths, toys

is undertaken in these factories and affords employment to men who would have little or no work value in other occupations.

During the year 36 cases were taken on for vocational training and 6 for probational training, the latter being classed as "industrial problem cases." At the close of the fiscal year there remained on strength two men undergoing vocational training and three receiving probational training.

The number of pensioners who were granted relief in the form of orders for food, rent, fuel, in 1931-32 was 12,303 as compared with 8,811 in 1930-31, and 5,548 in 1929-30. Relief in 1931-32 was issued 145,561 times on an average of 11.83 times per man, while the value of relief orders totalled \$2,082,052.10.

*Pensions.*—The total number of permanent disability pensions in force as at March 31, 1932, was 75,878, while the number of dependents' pensions in force was 19,308. In the former there was an increase of 9,209 awards, while the latter reflected a decrease of 368. The total number of beneficiaries under the Pension Act, including all classes of pensioners or dependents on whose account pension is being paid, is now 258,793, which is an increase of 147 as compared with the number for the previous fiscal year. The total liability in respect of pensions for the fiscal year ending March 31, 1932, was \$41,853,377, which represents an increase of \$1,646,561 over the liability for the preceding annual period.

Under the War Veterans' Allowance Act of 1930, which is administered by a committee of three members, provision is made for a living allowance for the aged or permanently disabled pensioner whose condition is only partially pensionable, and for the aged or permanently disabled veteran not eligible for pension provided that he saw service in a theatre of actual war, when such pensioner or veteran is in necessitous circumstances.

The report of the War Veterans' Allowance Committee is cumulative and covers all activities for the 19 months' operation since the Act became effective on September 1, 1930, to the end of the fiscal year, March 31, 1932. The number of cases as at March 31, 1932, was 3,825, and the liability on the same date was \$1,257,334.

*Soldiers' Insurance.*—The number of applications received for returned soldiers' insurance was 1,463, as against 1,563 during the previous fiscal year. Ninety-two applications were refused for various reasons. There was again an

increase in the number of surrenders. The number of policies in force on March 31, 1932, was 28,426, a decrease during the year of 587. The amount of insurance carried was \$62,-680,341.

*Workmen's Compensation in Respect of Pensioners.*—Under Order in Council P.C. 558, 1928 (LABOUR GAZETTE, December, 1928, page 1333), the Dominion Government assumes workmen's compensation liability for pensioners of 25 per cent disability rating and upwards who are suffering injury or disease as a result of an industrial accident. This provision has been renewed from time to time. The expenditure under this enactment is largely governed by the number of fatal accidents. During the fiscal year under review, the number of claims was 200, being 8 more than during the previous year. The expenditure was \$49,878, as against \$45,142 in 1930-31.

*National Health.*—This section of the department deals with the various agencies operating for the public welfare in health matters. The food and drugs division, administering the Food and Drugs Act, maintains an inspection service for analysis of foods and drugs imported, manufactured, and offered for sale. According to the report, "the duty of checking adulteration and misbranding of products so vital to health and well-being of the people of Canada is a serious obligation of the Food and Drugs Division." Dealing with its efforts in this respect, the report touches on the work of its inspectors as follows:

"In the course of the year they submitted 14,527 samples for analysis, and handled numerous prosecutions and seizures. The amount of work done and the good accomplished cannot be estimated solely from these figures. Many inspections are made and irregularities corrected without an analysis being necessary. The intimate contact with importers and manufacturers has a very beneficial effect so far as the direct interests of the purchasing consumer and the ultimate interests of trade are concerned. A food or drug business operating on a basis of fraud can have nothing more than a temporary advantage.

"The punitive phase of the legislation is brought forward only when there is evidence of a wilful breach of the law. Even in the full light of explanations and warnings some will persist in illegal practice. During the year it was found necessary to institute proceedings in 62 cases, of which 30 went to trial and convictions registered in all. It is regrettable that the public press makes little or no mention of these actions. Eight cases were settled and in 24 the penalties were paid as provided by section 26 of the Food and Drugs Act. The majority of these prosecutions arose from the adulteration of meat products, the remaining eight being occasioned by adulteration or mis-

branding of spices (cloves and pepper), ice cream and soft drinks. The moneys collected covering fines, fees for analyses and costs amounted to \$9,103.45."

The Narcotic Drug Division continued its efforts to curb illegal traffic in drugs. Other phases of the report of the health section dealt with the quarantine and immigration medical inspection service, and public health engineering with its inspection of water supplies on vessels, railway trains, and other common carriers in international and interprovincial traffic.

*Marine Hospitals Service.*—This service operates under the Canada Shipping Act, its chief function being to provide medical and surgical attendance to sick and injured mariners belonging to vessels that call at Canadian ports from foreign parts and to protect these ports from being saddled with the expenditure incurred. This is done by collecting dues from every vessel, subject to certain exceptions, at the rate of two cents per ton of registered tonnage not oftener than three times a year. Sick mariners belonging to vessels that have paid these dues for the current calendar year are entitled to gratuitous treatment, provided they are sent to a designated doctor or hospital with a written recommendation from the master of the vessel, endorsed as approved by the collector of customs. During the year, the receipts amounted to \$184,485.47 and the expenditure amounted to \$208,845.90. Sick mariners' dues were collected from 2,818 vessels. These vessels carried 86,301 seamen and 5,816 sick or injured mariners received treatment; 3,394 were sent to doctors paid by the department and 1,137, or 34 per cent of these required hospitalization. The total number sent to the various hospitals was 3,559; 919 received out-patient treatments, and 2,640 were admitted as ward patients. The number of out-patient treatments was 2,970 and the number of hospital days was 57,256. Although there was a considerable decrease in the number of vessels that paid dues and the number of seamen eligible for treatment, there was not a corresponding decrease in the applications for treatment.

The Division of Child Welfare reviews extensively the successful work carried on in the large field of child and maternal welfare and health education.

During the month of December a total of 2,586 accidents were reported to the Ontario Workmen's Compensation Board in the industries in Schedule 1 of the Act, 8 of which were fatal cases; in Schedule 2 industries, 159 were reported, including 3 fatal cases; and 215 accidents to employees of the Crown, 1 of which was fatal, were reported during the month, making in all 2,960, of which 12 were fatal.

## NOTES ON INDUSTRIAL SAFETY AND HEALTH

### Safety of Mine Workers in New Brunswick

The coroner's jury which inquired into the circumstances of the death of two miners employed by the Minto Coal Company, Limited, New Brunswick, on December 1, commented on the absence of mine safety regulations in the province. The men were carrying timbers across the tracks in the main level when they were struck by runaway cars, loaded with coal and shale. During the hearing, the general manager suggested that the coupling pin had not been properly put through the link. He thought the equipment was good, and with the human element entering into the matter it would be difficult to place the blame in any one direction. A letter was read from a Montreal firm, saying that the coupling was considered the best obtainable.

The assistant mine manager stated that a safety rope had been added since the accident. Mr. W. E. McMullen, inspector of mines for New Brunswick, pointed out that in the absence of mine safety regulations in the province he had no appointed duties in that direction.

In their verdict the jury found that the runaway of the cars was caused by the spreading of shackles between the sixth and seventh car of a 12-car string. They attached no blame to any person, but made the following recommendations: that shackles and drawbars on coal cars be thoroughly inspected by competent authorities to determine the cause of the spreading of the shackles; to determine if drawbars are made up to proper specifications, and that steps be taken, if necessary, to prevent the occurrence of the spreading of shackles; that the Provincial Government take action to formulate a mining law designed to safeguard employees and mining companies regarding working conditions in mines; that the Minto Coal Co., Ltd., put in the necessary safety devices as soon as possible.

### "Industrial Medicine"

A new monthly magazine under the above title began publication at Chicago in October, 1932, its purpose being "the cumulative study of the industrial inter-relation of medicine, law, insurance and economics." The first two issues contain numerous expert articles dealing with various phases of safety and health in industry, the writers being mostly of the medical profession. A useful feature is a cumulative index, which begins with the second issue, giving references to all the subjects treated in past issues.

### Medical Service of the Bell Telephone Company of Canada

Dr. A. R. Pennoyer, medical adviser of the Bell Telephone Company of Canada, contributes to the first issue of *Industrial Medicine* an account of the medical service provided by this company for their employees. This service covers medical services, sickness disability, benefits, pensions, death benefits, etc. The "medical machinery" employed consists of three branches: (1) First Aid Work.—The company now has 4,500 fully qualified and certificated "first aiders" who often render inestimable service not only to employees but to the public; (2) Accident Prevention Work.—This goes on continuously, and "has yielded remarkable results, reducing accidents in an almost unbelievable way"; (3) Health Courses to Women.—This covers elementary anatomy, physiology and hygiene, and leads to a certificate of proficiency.

The company's plan covering pensions, disability benefits and death benefits is carried out under the direction of a committee made up of important officials of the company. Employees make no payment towards this plan, nor for any other medical service rendered by the company. The company do not treat their employees for sickness, except in minor and emergency cases, and the employees select their own doctors and pay for their own medical care. The plan provides for the payment of wages during sickness on an increasing, graduating scale from two to 10 years' service, beginning with four weeks' full pay and nine weeks' half pay, and increasing to a maximum of 13 weeks full pay and 39 weeks half pay. The medical department reports to the senior vice-president, and it is under his general supervision that the work is carried out. Pensions are granted on a basis of age and length of service. Death benefits are also based on length of service, and are applicable when there is a dependent beneficiary.

The medical establishment comprises a part-time staff of medical advisers and surgeons and full-time nurses. The work carried out by the medical machinery employed by the company includes the following departments: the supervision of sanitation in buildings; supervision of construction camps (in this connection tribute is paid to the Provincial Boards of Health of Quebec and Ontario for their co-operation); expert advice to all departments of the company on matters having a medical aspect; examination of applicants for positions; dealing with all acci-

dent cases; co-operation with employees' physicians; physical examinations in ambulatory cases under the care of outside physicians; maintenance of medical units at Montreal and Toronto where any employee, by permission of his or her supervisor, may apply for medical examination and advice; and service for minor medical and surgical conditions for employees not disabled enough to stop work.

Dr. Pennoyer expresses the belief that "a well-designed and well-conducted medical service is a profitable venture for any company with 1,500 employees or over."

### Health Record in 1932

A recent issue of the *Statistical Bulletin*, published by the Metropolitan Life Insurance Company, contained the following review of the past year in regard to public health: "Every indication, up to the end of the third quarter of 1932, is that 1932 will be a record health year in the industrial populations of both the United States and Canada. The deathrate for three-quarters of the year among the many millions of Metropolitan industrial policy holders was at the astonishingly low figure of 8.7 per 1,000. This is well below the previous minimum for the corresponding part of any year. All sections of the United States have shared in this excellent health record; and the picture is equally favourable in Canada. Furthermore, such data as are available for the population at large show that health conditions throughout 1932 have been unprecedentedly good. The year has been singularly free from widespread epidemics and from major catastrophes."

Dr. Louis I. Dublin, vice-president of the Industrial Health Relations Department of the Company, gave further information on the same subject in the course of an article in the *American Journal of Public Health*, November, 1932.—"It is particularly gratifying to note the very favourable health conditions that have prevailed throughout the United States and Canada during the last year. By and large, the health of the people as measured by the reports of sickness and deaths has never been better, in spite of the fact that this is the third year of serious economic depression. With possibly 10 millions unemployed and with the general state of mind clouded with many perplexities and uncertainties, the health of our communities has apparently stood up well. Sickness and death rates are either the lowest in the history of the country or very close to it. Early in the year, the Surgeon-General of the U.S. Public Health Service reported that the death rate in 82 large cities had been 11.8 per 1,000 in

1931, as compared with 11.9 the year before. Since then, morbidity and mortality have continued each month at an extremely low level. For the first 37 weeks of 1932, General Cumming reports a death rate of 11.2 for 85 large cities, as compared with 12.1 for the same period in 1931. The industrial life insurance companies, whose experience is also indicative of what is transpiring in the general population, are likewise reporting the lowest mortality rates among their policy holders. In the largest of these companies, the cumulative experience up to the end of September this year was about 3 per cent lower than last year which was an excellent health year. The best feature of this picture is the fact that there is no evidence as yet that the depression has adversely affected the physical resistance of the people.

"I have speculated," as Dr. Dublin continues, "as to what underlies the satisfactory health picture, and will consider briefly some of the factors which are probably involved in the situation. There is first the favourable meteorological conditions which have prevailed. The weather was propitious both last winter and this summer, and as a result many people were able to lead an active outdoor life. In addition, there were no serious epidemics of disease. Influenza was less widespread this year than it has been recently; the cases that occurred were much less virulent and resulted in fewer attacks of pneumonia and other fatal complications. I would mention also changes in the mode of life which have been forced on many people during the depression and which probably contributed to better health habits. There has undoubtedly been less over-drinking and over-eating. People have been less exposed to the hazards of machinery. Unemployment, much against their will, has brought them rest and leisure, more sunshine, and opportunities for outdoor exercise, all of which play a part in keeping people well."

### Unemployment and Public Health

In an article published in the *International Labour Review* (Geneva), December, 1932, on "The Economic Depression and Public Health," the writer finds that up to the present, statistics have not yet shown clearly any increase in the mortality or morbidity figures resulting from the depression and the extension of unemployment. In several countries, however, there are many indications of a gradual deterioration of the health of unemployed persons and their children, owing in part to malnutrition. Thus, among the 300,000 to 400,000 school children who are examined in New York every year, the percentage of sickly children rose from 13.5 in 1927 to 17.1

in 1931 and to 20.5 in the first three months of 1932. In France, where the depression was not felt until later, it was found in certain schools that the average weight of children of four to six years showed a decline in 1932, as compared with 1930. This decline was especially noticeable in a school where a number of children were those of unemployed parents. In this school it amounted to 1.029 kilogram, while in others it varied from 23 to 56 grams. In some of these children the reduction in weight noted during the school year was followed by an immediate and considerable increase, amounting to as much as 1.08 kilogram, after their admission to an open-air school where they received a strengthening diet.

### **Safety Record of Sherwin-Williams Company of Canada**

A silver cup, won by the employees of the Sherwin-Williams Company of Canada, Ltd., in the inter-plant safety competition of the Quebec Association for the Prevention of Industrial Accidents, and eight bronze medals for chauffeurs of the same company who had no accidents for twelve months, were presented in the employees' hall of the plant at Montreal on January 4.

Mr. Arthur Gaboury, as general manager of the Quebec Association for the Prevention of Industrial Accidents, and secretary-general of the Province of Quebec Safety League, made the presentation. "During the period of the inter-plant competition from September, 1931, to May, 1932," he said, "the Sherwin-Williams Company of Canada Ltd. has operated over 977,575 hours without a lost-time accident, thus making its accident frequency rate zero and winning the cup for its group. Since May, 1932, to the end of November of the same year, the company's accident frequency rate has remained at zero, showing the keen interest taken in the competition by the employees."

### **Sickness Insurance for Farm Workers in Austria**

The Austrian National Association of Agricultural Sickness Funds held its first general meeting on September 8, 1932, when it celebrated the tenth anniversary of the coming into force of the system of sickness insurance for workers in agriculture and forestry. The president of the Association emphasized the value of agricultural insurance, which guaranteed to a class of workers in special need of protection rights which had hitherto been confined to industrial and commercial workers. Sickness insurance, he said, had had to adapt itself by degrees to the special character of agriculture. These efforts had been crowned with success, since the system now included nearly half a million workers and salaried employees in agriculture.

The Federal Chancellor, Mr. Dollfuss, refuted the criticisms which had been raised against insurance on the ground that it imposed a new burden on agriculture. He pointed out that before the introduction of insurance the risk of sickness of workers in agriculture was already covered, and that this covering was borne by the employers only. Insurance had merely brought into prominence an already existing burden without increasing it, while raising considerably the effectiveness of the methods of covering the risks.

The Minister of Social Affairs, Mr. Resch, dealt with the origins of agricultural insurance, and recalled that it had been demanded even by the organizations of independent farmers. All the parties concerned were in agreement on the principle of insurance, and opinions differed only in regard to methods of application. Insurance as it had been instituted had already borne fruit; the health of insured persons had improved, the number of doctors practising in agricultural districts had increased, the hospitals had improved and enlarged their resources owing to the participation of the insurance funds in the cost of maintenance and treatment of sick persons, and infant mortality was declining.

The annual report on Prices and Price Indexes, covering the period 1913 to 1931, with detailed statistics for 1931 in Canada and summary figures for other countries, has been recently issued by the Dominion Bureau of Statistics. The report includes information as to commodity prices, wholesale and retail, with index numbers, prices of securities and services. The index numbers of wholesale prices for the principal groups have been given monthly in the LABOUR GAZETTE, taken from a monthly bulletin giving current figures, which is also issued by the Bureau. A feature of the present report is a table of index numbers of wholesale prices by groups, monthly, from 1900 to 1913. Previous reports gave monthly figures back to 1913 only. An index number from 1867 to date is also included as in previous reports. The results of a special inquiry into the budgetary expenditure of 53 civil service families during the period May 1, 1931, to April 30, 1932, is also included.

During the month of November a total of 2,849 accidents were reported to the Ontario Workmen's Compensation Board in the industries in Schedule 1 of the Act, 15 of which were fatal cases; in Schedule 2 industries, 186 accidents were reported, including 1 fatal case; and 192 accidents to employees of the Crown, 2 of which were fatal, were reported during the month, making in all 3,227, of which 18 were fatal.

## LEGISLATIVE PROPOSALS OF TRADES AND LABOUR CONGRESS PRESENTED TO ONTARIO GOVERNMENT

THE legislative program recommended by the Trades and Labour Congress of Canada for adoption in the province of Ontario was presented to the Provincial cabinet on January 4 by the Ontario Executive Committee. The members of the committee are: Messrs. Jos. Tomkins, Toronto (Chairman); Rod Plant, Ottawa; E. W. A. O'Dell, Hamilton; and Ted Jackson, Toronto. The committee was accompanied by Mr. Tom Moore, President of the Congress, with a large delegation from organizations affiliated to the Congress.

The Hon. George S. Henry received the delegation on behalf of the Ontario Government. He promised that their proposals would receive careful consideration. The program was in part as follows:—

*International Labour Conference.*—The memorandum asked that definite action be taken to give effect to the conventions of the International Labour Conference that come within the jurisdiction of the Provincial Government.

*Unemployment and Unemployment Insurance.*—The memorandum expressed labour's appreciation of the temporary relief of immediate distress that was being afforded by the province in co-operation with the Dominion and the municipalities, but it suggested that "this has fallen far short of adequately coping with the situation. We have also noted arrangements made to provide work for a limited number of single unemployed men on road construction, etc., but keenly regret that more adequate remuneration is not given these men so as to enable them to obtain clothing and essential requirements from their earnings. Under the present arrangements this is not possible, and immediately they leave the work camps they are compelled to again rely upon public or private charity for their maintenance.

"Labour has made its position clear on previous occasions that its first demand is for opportunity of employment, and that where private enterprise fails to provide this, that governments have a responsibility, through the undertaking of public works, purchasing of necessary supplies, etc., to provide work for as many as possible. Direct relief should only be resorted to when every effort in this direction has been exhausted, and we feel constrained to protest against the change of policy made during the past year whereby expenditures on such works was practically abandoned, and direct relief, on a scale scarcely sufficient to

provide the necessities of life, substituted therefor.

"In respect to the question of unemployment insurance, we note that this is to be the subject of discussion at a Federal-Provincial Conference to be convened in Ottawa on the 17th of this month. In this connection we would direct attention to the fact that the Legislatures of British Columbia, Alberta, Saskatchewan and Manitoba have adopted resolutions favouring the principle of unemployment insurance. At this conference opportunity is afforded the Government of Ontario to co-operate in establishing a Dominion-wide plan of unemployment insurance to which the State, employers and employed would contribute. Enactment of such legislation would stabilize and continue the purchasing power of workers during periods of unemployment, and thus provide additional work for others, induce greater effort towards co-ordination of seasonal activities, lead to the employment of labour already in Canada instead of securing immigrant labour, result in better budgeting of work so as to reduce the peak periods of employment and the subsequent periods of depression. It would prevent family demoralization which often occurs when, through inability to obtain employment, workers are compelled to depend upon charity or public assistance such as exists under the present direct relief policy. It would reveal actual facts concerning the amount and causes of unemployment, and thereby provide valuable information essential to prevent unemployment, and would generally make for higher living standards. During times of extreme distress, such as exists at the present time, large sums of money are being expended by public authorities in providing temporary relief, and this would be largely obviated by the establishment of a properly organized unemployment scheme. We therefore urge that your Government will at this conference actively support the enactment of Dominion-wide contributory unemployment insurance and measures that will enable the same to be wholly administered by Federal authorities, even though these should entail securing amendments to the British North America Act, as was intimated might be necessary in the statement made to Parliament by the Rt. Hon. R. B. Bennett. We are strongly of the opinion that no question of jurisdiction should be allowed to remain as an obstacle to this immediate essential piece of legislation or any other measure which will

bring relief to the victims of unemployment or lead to a greater degree of social justice.

"In addition to the foregoing, we again desire to reiterate requests submitted on previous occasions which deal with other phases of the question. While as a matter of convenience these are merely summarized, we ask the same consideration for them, believing that they are essential to the solution of the problem of unemployment:—

1. Extension of financial assistance to municipalities in carrying on relief works, such assistance to be provided for the repair and erection of public buildings, and that on all such works and those to which financial assistance is rendered, carried on by such bodies as appointed commissions, etc., regulations governing the same shall provide for the six-hour day and thirty-hour week without reduction in the aggregate earnings of the workers involved.

2. That purchase of departmental and other supplies during periods of unemployment be adopted as a policy of the Government.

3. The clearing of agricultural lands as a means of providing employment.

4. That adequate provision be made for the relief of all needy unemployed women on at least the same basis as men.

5. Enactment of legislation applicable to all industries in accordance with the Washington Labour Convention of the International Labour Organization (League of Nations) which provides for an eight-hour day. This matter has been declared by the Supreme Court of Canada as coming within the jurisdiction of Provincial Governments, and if given effect to, would materially assist in reducing the volume of unemployment within this province.

6. Extension of the principle of public ownership of public utilities so as to prevent watering of stocks and other forms of over-capitalization or profiteering in connection with the necessities which are the rightful heritage of the people.

7. Abolition of fee charging employment exchanges and further development of free employment bureaus, and through these, that assistance be rendered in transporting workers to distant jobs and temporary employment.

*Moratorium.*—Satisfaction was expressed at the enactment at the last session of the Ontario Legislature of a measure to restrict the foreclosure of mortgages for one year from February, 1932. "While this has no doubt proven of considerable advantage," the memorandum declared, "it has nevertheless, failed to entirely meet the situation, as it does not cover the interest charges, nor does it include cases where property is being purchased on the agreement of sale plan, whereby principal and interest payments are bulked and paid as rental over a period of years, or cases of seizure for arrears of taxes."

Attention was directed to the Act in Manitoba, which makes the same provision as the Ontario Act, but also allows municipalities to enact by-laws consolidating taxes on property

in arrears, and permits the payment of such arrears in instalments extending over a period of five years, all other proceedings for collection and penalties being suspended. A further enactment permits a debtor to consolidate other debts and make payments based on his ability to pay, and so long as such payments are kept up no proceedings for collection may be taken against the debtor. The memorandum proposed that, with such extension, the Act of 1932 should be continued for another year.

*Electrical Inspection.*—It was proposed that an Act be passed providing for the examination and licensing of all electricians in the province and that a competent board or boards of examiners be appointed to enforce such law under the direction of the Minister of Labour.

*Protection of Linemen, etc.*—Regulations it was suggested, should be made in Ontario, as in Alberta, for the protection of linemen and others engaged in the electrical industry.

*Old Age Pensions.*—The Provincial executive reiterated the opinion of the Trades and Labour Congress that the age limit for pensions should be 65 instead of 70 years. It was stated that in many instances local authorities were laying undue stress on the Parents' Maintenance Act in connection with the granting of pensions as at the present time sons and daughters cannot properly support their own families. The memorandum called the attention of the government to "the policy of tightening up that has been put into effect during the past year. While being," it continued, "in complete accord with any attempt to check abuses, we most emphatically protest against the adoption of any regulations that would turn Old Age Pension into an Old Age pittance, and we learn, with regret, that your Commission has put into effect several rulings toward that end—such as the reducing of pensions from \$20 to \$15 because the pensioner is living with some member of the family, or simply because two old people are living together. We trust that these and all such other unwritten changes to the Act will receive the attention of your Government, with a view to at least restoring the Act to its former usefulness."

It was further suggested that the Old Age Pension Commission should have a labour member.

*Moving Picture Operators.*—It was suggested that two licenced operators be required in all operating booths, for the protection of the public and that the examination of applicants for licences be made more exacting.

*One-Man Street Cars.*—The delegation opposed the methods of manning cars, as dangerous to passengers.

*Mothers' Allowances.*—The memorandum asked that a mother with one child be provided for in the Act, and that the property exemption be raised from \$2,500 to \$5,000. Attention was also called to cases where, on the advice of the doctor, the father has been placed in a hospital outside the Province, and where the mother, in order to be near her husband, has accompanied him outside the Province, but within the Dominion, and taken up temporary residence until such time as her husband can be removed, and in the event of death the widow is debarred from benefits under the Act, and in returning to her home not only suffers the loss of her husband, but also the loss of protection as provided by the Act.

*Mechanics' Lien.*—It was noted that the Mechanics' Lien Act had been amended to give mortgage holders and supply houses added protection, and the memorandum asked that a further amendment be made to give further protection to workmen, and to facilitate collection of wages due as a first charge against property.

*Bankruptcy and Banking Act.*—The delegation pointed out that when bankruptcy proceedings are instituted wages rank fifth or sixth in all preferred claims, whereas other claims are given priority rights. They therefore asked that all charges for wages be paid before any other claims are considered, and that the Act be amended accordingly.

*Shorter Hours of Work.*—Compulsory enforcement of a shorter work-day and work-week was proposed for the purpose of overcoming the displacement of manual labour by machinery. It was suggested that the Minimum Wage Act, as now in operation, allows for long hours being worked, and that the Act should be amended to give the Board power to fix hours of labour.

*Fair Wages.*—Under this head the memorandum asked that provision be made for the Provincial Department of Labour to be responsible for drafting the wage schedule for each undertaking and for the enforcement of same; also that each Department of the Government and each commission appointed by the Government be authorized by provision in the Fair Wages Act to incorporate the Fair Wages Regulations and Wage Schedule in all specifications attached to drawings and contracts for any or all undertakings.

*Busses and Trucks.*—It was proposed that regulations governing drivers of motor trucks and busses provide for an eight-hour day and one day's rest in seven; and that steps be taken immediately to place motor transportation companies under the jurisdiction of the Board of Railway Commissioners for Canada or some similar authority with respect to tariffs, etc., and that a more equitable taxation be established in respect to such companies. It was further suggested that the Ontario Government co-operate with other Provinces and the Federal Government to the end that the recommendations as outlined in the Duff report be adopted as uniform regulations.

*Workmen's Compensation.*—The memorandum noted that the provisions of the Act in regard to First Aid were inadequate, especially in outside districts; and recommended that such work be placed under the Board. Other proposals under this head were that all corporations, industries and institutions come under the jurisdiction of Schedule One of the Act; also that greater preventive measures to be taken in respect to industrial diseases, and especially that attention be drawn to all cases of silica poisoning.

*Paint Spraying and Industrial Poisons.*—It was recommended that the factory regulations be extended so as to afford protection to workers exposed to such hazards.

*Licensing of Steam Fitters.*—"In view of the fatal accidents," the memorandum stated, "that have occurred in steam plants and residences throughout the Province of Ontario in the past, we desire to draw to the attention of this Government the necessity of licensing of steam fitters, and the inspection of all installations of systems that come under the jurisdiction of the steam fitting craft, also the licensing of master steam fitters, so that the responsibility for serious accidents can be placed on the person or persons responsible for same, and try if possible to put an end to the gross carelessness and incompetence that have been allowed in this particular craft in the past. Several years ago regulations for the installation of plumbing and providing for licensing were drafted by the Provincial Board of Health and were never put into operation as they were awaiting Government consent. We earnestly urge that your Government give your consent to such regulations in the interests of the Public Health."

*Industrial Disputes Investigation Act.*—The memorandum recommended as follows:—"Whereas legislation enacted during the last session of the Legislature making the Federal Industrial Disputes Investigation Act

operative in Ontario, exempts certain public utility commissions, we urge that action be taken to bring the same within the scope of the Act."

*Miscellaneous Requests.*—The memorandum also contained the following proposals:

Amendment to the Factory Act to provide for shorter hours of labour.

Prohibition of employment of female labour and of boys under 18 years of age on power-cutting-machines in printing offices, paper mills, etc.

Licensing and inspection of barber shops.

Permission to employees of public utilities to take active part in municipal affairs.

Increase of witness fees.

Discontinuance of employment of married women in Government service.

Labour representation on all commissions.

Shorter work day on all provincial public works.

Labour representation on the Ontario Liquor Control Board.

Permission of the sale of beer by the glass in licensed premises.

Reduction in rates of interest on government bonds, and that future loans be at the rate of interest allowed on bank deposits.

Inclusion of boys under the Minimum Wage Act.

Equalization of income tax levy by municipalities through the provinces, and that its collection be mandatory.

Abolition of election deposits.

Establishment of a system of health insurance.

Substitution of physical for military training in schools.

Enforcement of law governing blowers.

Uniform building regulations through the province.

Bonding of lawyers handling trust funds.

Public election of members of Public Utility Commissions.

Legalization of sweepstakes.

## Questions Decided by Vote of International Typographical Union

At the last convention of the International Typographical Union, held at Long Beach, California, on September 12-17, 1932, (report of which is given on page 1273 of the last issue of the *LABOUR GAZETTE*) certain recommendations were adopted and ordered to be sent to a referendum vote of the membership. The following paragraphs show the result of the vote on the six propositions, which was taken on December 7:

(1) To levy an assessment of one per cent for defensive purposes (drafted by executive council in compliance with instructions of 1932 convention)—For, 21,887; against, 28,354; majority against, 6,467.

(2) To amend pension law and govern expenditures in connection therewith—For, 23,370; against, 25,950; majority against, 2,580.

(3) To establish a five-day week in all newspaper offices and make provision operative in commercial offices where possible—For, 32,073; against, 18,000; majority for, 14,073.

(4) To change time of annual convention opening day—For, 34,513; against, 12,238; majority for, 22,275.

(5) To limit membership in the executive council to the President, first, second and third vice-presidents, and the secretary-treasurer—For, 28,943; against, 16,879; majority for, 12,064.

(6) To make clear that all members of the International Typographical Union have the

right of appeal to the executive council—For, 33,551; against, 13,697; majority for, 19,854.

The executive council has submitted the following proposition, which will be voted on by the membership on February 15, 1933:—

Shall a special assessment of one per cent be levied upon total earnings of all active members (except sick and disabled members and pensioners), for a period of one year beginning March 1, 1933, and ending February 28, 1934? Money received from such assessment shall be placed in a separate fund. Disbursements shall be made by order of the executive council for the purpose of paying strike and lockout benefits, special assistance and other expenses necessary for the protection of the union.

The Prussian Minister of Social Welfare recently ordered the municipalities and rural districts to take measures for providing small garden plots for the unemployed, especially those with families. Land belonging to the municipalities or to the State will be made available for this purpose, and if this is insufficient, the governors of the provinces may compel private owners to lease their land for such use. The land must be leased for at least 10 years and preferably for 15 to 20, so that the tenant will be sufficiently interested to do all the work required for satisfactory results. Garden implements are to be furnished by the municipality. The official organization in charge of the work will co-operate with the local branches of the private national society that promotes small-scale gardening.

## LEAGUE OF NATIONS INTERNATIONAL LABOUR ORGANIZATION

### Report on Unemployment Insurance

The last issue of the *LABOUR GAZETTE* (page 1288) referred briefly to the publication of a report published during December at Geneva under the title: "Unemployment Insurance and various forms of Relief for the Unemployed." The report was prepared in view of the 17th conference to be held this year, at which this is to be one of the items for a first discussion with a view to the framing of a questionnaire for submission to the member states. The present report shows that the principle of a benefit scheme for involuntarily unemployed persons is applied in a large number of countries. It also shows that the measures of application vary considerably from country to country and even from time to time in the same country.

"The conclusion which may be drawn from these facts," it is pointed out, "is that any international regulation adopted must be adaptable to different circumstances. If such international regulation takes the form of a Draft Convention, the Convention should deal primarily with the principle of unemployment benefits for unemployed persons, without entering into great detail as to the machinery of carrying it out.

"It is desirable, however, to determine as far as possible the relative amount of the charges which each state will undertake to assume, as a result of the Convention, for the maintenance of the unemployed. There ought to be a substantial measure of equivalence in respect, for example, of the definition of unemployment, the benefit conditions, the minimum rate of benefit provided, the minimum benefit period, and in respect of the scope of unemployment benefits. If a Draft Convention were adopted leaving to each signatory State the choice between a benefit system applicable compulsorily to all wage earners and salaried employees, or certain specified classes of them, and a system dependent on the voluntary initiative of the persons concerned, it would be necessary that in respect of the latter system guarantees of a certain minimum standard or supplementary measures for the uninsured workpeople should be provided for."

### Correspondence Committee on Accident Prevention

The correspondence committee for the Prevention of Industrial Accidents met during December at the International Labour Office. During its five sittings it discussed and adopted a monograph concerning the means of preventing accidents by the use of safe voltages for portable electric equipment, and

a similar monograph on electric lamp caps and lamp holders.

The committee discussed a draft monograph on safety in spray painting and made some preliminary comments on a draft study on safety in the construction and use of lifts. The experts present also had an exchange of views on the question of the protection of building workers against accidents. Finally, the committee decided to undertake further studies on safety in the use of grinding wheels and in the use of protective screens for preventing eye injuries to workers.

### Canadian Delegates to Conference on Hours of Work

The Canadian representatives attending the preparatory conference which opened at Geneva on January 10, to study the question of the reduction of working hours in industry (*LABOUR GAZETTE*, December, 1932, page 1285), were as follows:—

Dr. W. A. Riddell, Geneva, Canadian advisory officer accredited to the League of Nations, representing the Dominion Government.

Mr. A. R. Goldie, Galt, chairman of the industrial relations committee of the Canadian Manufacturers' Association, representing the employers.

Mr. R. J. Tallon, Montreal, vice-president of the Trades and Labour Congress of Canada and president of the Railway Shop Crafts Federation of Canada, representing the workpeople of Canada.

### Report on Hours of Work and Unemployment

The International Labour Office has issued, under the title of "Hours of Work and Unemployment," a report intended to serve as a basis for the discussions of the Preparatory Conference which is meeting in Geneva on January 10 to consider the technical problems involved in an effort to remedy unemployment by shortening hours of work. The conclusions of the Preparatory Conference, it will be remembered, are to be laid before the International Labour Conference at its Seventeenth Session, which opens in Geneva on May 31, 1933.

The report consists of five chapters, devoted to different aspects of the problem of the reduction of hours of work as a remedy for unemployment. The first chapter describes the present situation as regards hours of work; the second considers the possibilities of re-absorbing the unemployed by means of a reduction of hours; the third discusses the many methods of reduction; the fourth describes

the action already taken by the public authorities in different countries, by legislation and otherwise, and analyses the results of the experience so far gained.

The information contained in these four chapters permits certain conclusions to be drawn, the chief of which would appear to be that, on the whole, a general reduction of working hours would tend to increase the volume of employment, more particularly when economic recovery begins to make itself felt. The fifth chapter is therefore devoted to a study of the question whether the measures already taken in different countries can be generalized by international agreement. This question is examined in all its aspects, and, by way of concrete suggestion, a scheme is outlined for dealing with the subject by a Convention and Recommendations.

In a foreword to the report it is pointed out that the subject is one of admitted complexity and difficulty, and that many aspects of it are still far from having been fully explored. In these circumstances, the report does not claim to be exhaustive or final. Rather, it is put forward as a first attempt to study internationally a problem which is everywhere being recognized as one of far-reaching importance and which is bound to engage the attention of industry for a considerable time to come.

### 16th Conference Proceedings

The International Labour Office recently published a record of the proceedings of the Sixteenth Session of the International Labour

Conference (Geneva, 1932). The record consists of a single volume of a thousand pages, divided into four parts. The first part consists of a list of the members of delegations and committees, and the officers and secretariat of the Conference. The second part gives a verbatim report of the proceedings, in which all speeches appear in both English and French. The third part contains twelve appendices, which include the documents and reports of the committees of the Conference, the texts of the Draft Conventions and Recommendations adopted by the Conference and the resolutions adopted by the Conference. The fourth part consists of the report of the Director, with a special table of its contents. As the English and French texts of the report have been printed separately, the text of the report contained in the volume supplied to readers using the English language is in English only. The volume also contains a detailed table of contents, an introduction, and an index to the second and third parts.

One important change has been made in the method of compiling the record. The report of the Director has hitherto consisted of two parts, the first dealing with the general activities of the International Labour Organization, and the second consisting of a summary of the annual reports submitted under Article 408 of the Treaty of Versailles; the first part referred to now appears as the fourth part of the record, while the summary of the annual reports will in future be printed separately.

## Care of Unemployed Young Persons in Germany

A committee of national scope, consisting of representatives of trade unions' welfare organizations, was recently formed in Germany by the General Federation of German Trade Unions, to carry out a program of relief work for unemployed young persons. In addition to financial aid the program calls for work to counteract the morally destructive effects of prolonged unemployment. For boys and girls just graduating from school and untrained boys and girls over school age the program recommends continued attendance at public schools, or at industrial, commercial, or domestic-science schools, where tuition should be either free or as inexpensive as possible. For unemployed apprentices the opening of practice workshops is proposed; for this purpose the workshops in the industrial schools and closed factories should be made available. In addition to vocational training, general education and athletics are considered necessary as well as recreation. The persons working should be

given in payment, room and board, necessary clothing, and a certain amount of pocket money. They should also be insured against sickness, accidents, and permanent invalidity.

According to the program, unemployed young people are to be engaged only on miscellaneous public work that otherwise would not be done, such as laying drainage pipes through village streets; repairing small bridges; laying out of footpaths through fields and woods; and care of playgrounds. Employment would also be given in making clothing, shoes, and other necessities. The use of closed factories is recommended for this purpose, and if necessary the owners should be compelled to give their consent for their use in this way. The articles so prepared are to be used for the young persons and for other unemployed. The work under this program is to be available only to persons under the age of 25 years, and enrolment is to be voluntary.

## UNEMPLOYMENT INSURANCE IN CANADA

### Recommendations of Montreal Council of Social Agencies submitted to Quebec Social Insurance Commission

THE Montreal Council of Social Agencies submitted to the Social Insurance Commission of the Province of Quebec during December a report which had been prepared by a special committee of the Council on the subject of unemployment insurance. (The subjects of old age pensions, health insurance and unemployment insurance are to be dealt with in the forthcoming final report of the Provincial Commission. The last reports of the Social Insurance Commission, dealing respectively with family allowances and industrial hygiene, were outlined in the *LABOUR GAZETTE*, August, 1932, page 861). The special committee of the Montreal Council of Social Agencies who prepared the report were as follows: Messrs. G. B. Clarke (chairman), G. P. Cosgrave, P. S. Fisher, Professor L. C. Marsh, Rev. David McLennan, R. W. Steele, Dr. F. G. Pedley, and L. St. J. Haskell (secretary). The complete report of the committee may be obtained from the Montreal Council of Social Agencies.

The main points which, in the opinion of the committee, should receive emphasis in the consideration of unemployment insurance, and the main features of the scheme recommended in their report, are summarized below:—

1. The maintenance of at least minimum standards for unemployment workers is a basic need, in the interests not only of individuals and their families, but of the community at large.

2. Unemployment insurance is designed not to take care of all relief problems, but to provide a means of stabilizing income against the fluctuations of the labour market for a major group of normal wage-earners.

The scope of a scheme may be wide or limited; but whatever its form, the need for adequate organization for the relief of destitution, for other problems of distress, and for abnormally prolonged unemployment, remains. The success of an unemployment insurance plan is contingent upon the existence of "relief at need" provisions.

3. Industrial policies of stabilization, direct relief provisions, relief works and other methods of alleviating unemployment, were considered by the Committee. All these things have their place, but are not considered by the Committee to do away with the need for unemployment insurance.

4. Unemployment insurance is called for because unemployment is a permanent risk of modern industry, not a risk confined to periods of trade depression alone. Moreover, while unemployment may be reduced by planning and management directed towards stabilization on the part of industrial concerns themselves, the degree of unemployment prevention which is attainable from such efforts is definitely limited.

#### Recommendations

The Committee therefore make the following recommendations:—

5. A scheme of unemployment insurance, planned to meet the particular conditions of Canada, should be initiated at as early a date as possible.

6. This scheme should be compulsory upon the parties to be included in its scope, if its coverage is to be in any sense comprehensive; with government participation in its administration.

7. The scheme should be co-ordinated so far as possible to operate on a Dominion-wide scale. Provincial and federal co-operation is therefore called for, along the lines which have already been accepted in the administration of the Canadian Employment Service, or in the initiation of such legislation as that on Old Age Pensions. "Government participation" above therefore means joint provincial and federal administration.

8. The scheme should be contributory, with the maintenance of an Unemployment Reserve Fund, upon which claims could be made in accordance with prescribed eligibility rules, as its main element.

9. Employers' and employees' contributions should be regarded as the main financial basis of the fund, and are to be approved on general principle. The case for governmental contributions (other than administrative expenses), may be regarded as a more open one, and subject to considerations of expediency.

10. Separate administrative provisions should apply, as far as is practicable, to three main groups of workers (a) industrial workers, (b) seasonal and mobile workers (other than agricultural workers), and (c) agricultural workers.

11. The maintenance of sound eligibility rules and maximum-benefit limits (subject to review of their adequacy) is essential to the success of the scheme.

12. Special attention should be given to all means, whether in the assessment of the employers' contributions, or in administrative co-operation, by which incentives towards the stabilization of employment can be provided.

13. It is highly desirable that extensions and improvements of the work of the Employment Exchanges should be visualized as

an essential part of the task of initiating the unemployment insurance scheme.

14. Finally, it is to be emphasized that the existence of unemployment insurance must not be allowed to obscure the continuous need for more fundamental measures designed to attack the underlying causes of unemployment and economic maladjustment.

## SPREADING EMPLOYMENT IN THE PULP AND PAPER INDUSTRY

THE methods adopted by the paper industry in Ontario and Quebec for spreading employment are described by the editor, Mr. A. R. Randall-Jones, in the December issue of *Pulp and Paper of Canada*. Mr. Randall-Jones notes that the effects of unemployment have been felt in different degrees in different sections of Ontario. Mills with a good employment record include several in the Niagara district, and at Thorold, Toronto, Trenton, Port Arthur, Napanee, Mille Roches, and Georgetown. These mills are stated to have maintained a tolerable scale of production during the depression. On the other hand, unemployment is acutely felt in many centres, and to meet this condition many companies having sufficient financial resources have been taking active measures to assist their unemployed workers. Examples of such action by various companies are given below:—

The Spruce Falls Power and Paper Company, Kapuskasing, is working a plan under which, if any worker, owing to short operation, draws less than a certain minimum amount in the way of wages in a month, his rent is proportioned in the same ratio in respect to the agreed rent, that his actual earnings for that month bear to his normal earnings.

At Iroquois Falls the Abitibi Power and Paper Company has cut the number of its machines in operation to three, but the attempt has been made, by resort to the six hour shift, to take care of as many as possible of all seven machines. In all its operating mills, the company has put in force the six-hour shift, with the object of giving employment to the maximum number of men. At the company's mill at Sault Ste. Marie, where there are four machines, all the latter are in operation and the six-hour shift is being worked—an arrangement that has made it feasible to take care of a very appreciable number of workers from some of its other mills that are at present inactive. The plant at Smooth Rock Falls is operating, but only to about fifty per cent of capacity. That at Pine Falls, Man., ran till last May but is now closed down.

"In all its company towns, such as Smooth Rock Falls, and Espanola, the Abitibi Company is able to provide its people with light and water free and also to permit them to continue living in its company houses. This has helped greatly. At Sturgeon Falls, practically the whole community is subsistent on government relief. St. Anne de Beaupré, Que., where Abitibi's St. Anne plant is located, contains a certain number of company houses which continue to be occupied, as before, by those who would normally be among the company's employees. In Fort William also, while not a company town—being the location of several other industries—the same condition applies.

"Respecting the mill of the Great Lakes Paper Company, at Fort William, the recent announcement that this has its tonnage requirements met for next year would, presumably, imply that unemployment among the workers normally employed thereat need not be apprehended. The plan of Kenora Paper Mills, Ltd., is again in operation at present, and there are some special opportunities at Kenora for giving gainful occupation in other directions which may be expected to relieve the situation there to a not inconsiderable extent. The mills of the Fort Frances Pulp and Paper Company, Ltd., have been working intermittently. Fort Frances is not entirely dependent on these, as there are other industries in the town, but as these partly consist of lumbering and saw-mills, how far this circumstance will help out the situation looks problematical.

"In general," Mr. Randall-Jones continues, "it may be said that the policy of giving employment to the largest possible number of workers who are out of jobs is being pursued throughout the industry in Ontario. The butter, in a good many instances, has to be spread rather thinly on the bread, but the endeavour has been to make it go round as well as is practicable. It is a wise policy, and a right one, and is being abundantly justified by results. It has done much to keep heart and hope alive in large numbers of men

who, through no fault of their own, are passing, with their families, through a period of great physical strain, to say nothing of a mental anxiety which no person of right feeling can think of without compassionate sympathy. But in places where mills are closed, and the companies are unable, for reasons of which we are all aware, to help out to more than a very limited extent, the position is grievous. Such maintenance work as can be given at these idle plants is but little more than a drop in the bucket. All that remains is governmental relief. Sometimes this is given in the form of road work and so forth. But more generally in the form of direct subsistence and this is (perhaps inevitably) of a meagre kind."

Speaking of the excellent spirit shown by the man out of employment, the writer refers to the action of the workers in pulp and paper mills in some of the towns in the Niagara district last winter. "As has been said, in that district unemployment has not been formidable among this class of workers. On the other hand, there is quite a lot of it among workers in several other industries. Accordingly, the workers in the paper mills at Merriton arranged voluntarily to subscribe a certain portion of their weekly pay towards funds raised by the municipality for the relief of the necessities of workers in other industries, who found themselves jobless, and their dependants. While I have spoken of Merriton, I have done so by way of example. The same course was, in point of fact, taken by pulp and paper workers in other towns of the district named. I understand that it is likely that similar action will be taken this winter."

### Examples of Relief Methods

Some of the plans for relief of unemployment that are in effect are described as follows:—

The Anglo-American Pulp and Paper Company conducted a successful relief plan at these mills at Limoilou (Quebec) last year. It will be followed also this year, except that instead of going to each parish for families as was done last year the committee will take care first of all men laid off with families, or supporters of families, and if funds permit will take on others. Appropriate lists were prepared and every employee of the organization was canvassed and those who could, voluntarily subscribed either in a lump sum or a certain weekly figure to be deducted from their wages, with the result that a weekly definite amount of around \$150 was assured. When the committee knew how much money they had to spend weekly two members were delegated to interview the Clergy of the

different parishes in Limoilou to inform them they could take a number of families off their hands for the winter months. The families turned over to the committee for help received complete support in the way of provisions and firewood. The average number of persons fed weekly from the period of November 21, 1931 to June 11, 1932, was 167. These families were visited regularly every week by the different representatives of the Relief Committee to see how the families were getting along, so that they could report the results of their visits at the regular meeting which was held on Friday of each week. By handling things in this manner the committee knew exactly whether each family was receiving a sufficient amount of provisions to see them through weekly, and also if there was any sickness. Every week envelopes were prepared for each family containing coupons negotiable at a certain store in Limoilou worth a certain amount of money for their provisions for the following week. The committee also made a general canvass throughout the mill for old clothing, and quite a large quantity was collected. The old clothing was distributed to families in need; also old wet felts were given out for blankets.

"The outstanding feature of this relief work undertaken by the employees," it is stated, "is that the men who have organized this and carry the work out during the winter months are doing it entirely on their own time, and a great deal of time and effort must be given to this work in order to see that it is successfully carried out in every detail."

"Last year the committee had as many as 32 families to take care of, but the average number of families fed weekly was 23 families for the period from November 21, 1931 to June 11, 1932. During this period disbursements amounted to \$3,233.89. The average weekly cost per family per week was \$4.68½; and the average weekly cost per person per week was \$0.64½. The mill doctor's contribution towards this good work was free medicine and free medical attention whenever necessary. The average health of those assisted improved noticeably during the winter.

Another Quebec community that has had much experience in unemployment relief is Port Alfred. The closing of the plant during 1931 necessitated action on the part of Consolidated Paper Corporation. Relief, or rather prevention, of distress, was undertaken promptly, irrespective of what local or provincial governments might subsequently do. The organization of the work under the direction of the plant staff, Port Alfred division, was so well done, and the administration of the plan so effective and economical, that

provincial authorities complimented the company by saying that it could not possibly be otherwise done for anything like the Company's costs. The committee in charge of the work listed thirty essential items of diet, and with the assistance of a competent authority calculated the amounts required for families of different sizes: up to 3; 4 and 5; 6 and 7; 8 and 9; and 10 and over. The work began prior to 1931 and continued up to the resumption of operations at the mill last spring. The average costs decreased practically 20 per cent during the year. The September costs for families of sizes given were, per week: \$3.33; \$3.86; \$5.22; \$6.30; \$7.95. This does not include other necessities such as rent, fuel, clothing, or medical attention, but in these also the Company's committee gave helpful assistance apart even from the considerable expense assumed on this account.

The Howard Smith Paper Mills, Limited, have put into effect the 6-hour shift, or its equivalent, each man on eight hour shifts taking one week off in every four. The six hour shift is considered to be the better

arrangement, as the latter does not work out as fairly for each individual. The six hour shift is now in force in the groundwood mill but has not yet been extended further. In some instances the employees when approached on the matter were not completely in favour of it. It was calculated that if six hour shifts were used at the Howard Smith Paper Mills, Cornwall Mill, men would be put to work there as a result of this policy.

Another scheme now being worked out by the same company is in connection with certain departments such as the steam plant, watchmen, etc. which have fairly steady work—in some cases seven days a week. It is now being estimated how many additional workers might be taken on in these departments by a reduction in the number of hours worked by each man to a maximum of around 48 hours. In the steam plant, or in the case of the watchmen, some men work as many as 84 or 91 hours a week, and it is under consideration to reduce this somewhat so that additional men may be taken on.

## EFFECT OF DEPRESSION ON PRIVATE UNEMPLOYMENT INSURANCE PLANS IN U.S.A.

THE United States Bureau of Labour Statistics, at the request of the Senate Committee on Unemployment Insurance, recently made a study of the recent operation of company and trade union plans for the payment of unemployment benefits. The conclusions reached by this inquiry, which are given in the *Monthly Labour Review*, December, 1932, show that for the most part the various plans had been seriously affected by the depression. Most of the funds have been maintained only with the greatest difficulty, and several have had to be given up or suspended. However, in spite of the fact that the lowered incomes of the funds have not permitted the payment of benefits adequate to the needs of the beneficiaries, the funds are considered to have been of very great assistance and there is a general desire to keep them in operation.

Among company plans investigated were those of the Dennison Manufacturing Company, of Massachusetts (LABOUR GAZETTE, April, 1931, page 423); the Columbia Conserve Company, of Indianapolis; the Dutchess Bleachery, of Wappingers Falls, N.Y.; Crocker-McElwain Company, and Chemical Paper Manufacturing Company, Holyoke, Mass.; John A. Manning Paper Co., Troy, N.Y.; Behr-Manning Corporation; S. C. Johnson & Son, Racine, Wis.; Leeds and Northrup, Philadelphia; and Pro-

ctor & Gamble, Cincinnati, Ohio (LABOUR GAZETTE, October, 1930, page 1118).

"Even in cases where comparatively restricted benefits are paid," it is stated, "the survey shows that the depression has put such a strain on the funds that in most instances they have been maintained only with the greatest difficulty. Three of the company plans have been definitely given up. In two cases, that of the Brown & Bailey and the Leeds & Northrup companies, both of Philadelphia, the benefit fund was exhausted, and it was impossible to build it up under present conditions. In both of these companies, however, the plans are regarded as having been of great service while they were functioning, and it is planned to re-establish them when conditions improve. In the third plan, that of the Consolidated Water Power & Paper Co., Wisconsin Rapids, Wis., the employment guaranty for permanent employees, established in 1929, had been discontinued, but the firm expected to submit a plan to the Wisconsin Industrial Commission in compliance with the provisions of the unemployment insurance law of that State (LABOUR GAZETTE, March, 1932, page 323; April, page 380). Another fund, that of the Dennison Manufacturing Co., Framingham, Mass., was practically exhausted, and the plan of the United Diamond Works

(inc.), Newark, N.J., which suspended operations in 1931, had not been resumed. At the present time, therefore, there are 14 company plans, including the 2 established in 1932, which are still in operation.

"Three of the joint agreements for the payment of unemployment benefits have been discontinued. In the case of the United Wall Paper Crafts and their employees, the unemployment-benefit provision was included for the last time in the agreement signed in 1929, and in the full-fashioned hosiery industry a similar provision was omitted from the general trade agreement concluded in September, 1931. The joint agreement of the Wilkes-Barre Lace Co., and the local branch of the Amalgamated Lace Operatives of America was dissolved in the fall of 1931, but the unemployment benefit plan was continued by the local. Two other agreements in the lace industry, although not officially given up by the companies, were being maintained by the members of the locals, the companies having ceased payments to the funds.

"Four trade union plans have been discontinued since the spring of 1931, while many others have been able to continue only through the increase of assessments and reduction in the amount of benefits. In many cases the money was being paid out in benefits practically as fast as it was collected, and the limitation on the benefit period which is commonly found in the plans had been disregarded in the majority of cases and benefits were being paid to the limit of the ability of the funds to meet the extended payments.

"In general it may be said that the payments from all types of funds, particularly as they have been reduced as the result of the lowered incomes of the funds, have not been adequate to meet the financial needs of the beneficiaries, although they have undoubtedly been of very great assistance. This is clearly indicated by the practically universal desire to continue the benefit funds and by the efforts which have been exerted to keep them in operation."

### Joint Agreement Plans

Accounts of the unemployment insurance plans under joint agreements in the men's clothing industry in the United States have appeared in the *LABOUR GAZETTE* from time to time (June, 1930, page 677, etc.), with particular reference to those in effect at Chicago, New York and Rochester. The *Monthly Labour Review* gives the following account of the working of these plans.

*Men's Clothing Industry, Chicago.*—"The joint agreement between employers and the Amalgamated Clothing Workers of America

in the Chicago market provides for an unemployment insurance plan for union employees engaged in the production of men's clothing in union shops. The agreement providing for unemployment insurance was signed in 1923, and payments into the fund were first made in that year. Union members who are employed in shops covered by the agreement are required to participate in the plan. Contributions to the unemployment benefit fund amount to 1½ per cent of the earnings of the union members while employers contribute at the rate of 3 per cent of the pay roll. In order to be eligible for benefits members must be in good standing in the union, must be registered in the union employment office, and have paid regular contributions up to 10 payments for each week to each week and a half of benefit payable (depending upon the number of weeks granted in the particular shop where the person is employed). . . . The duration of the benefit period is fixed by the respective boards of trustees and the impartial chairman, and benefits are paid approximately as follows: For 3 weeks in the smaller inside shops, for 2 to 2½ weeks in the majority of shops, and for 1 to 1½ weeks in a small number of shops. A person may receive benefits for only 1 week for every 10 contributions to the fund in a given season if he works in a shop where benefits are granted for 2 to 2½ weeks, and for 1 and 1½ weeks for every 10 contributions if he works for a firm which grants 3 weeks of benefits. . . .

"Because of the continued unemployment of members who had exhausted their rights to benefit, special benefits were paid in 1930 and 1931. In 1930 the benefits were paid for a maximum of four weeks at the rate of \$10 per week. Late in 1930 and in 1931 special assessments amounting to \$8 per person for those who were working allowed the payment of additional benefits to unemployed members. These payments were made, to members who had been out of work for three months or longer, at the rate of \$5 per week for single persons and \$7.50 for married persons.

"The number of firms covered by the plan in December, 1926, was 206 and the number of union members covered was 19,000. In April, 1931, the number of firms had been reduced to 142 and in May, 1932, to 106, while the number of union members covered during the past two seasons was approximately 13,500. For the season November, 1930, to May, 1931, there were 13,266 claims paid, the total benefits amounting to \$352,297.81. From May, 1931, to November, 1931, the claims numbered 12,795, and the benefits paid amounted to \$307,072.50, while in the season November, 1931, to May, 1932, the figures were 12,000

and \$254,098.26, respectively. The average benefits ranged from \$26.55 in the season ending in May, 1931, to \$21.17 for the season ending in May, 1932. The balance in the fund at the end of the last season was \$424,314.45."

*Men's Clothing Industry, New York.*—"The joint agreement providing for a system of unemployment benefits, which was adopted in 1928 by the employers manufacturing men's clothing in New York City and the Amalgamated Clothing Workers of America, was renewed on July 1, 1931, for a period of two years. The plan provides that union members on the pay rolls of employers who are parties to the agreement are automatically covered by the plan. No contributions are required from employees; the plan is financed entirely by inside-shop employers' contributions equal to 1½ per cent of the total union pay roll in their establishments, and in addition the manufacturers are required to contribute 1.2 per cent of the amounts paid to contractors.

"As the unemployment benefit plan was started such a short time before the depression set in there was not time to build up a reserve and therefore no actual reserve has been set aside, although a balance has been maintained in the fund. A person is eligible for benefits if he is involuntarily unemployed on account of lay-off or short time and if he is in good standing in the union, although during the depression members have been considered in good standing even though far in arrears in their dues to the union. The maximum benefit allowable under the plan is \$30 in each benefit period, or a total of \$60 for the two benefit periods in the year. The benefits amount to \$10 per week for a maximum of six weeks in any one year.

"The number of firms covered by the plan in 1928, was 400, rising to a maximum of 430 firms in 1929 and dropping to 390 in September, 1932. The number of union members was approximately 25,000 in 1928 and 1929 and approximately 22,000 from April, 1930, to September, 1932. The number receiving benefits in 1929 ranged from 3,300 in April to 6,400 in November; in 1930 the figures were 8,700 and 9,000 respectively; in April, 1931, 6,000 received benefits; and from October, 1931, to September, 1932, 8,600. The total benefits paid from 1928 to September, 1932, amounted to \$700,000, the average benefit ranging from \$22.72 in the season ending in April, 1929, to \$15 in the different periods in 1931 and 1932. The balance in the fund available for distribution in benefits in September, 1932, amounted to \$90,044.11. The administrative

expense is about 10 per cent, and the funds for this purpose are kept in a separate account."

*Men's Clothing Industry, Rochester.*—"The joint agreement signed in 1928 by a group of men's clothing manufacturers, members of the Clothiers' Exchange of Rochester, N.Y., and the Amalgamated Clothing Workers of America provides for the establishment of a fund for the payment of unemployment benefits. Payments into the fund were first made July 1, 1928, and the first regular benefits were paid May 1, 1930. In order to be eligible for benefits a worker must have been in good standing in the union for at least one year immediately prior to applying for the benefit. Contributions of 1½ per cent of the weekly earnings of each of their union employees by the employers have been the only source of funds. The agreement provided that employees should contribute 1½ per cent of their weekly earnings; also, beginning, May 1, 1929, one year after the agreement went into effect, but by mutual consent of the employers and the union, the employee contributions have been waived until such time as economic conditions will warrant these payments. Persons receiving benefits must be involuntarily unemployed and must not have refused suitable employment nor have exhausted their right to benefit. The benefit rate and period are subject to revision each season according to the amount of money available in the fund. The benefit period in the season ending December 1, 1930, was 2½ weeks and the maximum amount of benefit a person might receive in a season at that time was \$31.25. During the season ending June 1, 1932, the benefit period was reduced to two weeks. This is the only change which has been made in the plan (during the past year). In 1930 there were approximately 8,000 union members covered by the plan, and in the last season of that year \$115,000 was paid in benefits. Information as to the number entitled to benefits and the disbursements for 1931 and 1932 was not available."

The article in the *Monthly Labour Review* also describes the organization and present standing of the joint agreement plans in the women's garment industry at Cleveland, Ohio; the cloth hat and cap industry, New York and Philadelphia; the straw hat industry, New York; the full-fashioned hosiery; the lace curtain industry at Kingston, N.Y., and at Philadelphia; the lace industry at Scranton, and Wilkes-Barre, Pa.; the leather goods industry, and the wall-paper industry.

## EMPLOYMENT AND UNEMPLOYMENT IN CANADA IN NOVEMBER, 1932

THE following information as to the employment situation in Canada is based upon report from four sources:—

(1) The Dominion Bureau of Statistics receives reports each month from most of the larger employers of labour throughout Canada in all industries except agriculture, fishing, hunting and highly specialized business, the returns being from firms employing fifteen workers or more. The number of firms so reporting on December 1, was 8,061, the employees on their payrolls numbering 765,441 persons.

(2) The Department of Labour receives reports from local trade unions throughout Canada, showing the number of their members who were unemployed in the period under review. The number of unions reporting for November was 1,797, having an aggregate

membership of 161,058 persons. It should be understood that the report on the number of unemployed workers refers only to organized labour, definite figures not being available as to the number of unorganized workers who were without employment during the period reviewed.

(3) The Department of Labour receives reports from the 66 offices of the Employment Service of Canada showing the number of applications for work, the existing vacancies and the number of workpeople placed in positions.

(4) The Dominion Bureau of Statistics receives each month detailed statistics from 61 cities throughout Canada, showing the value of permits granted during the period for various classes of building construction, these figures indicating the degree of activity prevailing in the building trades.

### (1) Employment Situation at the beginning of December, 1932, as reported by employers

The seasonal falling-off in employment recorded on December 1, 1932, was on a much smaller scale than on the same date last year, and was also less than the average decline recorded at the beginning of December in the last eleven years. The 8,061 firms reporting their payrolls to the Dominion Bureau of Statistics employed 765,441 persons on December 1, compared with 779,015 in the preceding month. Reflecting this decrease of some 1·5 points, the index, based upon the 1926 average as 100, stood at 83·2, compared with 84·7 on November 1, 1932, and 99·1 on December 1, 1931. On the same date in the ten preceding years, the index was as follows: 1930, 108·5; 1929, 119·1; 1928, 116·7; 1927, 108·1; 1926, 102·3; 1925, 96·5; 1924, 91·9; 1923, 96·9; 1922, 96·3 and 1921, 88·3. After correction for seasonal influences, the December 1 index number showed a fractional increase over the November 1 figure.

Large losses were indicated in construction, and there were smaller reductions in manufacturing, transportation, mining and services. On the other hand, considerable seasonal improvement was reported in logging and trade, and shipping also afforded increased employment. Within the manufacturing group, improvement took place in rubber, tobacco and iron and steel plants; the gains in the metal trades were mainly due to the resumption of operations in large railway car shops which had been closed for a few weeks.

### Employment by Economic Areas

The five economic areas registered curtailment, the largest recessions taking place in the Prairie Provinces and British Columbia.

*Maritime Provinces.*—The seasonal declines noted in the Maritime Provinces were on a rather smaller scale than on December 1, 1931, but the index of employment was then much higher; this was partly owing to the considerable volume of unemployment relief work then being afforded. Most of the reduction this year took place in construction, although manufacturing was also slacker. On the other hand, logging, coal-mining, shipping and retail trade reported improvement. Data were received from 583 firms employing 53,335 persons, as against 60,393 on November 1.

*Quebec.*—There was a further falling-off in activity in Quebec, according to statements from 1,970 employers of 223,987 persons, or 1,967 fewer than in the preceding month. Construction work decreased, and there was also curtailment in manufacturing (notably of leather, lumber and textile products), and in services and mining. On the other hand, iron and steel plants were decidedly busier, largely as a result of the resumption of work in large railway car shops closed some weeks previously. Rubber, tobacco and beverage factories, logging, transportation and retail trade also showed improvement, mainly of a seasonal character. Much larger losses were

recorded on December 1, 1931, when employment was in decidedly greater volume.

*Ontario.*—Employment in Ontario showed a small contraction, 220 workers being released during November by the 3,568 firms whose statistics were received, and who had 315,362 on their payrolls. Retail trade and logging registered marked seasonal gains, and considerable improvement was indicated in iron and steel, rubber and tobacco and beverage factories, while the extension of unemployment relief undertakings provided work on the highways for a large number of extra persons. The lumber, food, textile, clay, glass and stone and electrical apparatus, transpor-

transportation, construction and manufacturing reported decreased employment; within the last-named, the food, textile, clay, glass and stone and iron and steel divisions showed the greatest reductions. Employment at the beginning of December was at a much lower level than on the same date in 1931, although the losses then indicated had been on a very much larger scale, due to the completion of certain unemployment relief works.

*British Columbia.*—Continued shrinkage involving a smaller number of workers than that noted on December 1, 1931, was shown in British Columbia, where the 773 reporting firms had 60,114 employees, as compared with

### EMPLOYMENT IN CANADA AS REPORTED BY EMPLOYERS

NOTE.—The curve is based on the number of employees at work on the first day of the month as indicated by the firms reporting, in comparison with the average number of employees they reported during the calendar year 1926 as 100.

tation and building and railway construction industries, however, showed curtailment. The index was lower than in the same month of last year, when the movement had been upward, largely owing to unemployment relief projects.

*Prairie Provinces.*—Further marked declines were indicated in the Prairie Provinces on the date under review; the 1,167 reporting employers had let out 6,101 workers, reducing their staffs to 107,643 on December 1. Retail trade, communications and logging were more active. On the other hand, wholesale trade,

63,342 in their last statement. Food, lumber and pulp and paper factories were slacker, as were construction, mining and transportation. Activity was generally less than on the same date in 1931.

Table 1 gives index numbers by economic areas.

### Employment by Cities

Of the eight centres for which separate tabulations are made, Montreal and Windsor and the adjacent Border Cities showed improvement as compared with November 1, while lessened activity was reported in Que-

bec City, Toronto, Ottawa, Hamilton, Winnipeg and Vancouver.

*Montreal.*—There was an increase in the employment afforded by the 1,119 cooperating firms, whose staffs were enlarged by 476 persons to 125,278 at the beginning of December. Manufacturing showed heightened employment, largely owing to the reopening of important railway car shops which had been

closed down for some weeks. Tobacco factories also reported improvement. Retail trade was seasonally active, and employment increased about the port in preparation for the winter shutdown. On the other hand, construction registered considerable losses and the service group was also slacker. Greater gains had been noted on the same date last year, and employment then was generally brisker.

NOTE.—The "Relative Weight" in Table I, shows the proportion of employees in the indicated area to the total number of all employees reported in Canada on the date under review.

TABLE I.—INDEX NUMBERS OF EMPLOYMENT BY ECONOMIC AREAS,

(AVERAGE CALENDAR YEAR 1926=100)

|   | Canada | Maritime<br>Provinces | Quebec | Ontario | Prairie<br>Provinces | British<br>Columbia |
|---|--------|-----------------------|--------|---------|----------------------|---------------------|
| Dec. 1, 1921.....   | 88.3   | 100.4                 | 79.8   | 91.5    | 94.9                 | 78.9                |
| Dec. 1, 1922.....   | 96.3   | 103.4                 | 89.5   | 100.5   | 100.8                | 84.8                |
| Dec. 1, 1923.....   | 96.9   | 102.3                 | 93.9   | 99.5    | 98.6                 | 86.7                |
| Dec. 1, 1924.....   | 91.9   | 89.0                  | 90.8   | 94.1    | 91.1                 | 88.7                |
| Dec. 1, 1925.....   | 96.5   | 93.7                  | 93.9   | 98.6    | 96.7                 | 96.7                |
| Dec. 1, 1926.....   | 102.3  | 95.5                  | 102.7  | 103.1   | 104.7                | 100.0               |
| Dec. 1, 1927.....   | 108.1  | 99.1                  | 110.1  | 109.1   | 110.8                | 101.0               |
| Dec. 1, 1928.....   | 116.7  | 108.1                 | 112.6  | 119.7   | 125.3                | 107.9               |
| Jan. 1, 1929.....   | 109.1  | 103.3                 | 103.3  | 113.8   | 116.6                | 100.4               |
| Feb. 1.....   | 110.5  | 104.6                 | 105.9  | 117.0   | 113.1                | 98.4                |
| Mar. 1.....   | 111.4  | 106.8                 | 104.7  | 118.4   | 112.3                | 103.7               |
| Apr. 1.....   | 110.4  | 107.5                 | 101.1  | 117.4   | 113.9                | 108.0               |
| May 1.....  | 116.2  | 108.3                 | 107.5  | 123.8   | 119.7                | 111.6               |
| June 1.....   | 122.2  | 112.5                 | 115.9  | 126.2   | 132.4                | 117.5               |
| July 1.....   | 124.7  | 117.9                 | 119.4  | 127.2   | 136.7                | 118.2               |
| Aug. 1.....   | 127.8  | 127.5                 | 121.3  | 128.0   | 144.8                | 122.7               |

| Relative Weight of Employment by Districts<br>as at Dec. 1, 1932..... | 100.0  | 7.6                   | 29.3   | 41.2    | 14.1                 | 7.8                 |

*Quebec.*—Industrial activity in Quebec City declined, 371 workers being laid off by the 152 employers whose returns were received, and who had 11,970 employees on December 1. The largest contractions were in manufacturing, mainly in leather factories, while other groups showed only slight changes. A larger recession had been indicated on the same date in 1931, but the index then was higher.

*Toronto.*—Continued decreases in personnel were recorded in Toronto by 1,209 firms who employed 109,188 persons, as compared with 110,847 at the beginning of November. Trade showed noteworthy improvement, but textile, electrical apparatus and other manufacturing establishments, transportation and construction reported reductions. Smaller losses had been registered on December 1 of last year,

**NOTE.**—The "Relative Weight" in Table II shows the proportion of employees in the indicated city to the total number of all employees reported in Canada on the date under review.

TABLE II.—INDEX NUMBERS OF EMPLOYMENT BY PRINCIPAL CITIES

(AVERAGE CALENDAR YEAR 1926=100)

and the volume of employment was then greater.

*Ottawa.*—Moderate curtailment was shown in Ottawa, chiefly in manufactures and transportation; 156 employers recorded a combined payroll of 11,796 workers, as against 11,969 in their last report. Employment was not so active as at the beginning of December, 1931, although much larger losses had then been indicated.

*Hamilton.*—A decline occurred in Hamilton, where an aggregate working force of 24,001 persons was employed by the 237 firms furnishing data, who had 24,476 employees on their November 1 staffs. Manufacturing as a whole was slacker, in spite of moderate gains in iron and steel; the losses in the food group were most pronounced. In the non-manufacturing division, highway construction also showed curtailment, while other indus-

NOTE.—The "Relative Weight" in Table III shows the proportion of employees in the indicated industry to the total number of all employees reported in Canada on the date under review.

| Oct. 1.....   | 86.7           | 84.1          | 28.4    | 98.2   | 91.2           | 87.2           | 84.3         | 109.8    | 114.5 |
| Nov. 1.....   | 84.7           | 81.7          | 37.9    | 101.2  | 89.6           | 84.5           | 77.9         | 106.5    | 115.4 |
| Dec. 1.....   | 83.2           | 80.3          | 56.2    | 99.9   | 89.3           | 83.9           | 67.6         | 103.7    | 117.8 |
| Relative Weight of Employment by Industries as at Dec. 1, 1932..... | 100.0          | 52.1          | 2.0     | 5.9    | 3.1            | 12.9           | 10.2         | 2.6      | 11.2  |

tries reported only small changes. The index was many points lower than on the same date of a year ago, when a greater reduction had been noted.

*Windsor and the Adjacent Border Cities.*—There was an increase in the Border Cities,

mainly in iron and steel plants. Statements were tabulated from 136 employers with 8,151 workers, or 187 more than in the preceding month. Advances had also been indicated on December 1, 1931, but employment was then at a rather higher level.

TABLE IV.—INDEX NUMBERS OF EMPLOYMENT BY INDUSTRIES (AVERAGE 1926=100)

| Industries                                | Relative weight | Dec. 1, 1932 | Nov. 1, 1932 | Dec. 1, 1931 | Dec. 1, 1930 | Dec. 1, 1929 | Dec. 1, 1928 | Dec. 1, 1927 |
|---|-----------------|--------------|--------------|--------------|--------------|--------------|--------------|--------------|
| <i>Manufacturing</i> .....                | 52.1            | 80.3         | 81.7         | 89.6         | 100.6        | 112.8        | 112.9        | 104.3        |
| Animal products—edible.....               | 2.3             | 95.0         | 98.2         | 99.0         | 102.9        | 110.1        | 112.2        | 109.6        |
| Fur and products.....                     | 2               | 81.0         | 87.0         | 82.5         | 101.2        | 90.2         | 90.8         | 103.2        |
| Leather and products.....                 | 2.3             | 86.7         | 89.3         | 84.6         | 81.5         | 94.3         | 93.9         | 105.8        |

<sup>1</sup> The "Relative Weight" column shows the proportion that the number of employees in the indicated industry is of the total number of employees reported in all industries by the firms making returns on the date under review.

*Winnipeg.*—Employment decreased in Winnipeg, according to data received from 395 firms employing 34,315 persons, as compared with 35,310 on November 1. A large reduction took place in manufacturing, chiefly in iron and steel; telephones showed heightened activity, while the changes in other industries were comparatively slight. The index was lower than on the same date last year, when the change in employment had been small.

*Vancouver.*—There was also a contraction in Vancouver, according to 339 employers of 26,413 workers, or 637 fewer than on November 1. Manufacturing and construction were slacker. A larger reduction had been recorded at the beginning of December, 1931, but the index was then higher.

Index numbers by cities are given in Table II.

### Employment by Manufacturing Industries

A decrease in employment occurred in manufacturing establishments, 4,939 of which employed 398,546 operatives, compared with 405,329 on November 1. This decline was rather less than the average recorded in the ten years 1921-1930, so that after correction for seasonal movement, the index showed a slight increase over that for November 1. Tobacco, rubber and iron and steel works recorded heightened activity; the increase in the metal group was largely due to the re-opening of the railway car shops closed down a few weeks previously. General losses were reported in other branches of factory employment, those in the lumber, food, pulp and paper and textile divisions being most pronounced. Improvement had been indicated at the beginning of December of a year ago, and the index was then higher.

*Animal Products—Edible.*—There were further declines in fish canneries, meat packing plants and dairies, these declines being largely seasonal in character. The result was a reduction of 554 in the staffs of the 227 firms making returns, who had 17,254 employees. This decrease involved a somewhat greater number of persons than that recorded on the same date in 1931, when employment was at a rather higher level.

*Leather and Products.*—Employment in this industry showed a considerable loss at the beginning of December, almost entirely in boot and shoe factories. Statements were tabulated from 254 manufacturers, employing 17,545 persons, as compared with 18,033 on November 1. Larger reductions had been noted on December 1, 1931, and the index was about two points lower than on the date under review.

*Lumber and Products.*—Seasonal curtailment of operations on a larger scale than at the be-

ginning of December, 1931, occurred in this group; the losses took place chiefly in rough and dressed lumber mills, but container and furniture factories also reported reductions in payrolls. All except the Prairie Provinces shared in the downward movement. Data were received from 747 firms in this industry, whose staffs declined from 28,339 workers on November 1 to 26,137 on December 1. The index was considerably lower than on the same date a year ago.

*Musical Instruments.*—A further decrease was noted in musical instrument factories, according to returns from 37 manufacturers with 1,282 employees, or 134 fewer than at the beginning of November. Gains had been recorded on the corresponding date a year ago, and employment was then more active.

*Plant Products—Edible.*—Contractions, recorded chiefly in the canning division of the vegetable food group, produced a seasonal reduction of 2,546 employees in the 395 plants from which returns were received, and which reported a combined working force of 29,322 operatives. Curtailment was indicated in four of the five economic areas, there being practically no change in Quebec. The volume of employment on December 1, 1931, was larger; the losses then noted were much less extensive.

*Pulp and Paper.*—Statements were received from 560 manufacturers in the pulp and paper industry, whose payrolls were decreased by 1,107 persons to 51,864 at the beginning of December. Employment was not so brisk as on the same date in 1931, when a small increase had been noted. Improvement took place in printing and publishing establishments, while pulp and paper works released employees. Reductions in personnel were shown in all except the Prairie Provinces, where practically no change took place on the whole.

*Rubber Products.*—A considerable gain in activity was reported in the rubber group. This took place mainly in Quebec and Ontario. The working forces of the 43 co-operating establishments stood at 10,694, compared with 10,207 on November 1. A decrease had been shown on the corresponding date in 1931, but the level of employment was then higher.

*Textile Products.*—There was a seasonal recession in employment in these industries, chiefly in the clothing trades, although cotton and headwear mills were also slacker. Returns were compiled from 858 manufacturers employing 81,657 workers, or 2,463 fewer than in the preceding month. There was a much smaller loss at the beginning of December, 1931, but the index was then over two points lower.

*Tobacco, Distilled and Malt Liquors.*—Employment in tobacco factories increased, but other divisions of this group showed curtailment. An aggregate payroll of 15,677 persons was indicated by the 150 co-operating firms, compared with 14,105 at the beginning of November. Smaller gains had been shown on the same date in 1931, when the index was several points lower.

*Clay, Glass and Stone Products.*—Further seasonal reductions occurred in brick, glass and stone work; 771 persons were released by the 184 co-operating manufacturers, who had 5,890 on their payrolls. Quebec, Ontario and the Prairie Provinces recorded most of the shrinkage. A downward tendency was also in evidence on December 1, 1931, but the volume of employment was then greater.

*Electric Current.*—There was a decrease in employment in electric current plants, 89 of which reported 13,575 employees, or 132 fewer than in the preceding month. The loss occurred mainly in Quebec. A reduction had also been reported at the beginning of December, 1931, when the index number was higher.

*Electrical Appliances.*—Curtailment was noted in electrical apparatus plants; 93 manufacturers employed 10,748 persons, as compared with 11,500 in their last report. Employment on December 1, 1931, was higher than on the date under review; the trend was then upward.

*Iron and Steel Products.*—A considerable advance was noted in iron and steel factories, chiefly in the railway car division as result of the reopening of large shops closed some weeks before; automobile, machinery, rolling mill and agricultural implement works, however, were also busier. On the other hand, structural iron and steel, heating appliances and steel shipbuilding showed curtailment. There was an increase of 3,236 in the staffs of 774 co-operating manufacturers, who employed 78,703 workers. Employment improved in Quebec and Ontario. The general level of activity in this group was lower than on the same date in the preceding year, when a greater gain had been indicated.

*Non-Ferrous Metal Products.*—There was a decrease in employment in this division at the beginning of December, according to data received from 131 employers of 12,372 persons, as compared with 12,794 in the preceding month. Most of the loss took place in smelters and refineries. The index was lower than on December 1, 1931, improvement having then been registered.

### Logging

Continued advances were shown in logging, in which there were general increases except in British Columbia. Statements were tabulated

from 223 logging camps having 15,416 employees, or 5,098 more than in their last report. This expansion involved a much larger number of persons than that recorded on December 1, 1931, but the index was then many points higher.

### Mining

*Coal.*—Employment in coal mines decreased slightly at the beginning of December, 126 persons being released from the payrolls of the 88 co-operating operators, who had 25,069 employees. The Western Provinces reported the decline, while increases were indicated in the Maritime coal fields. An advance had been reported on the corresponding date in 1931, and the index number then was higher.

*Metallic Ores.*—There was a minor reduction in employment in metallic ore mines; 56 workers were laid off since November 1 by the 67 employers from whom information was received, and who had 15,831 persons on their pay lists. A larger decline had been indicated in December, 1931, when the number engaged by the firms reporting in this division was practically the same.

*Non-Metallic Minerals other than Coal.*—Further contractions in employment were noted in this industry, in which 76 firms furnished data showing that they had employed 4,290 persons, as compared with 4,645 on November 1. Conditions were not so good as in the same month of 1931; only a slight change had then been noted.

### Communications

Decreases in personnel were noted on telegraphs, but telephones showed improvement. On the whole, 74 persons were released from the payrolls of the co-operating companies and branches, which had 23,466 employees on the date under review. The index was lower than in the early winter of 1931, although greater curtailment had then been noted.

### Transportation

*Street Railways and Cartage.*—Employment in this division was seasonally quiet in all provinces. Data were compiled from 174 firms whose staffs declined from 25,228 on November 1 to 24,676 at the beginning of December. This loss was rather less pronounced than that recorded on the same date in 1931, but the index then was fractionally higher.

*Steam Railways.*—The trend of employment in railway operation was downward, 100 employers and branches reporting 57,976 workers, as compared with 59,237 in the preceding month. The greatest decrease was in Ontario and the Prairie Provinces. The index number

was lower than on December 1, 1931, when larger reductions had been indicated.

*Shipping and Stevedoring.*—Improvement was registered in shipping; an increase of 1,150 persons was reported by the 88 co-operating employers, whose staffs aggregated 16,388. Smaller increases had been noted on December 1, 1931, but the index then was between two and three points higher.

### Construction and Maintenance

*Building.*—Employment in building construction showed a seasonal falling-off from the preceding month. Statements were compiled from 653 contractors employing 14,964 persons, as compared with 17,021 on November 1. The most extensive curtailment was in Quebec and Ontario, although the recession was general except in the Maritime Provinces. Much greater shrinkage was reported on December 1, 1931; nevertheless employment was then more active.

*Highway.*—Important decreases were noted in the staffs of the 339 highway contractors furnishing statistics, who employed 40,271 workers on December 1, as compared with 47,040 in the preceding month. Declines were registered in all provinces except Ontario, where a considerable number of men were placed on unemployment relief work. The number released on December 1, 1931, was very much larger owing to the completion of certain unemployment relief projects, but employment was then in decidedly greater volume than on the date under review, owing to the unemployment relief works then being executed on a larger scale.

*Railway.*—Activity on railway construction and maintenance showed another seasonal decline which involved fewer workers than that noted on the same date in 1931; the index was then, however, higher than on December 1, 1932. Statistics were received from 35 contractors and divisional superintendents whose staffs were diminished from 25,401 men on November 1 to 22,484 on the date under review. The most pronounced contractions were in the Prairie Provinces, although there were general losses throughout the country.

### Services

Further seasonal reductions in this division were reported by the 312 co-operating firms, who had 20,205 employees, or 488 fewer than in the preceding month. Hotels and restaurants continued to decrease their labour forces. Employment was less active than on December 1, 1931, when rather smaller declines had been recorded.

### Trade

Large seasonal increases were again noted in retail trade, but wholesale houses released some employees. Returns were received from 885 trading establishments with 85,859 employees, or 1,616 more than on November 1. The index was lower than on the same date in the preceding year, when rather more extensive gains had been noted.

Index numbers of employment by economic areas, leading cities and industries are given in the accompanying tables. The columns headed "relative weight" show the proportion that the number of employees reported in the indicated area or industry, is of the total number of employees reported in Canada by the firms making returns on the date under review.

## (2) Unemployment in Trade Unions at the Close of November, 1932

Unemployment as used in the following report has reference to involuntary idleness due to economic causes. Persons who are engaged in work other than their own trades or who are idle due to illness are not considered as unemployed, while unions involved in industrial disputes are excluded from these tabulations. As the number of unions making returns varies from month to month with consequent variation in the membership upon which the percentage of unemployment is based, it should be understood that such figures have reference only to the organizations reporting.

There was little change in the local trade union situation at the close of November from the previous month, the tendency, however, being unfavourable. This was reflected by the returns received from a total of 1,797 labour

organizations, with 161,058 members, 36,783 of whom were without work on the last day of the month, a percentage of 22.8 contrasted with 22.0 per cent of inactivity in October. Unemployment remained on a higher level than in November, 1931, when 18.6 per cent of idleness was recorded. Nova Scotia and New Brunswick unions reported gains in activity of 3.6 and 3.1 per cent respectively from October, due in the former province to employment revival in the coal mines, the manufacturing industries, particularly the metal trades, accounting largely for the change in the latter. In Alberta employment showed an increase on a somewhat small scale, a better situation obtaining for coal miners and iron and steel workers, while the trend in Manitoba was also in a favourable direction,

though the change was less than 1 per cent. The Saskatchewan unions, on the other hand, indicated the most pronounced contractions from October, the manufacturing industries and steam railway operation especially showing losses, and in British Columbia the falling off in building activity was responsible largely for the retrogressive employment movement shown in that province. In Ontario also dullness in the building and construction trades and in the manufacturing industries accounted for the adverse situation. Unemployment in Quebec remained at a high level, though no change was apparent in the province as a whole from October, minor increases and de-

upward. Moderate curtailment in the volume of work afforded was apparent among Toronto and Vancouver unions, and the situation for Saint John and Regina unions declined slightly. Compared with the returns for November, 1931, Regina unions alone showed some employment expansion during the month reviewed. On the other hand, large losses in activity were indicated by Saint John unions, fair-sized reductions occurring among Toronto, Halifax, Edmonton, Montreal and Vancouver unions. In Winnipeg the contractions reported were on a smaller scale.

The chart accompanying this article illustrates the trend of unemployment by months

PERCENTAGE OF UNEMPLOYMENT AS REPORTED BY TRADES UNIONS

clines in activity offsetting each other. Nova Scotia unions alone reported a better employment volume than in November, 1931, the coal mines of the province showing substantial improvement. Losses in activity of noteworthy proportions were apparent in Quebec, Ontario and Alberta from November a year ago, the building trades particularly reporting severe employment recessions. Lesser declines, though appreciable, occurred among New Brunswick and British Columbia unions.

Each month the returns on unemployment from the largest city in each province, with the exception of Prince Edward Island, are tabulated separately. Of these Halifax reported a gain in activity of over 3 per cent from October, the employment tendency in Montreal, Winnipeg and Edmonton also being

from January, 1926, to date. The course followed by the curve during November changed but slightly from October, the tendency, however, being upward, and indicative of a small increase in idleness. Slackness continued more marked than in November, 1931, when the curve rested at a somewhat lower level than in the month surveyed.

The manufacturing industries with 475 unions reporting a membership of 43,347 persons in November, showed an unemployment percentage of 26.0 contrasted with 24.3 per cent of inactivity in October. The most substantial curtailment of activity from October was reported by wood, hat and cap, garment and fur workers, while among cigarmakers and metal polishers the percentage contractions were large, but involved few members. In the

iron and steel trades slight employment recessions only occurred, several provinces reporting improvement, which was just more than offset by declines in others. Brewery workers indicated the same situation as in October, and conditions for printing tradesmen were practically unchanged. On the other hand, noteworthy expansion was recorded by glass workers and general labourers, while leather workers, papermakers, and bakers and confectioners reported gains in activity of less than 1 per cent. In making a comparison with the returns for

November, 1931, in the manufacturing industries when 19.5 per cent of the members reported were without work, general labourers, leather, jewellery, glass, fur, and brewery workers, and bakers and confectioners all indicated a better employment volume during the month reviewed. On the contrary, a large falling off in activity was reflected in the iron and steel trades from November a year ago, and heavy employment curtailment was apparent among hat and cap workers, metal polishers, textile workers, and cigarmakers. Garment workers also reported noteworthy increases in slackness, and less favourable conditions prevailed for papermakers, printing tradesmen and woodworkers.

In the coal mining industry considerably more employment was afforded during November than in the previous month, the 46 unions making returns with 13,688 members showing 7.0 per cent of inactivity in contrast with 13.3 per cent in October. Nova Scotia, Alberta and British Columbia unions all participated in this favourable employment movement shown from October, the most extensive gains being recorded in Nova Scotia. A better employment trend was noted in coal mining, also from November, 1931, when 9.5 per cent of the members reported were idle. In this comparison the improvement was entirely confined to the coal fields of Nova Scotia, the Alberta and British Columbia mines showing heavy losses in activity.

The slight improvement in conditions manifest in the building and construction trades during October was not maintained in November, unemployment showing a moderate increase. This was indicated by the returns tabulated from 241 unions in the building trades with a membership aggregate of 20,812 persons, 13,218 or a percentage of 63.5 of whom were idle on the last day of the month contrasted with 59.6 per cent in October. Conditions for electrical workers were somewhat better than in October, and gains of less than 1 per cent occurred among plumbers and steamfitters. On the other hand, large percentage reductions were shown among granite and stonecutters, and tile layers, lathers and roofers, which, however, did not affect a great number of workers. Increasing curtailment of activity on a noteworthy scale was recorded by bricklayers, masons and plasterers, carpenters and joiners, and painters, decorators and paperhangers, while the situation for bridge and structural iron workers, steam shovel and dredgers and hod carriers and building labourers was also unfavourable. Building and construction operations were largely restricted from November, 1931, when the percentage of unemployment in the building group as a

TABLE I.—PERCENTAGES OF UNEMPLOYMENT IN TRADE UNIONS BY PROVINCES

| Month             | N.S. and Prince Edward Island | New Brunswick | Quebec | Ontario | Manitoba | Saskatchewan | Alberta | British Columbia | Canada |
|-------------------|-------------------------------|---------------|--------|---------|----------|--------------|---------|------------------|--------|
| Average 1919..... | 3.1                           | 2.0           | 3.4    | 2.7     | 2.1      | 3.2          | 2.0     | 7.9              | 3.4    |

whole stood at 51.9. Much slacker conditions prevailed for granite and stonecutters, hod carriers and building labourers, plumbers and steamfitters, tile layers, lathers and roofers, and carpenters and joiners than in November, 1931, and activity for bricklayers, masons and plasterers showed a substantial drop. Among painters, decorators and paperhangers, and bridge and structural iron workers also declines of lesser degree occurred. Electrical workers were the only tradesmen to report a better situation during the month reviewed, the improvement being moderate.

From unions in the transportation industries 794 reports were tabulated in November, covering a membership of 60,455 persons, 8,142 of whom, or a percentage of 13.5, were without employment, contrasted with percentages of 12.9 in October and 11.1 in November, 1931. The slight drop in activity noted from October was attributable to employment cessation in the steam railway division, returns of which comprised about 80 per cent of the entire group membership reporting. A better situation prevailed, however, for navigation workers, and fractional improvement was shown among street and electric railway employees. Teamsters and chauffeurs reported the same unemployment percentage during both months compared. As in the previous comparison unemployment among steam railway workers was a deciding factor in the unfavourable situation shown in the transportation industries from November a year ago, though contractions in activity of much lesser magnitude were reported by teamsters and chauffeurs. Conditions for navigation workers were much better than in November, 1931, and nominal gains only occurred for street and electric railway employees.

There was a falling off in activity among retail clerks during November from the previous month, the 6 unions from which returns were tabulated with a total of 1,169 members showing 5.8 per cent of idleness compared with 2.0 per cent in October. Unemployment among the Quebec locals was responsible for this adverse movement. Conditions were also slacker than in November, 1931, when only 0.5 per cent of the membership involved was idle.

Civic employees reported little change in the situation from October, the percentage of idleness standing at 5.6 in November, con-

trasted with 5.3 per cent in the preceding month. The November percentage was based on the returns furnished to the department by 73 associations with a membership aggregate of 7,749 persons. Less favourable employment conditions prevailed than in November, 1931, when 1.4 per cent of inactivity was registered.

Reports received at the close of November from 112 unions in the miscellaneous group of trades, embracing a membership of 3,848 persons, showed that 818 or 21.3 per cent were without employment contrasted with percentages of 20.8 in October and 19.2 in November, 1931. Compared with the October situation unclassified workers reported an increase in available employment of 3 per cent during the month reviewed, lesser gains being recorded by stationary engineers and firemen, and hotel and restaurant employees. Recessions with a slightly more than offsetting influence, however, were indicated by theatre and stage employees and barbers. Activity for hotel and restaurant, and theatre and stage employees, and stationary engineers and firemen was substantially curtailed from November, 1931. Among unclassified workers, on the other hand, the situation showed noteworthy improvement, with nominal gains only recorded by barbers.

The 2 unions of fishermen making returns in November with 705 members showed that 27.0 per cent were idle on the last day of the month, contrasted with 21.3 per cent of unemployment in October and 30.0 per cent in November, 1931.

Quieter conditions prevailed for lumber workers and loggers during November than in the previous month as shown by the reports tabulated, from 5 unions, including 1,362 members. Of these 633 or 46.5 per cent were unemployed on the last day of the month compared with 36.3 per cent in October. Greater slackness was in evidence than in November, 1931, when the percentage of unemployment stood at 30.1.

Table I shows by provinces the percentage of members who were on an average unemployed each year from 1919 to 1931 inclusive, and also the percentage of unemployment by provinces for November of each year from 1919 to 1929 inclusive, and for each month from January, 1930, to date. Table II summarizes the returns in the various groups of industries for the same months as in Table I.

### (3) Employment Office Reports for November, 1932

The volume of business transacted during the month of November, 1932, in offices operated by the Employment Service of Canada was 23 per cent more extensive than in October, but nearly 40 per cent below that of November a year ago, the gains in the former instance being largely due to increased placements in construction and maintenance and farming, with smaller gains recorded in all other groups, except services and mining, where losses occurred. In comparison with

ward trend during the second half of the month. At the close of the period, however, the level of each was considerably below that recorded at the end of November, 1931.

The ratio of vacancies to each 100 applications was 39.4 during the first half, and 48.8 during the second half of November, 1932, in contrast with ratios of 62.4 and 61.0 during the corresponding periods of 1931. The ratios of placements to each 100 applications during the periods under review were 37.2 and 47.0

POSITIONS OFFERED AND PLACEMENTS EFFECTED FOR EACH ONE HUNDRED APPLICATIONS FOR EMPLOYMENT

November, 1931, all divisions but farming, transportation and logging recorded declines, the heaviest loss taking place in construction and maintenance, and the highest gain in farming.

The accompanying chart shows the trend of employment since January, 1930, as represented by the ratio of vacancies notified and of placements effected for each 100 applications for work registered at the offices of the Service throughout Canada, compilations being made semi-monthly. It will be seen from the graph that the curves of vacancies and placements in relation to applications remained practically stationary during the first half of November, but showed a marked up-

as compared with 61.3 and 59.9 in the corresponding month in 1931.

The average number of vacancies reported daily by employers to the offices of the Service throughout Canada during November, 1932, was 1,148, as compared with 929 during the preceding month, and with 1,839 in November a year ago.

The average number of applications for employment received daily by the offices during the month under review was 2,607, in comparison with 2,276 in October, and with 2,979 during November, 1931.

The average number of placements made daily by the offices of the Service during November, 1932, was 1,096, of which 568 were

in regular employment and 528 in work of one week's duration or less, as compared with a total daily average of 889 during the preceding month. Placements in November a year ago averaged 1,806 daily, consisting of 728 placements in regular and 1,078 in casual employment.

During the month of November, 1932, the offices of the Service referred 28,854 persons to vacancies, and effected a total of 27,383 placements. Of these, the placements in regular employment were 14,182, of which 10,813 were of men and 3,369 of women, while placements in casual work totalled 13,201. The number of vacancies reported by employers was 22,262 for men and 6,421 for women, a total of 28,683, while applications for work numbered 65,165, of which 52,683 were from men and 12,482 from women.

The following table gives the placements effected by the offices of the Employment Service of Canada, each year, from January, 1922, to date:—

| Year                  | Placements |         |         |
|-----------------------|------------|---------|---------|
|                       | Regular    | Casual  | Totals  |
| 1922.....             | 297,827    | 95,695  | 393,522 |
| 1923.....             | 347,165    | 115,387 | 462,552 |
| 1924.....             | 247,425    | 118,707 | 366,132 |
| 1925.....             | 306,804    | 106,021 | 412,825 |
| 1926.....             | 300,226    | 109,829 | 410,155 |
| 1927.....             | 302,723    | 112,046 | 414,769 |
| 1928.....             | 334,604    | 135,724 | 470,328 |
| 1929.....             | 260,747    | 137,620 | 398,367 |
| 1930.....             | 187,872    | 180,807 | 368,679 |
| 1931.....             | 175,632    | 295,876 | 471,508 |
| 1932 (11 months)..... | 139,481    | 183,541 | 323,022 |

#### NOVA SCOTIA

There was an increase of over 147 per cent in the number of positions offered through Employment Offices in Nova Scotia during November, 1932, when compared with the preceding month, and of over 86 per cent in comparison with November, 1931. Placements also were 147 per cent higher than in October and nearly 91 per cent in excess of the corresponding month of the previous year. The substantial gain in placements over November, 1931, was due to work provided in relief of unemployment on highway construction, as construction and maintenance was the only group to show any increase under this comparison. Services, however, was the only division to show any appreciable loss. Placements under construction and maintenance numbered 1,886 and in services 305. Of the latter 215 were of household workers. During the month 309 men and 63 women were placed in regular employment.

#### NEW BRUNSWICK

Orders received and placements effected at Employment Offices in New Brunswick during November, 1932, were 13 per cent higher than in the preceding month and 8 per cent above November, 1931. The gain over the corresponding month of last year was due to increased placements under construction and maintenance, although the gain in this group was partly offset by fewer placements in the services' division. The changes in other groups were small, gains being reported in farming and transportation, while there were losses in manufacturing and trade. There were 791 placements under construction and maintenance and 398 in services. Of the latter, 290 were of household workers. Regular employment was secured for 10 men and 48 women.

#### QUEBEC

During the month of November, 1932, positions offered through Employment Offices in the Province of Quebec were nearly 21 per cent higher than in the preceding month and over 45 per cent above the corresponding month of 1931. There was a gain also in placements of nearly 24 per cent when compared with October and of over 27 per cent in comparison with November, 1931. All groups, except logging and mining, participated in the gains in placements over November, although services and construction and maintenance were the only groups to show important gains. The increases in these groups were largely offset by the substantial loss in bush placements. Placements by industrial divisions included: manufacturing, 97; logging, 86; construction and maintenance, 371; trade, 52; and services, 1,162, of which 1,000 were of household workers. During the month 707 men and 852 women were placed in regular employment.

#### ONTARIO

Opportunities for employment, as indicated by orders received at Employment Offices in Ontario during November, 1932, were nearly 15 per cent higher than in the preceding month but nearly 60 per cent less than during the corresponding month of 1931. There was a gain of over 15 per cent in placements, when compared with October, but a loss of over 60 per cent in comparison with November, 1931. The heavy decline in placements from November of the preceding year was due to fewer men being sent to relief work on highway construction, but manufacturing and services also showed substantial losses. The most important gains were in logging and transportation. In-

## REPORT OF THE EMPLOYMENT OFFICES FOR THE MONTH OF NOVEMBER, 1932

† 358 placements effected by offices since closed.

dustrial divisions in which most of the placements were effected during the month were: manufacturing, 399; logging, 698; farming, 350; transportation, 254; construction and maintenance, 5,171; trade, 388; and services, 2,902, of which 1,595 were of household workers. There were 3,210 men and 1,140 women placed in regular employment during the month.

#### MANITOBA

Employment Offices in Manitoba received orders for over 31 per cent more workers during November, 1932, than in the preceding month, but nearly 28 per cent less than during the corresponding month of 1931. Similar percentages of change were reported in placements under both comparisons. The reduction in placements from November, 1931, was mainly due to fewer men being sent to relief work on highway construction. This decrease, however, was partly offset by an increase in farm placements under the unemployment relief scheme. Of the other divisions, manufacturing showed a gain, while there were losses in services, logging and trade. Placements by industrial divisions included: manufacturing, 184; farming, 1,173; construction and maintenance, 918; and services, 734, of which 615 were of household workers. There were 1,781 men and 391 women placed in regular employment during the month.

#### SASKATCHEWAN

The number of positions offered through Employment Offices in Saskatchewan during November, 1932, was 100 per cent higher than in the preceding month and 44 per cent above the corresponding month of the previous year. There was an increase of nearly 94 per cent in placements, when compared with October, and of nearly 34 per cent in comparison with November, 1931. A large increase in farm placements under the unemployment relief scheme was responsible for the gain over November of the previous year, as all other groups, except services, showed declines. None of these, however, were large, except in construction and maintenance, where fewer placements on highway construction were responsible for the decrease. Placements by industrial divisions included: farming, 2,528; construction and maintenance, 515; trade, 57; and services, 681, of which 525 were of household workers. Placements in regular employment numbered 2,775 of men and 401 of women.

#### ALBERTA

There was a decrease of 37 per cent in the number of positions offered through Employment Offices in Alberta during November, 1932, when compared with the preceding

month and of nearly 55 per cent in comparison with the corresponding month of 1931. Similar percentages of change were reported in placements under both comparisons. During November, 1931, relief work on highway construction was provided for large numbers of men, but during the month under review few workers were placed in employment of this kind. This accounted for the large decrease under this comparison for the province as a whole. Declines in mining and manufacturing were offset by gains in farming and logging. Placements in industrial divisions included: manufacturing, 42; logging, 42; farming, 437; mining, 41; construction and maintenance, 650; trade, 47; and services, 450, of which 359 were of household workers. There were 867 men and 273 women placed in regular employment during the month.

#### BRITISH COLUMBIA

During the month of November, 1932, orders received at Employment Offices in British Columbia called for nearly 16 per cent more workers than during the preceding month and nearly 13 per cent more than in November, 1932. There was a gain of nearly 14 per cent in placements compared with October and of nearly 11 per cent in comparison with November of the previous year. Increased placements in logging and construction and maintenance accounted for the gain over November, 1931, although services also showed improvement. Of the declines in other groups, a number of which were unimportant, those in manufacturing, trade and farming were the largest. Industrial divisions in which most of the placements were effected during the month were: logging, 258; farming, 31; construction and maintenance, 2,373; and services, 582, of which 363 were of household workers. Placements in regular employment numbered 1,154 of men and 201 of women.

#### Movement of Labour

During the month of November, 1932, the offices of the Employment Service of Canada made 14,182 placements in regular employment, 7,681 of which were of persons for whom the employment found was outside the immediate vicinity of the offices at which they were registered. Of the latter, 169 were granted the Employment Service Reduced Transportation Rate, 156 going to points within the same province as the despatching office and 13 to other provinces. The reduced transportation rate, which is 2.7 cents per mile, with a minimum fare of \$4, is granted by the railway companies to *bona fide* applicants at the Employment Service who may desire

to travel to distant employment for which no workers are available locally.

The labour movement in Quebec during November comprised the transfer of 38 persons at the reduced rate, these being bush workers despatched by the Quebec City Office to employment within its own zone. Reduced rate certificates granted in Ontario during November were 42 in number and entirely provincial. Of these, 19 were issued at Port Arthur to 16 highway construction cookees and 3 loggers for employment within the Port Arthur zone, which zone was also the destination of one mine mechanic journeying from Sudbury. The Timmins zone received 17 bush workers from North Bay and 4 carpenters from Pembroke, while the one remaining transfer was of a farm hand sent from Hamilton to Belleville. In Manitoba 33 workers secured certificates for transportation during November, 20 of whom went to provincial employment and 13 to other provinces. The Winnipeg Office was instrumental in the despatch of one farm hand and one farm domestic to Brandon and of 11 farm hands, one farm housekeeper and 4 fishermen to centres within the Winnipeg zone. To a point within its own zone Dauphin transferred one bush worker, this zone receiving also one farm hand from St. Boniface. Of the workers going outside the province 10 were conveyed from Winnipeg to centres in the Port Arthur zone, including 5 bush workers, 3 hotel workers, one caulker and one highway construction cook. To the Port Arthur zone also was despatched one logger from St. Boniface. In addition, the Winni-

peg Office sent one farm hand each to the Yorkton and Regina zones. Saskatchewan Offices transferred 5 workers at the reduced rate during November to employment within the province. From Regina one labourer was conveyed to Swift Current and 2 farm hands within the Regina zone, while destined to the Prince Albert zone were one logger journeying from Moose Jaw and one farm housekeeper from Saskatoon. Business transacted by Alberta Offices during November involved the issue of 44 reduced rate certificates, all provincial. Of these 40 were granted at Edmonton to 2 miners bound for Calgary, one farm hand for Drumheller and to 15 farm hands, 3 farm domestics, 9 bushmen, 5 miners, 2 engineers, 2 labourers and one hotel waitress proceeding to employment at various centres within the Edmonton zone. In addition, from Calgary 2 farm hands and one farm housekeeper were transported to Edmonton and one farm hand within the Calgary zone. Workers taking advantage of the Employment Service reduced transportation rate in British Columbia during November were 7 in number, these destined to provincial employment. The movement was entirely from Vancouver and comprised the transfer of 2 bush workers to Kamloops, one miner to Penticton and 4 mine workers within the Vancouver zone.

Of the 169 persons who secured certificates at the reduced rate during November 116 journeyed over the Canadian National Railways, 44 over the Canadian Pacific Railway, 5 over the Northern Alberta Railway and 4 over the Pacific Great Eastern Railway.

#### (4) Building Permits issued in Canada during November, 1932

The aggregate value of the construction represented by the building permits issued by 61 cities during November was \$2,505,309. This was a seasonal decline of \$570,828 or 18.6 per cent as compared with the October total of \$3,076,137, and a reduction of \$4,776,808, or 65.6 per cent in comparison with the November, 1931, figure of \$7,282,117.

Some 50 out of the 61 cities furnished detailed statistics, showing that they had issued nearly 200 permits for dwellings estimated to cost more than \$630,000, and about 1,400 permits for other buildings estimated at almost \$1,800,000. In addition, authority was granted for engineering projects valued at \$15,122. During October, the erection of about 350 dwellings and 2,000 other buildings was authorized at an estimated cost of approximately \$1,400,000 and \$1,650,000, respectively.

Nova Scotia and Ontario reported increases of 6.2 per cent and 29.7 per cent, respectively,

in the value of the building authorized as compared with October. Reductions were indicated in the remaining provinces, that of \$679,836, or 52.7 per cent in Quebec being the largest.

As compared with November, 1931, New Brunswick reported an increase, while the greatest decline in this comparison was that of \$2,465,396, or 30.2 per cent in Quebec.

Of the four largest centres, Montreal, Winnipeg and Vancouver recorded decreases in the value of the building authorized in November as compared with the preceding month, and also with November of a year ago, while in Toronto, the aggregate value was higher than in the preceding month, but lower than in November of last year. Of the other centres, Moncton, Shawinigan Falls, Kitchener, Oshawa, Port Arthur, St. Thomas and Medicine Hat reported greater values of building authorizations than in either comparison.

*Cumulative Record for First Eleven Months, 1920-1932.*—The following table shows the value of the building authorized by 61 cities during November and in the first eleven

| Year      | Value of permits issued in November | Value of permits issued in first eleven months | Indexes of value of permits issued in first eleven months (1926=100) | Average Indexes of wholesale prices of building materials in first eleven months (Average 1926=100) |
|-----------|-------------------------------------|--|--|---|
| 1932..... | \$ 2,505,309                        | \$ 37,922,575                                  | 26.2   | 77.7  |
| 1931..... | 7,282,117                           | 104,327,739                                    | 72.0   | 82.7  |
| 1930..... | 11,821,292                          | 150,939,044                                    | 104.2  | 91.4  |
| 1929..... | 16,171,400                          | 220,255,867                                    | 152.0  | 99.5  |

| 1927..... | 12,857,622                          | 172,858,176                                    | 119.3  | 96.7  |
| 1926..... | 9,975,451                           | 144,877,789                                    | 100.0  | 100.2   |
| 1925..... | 7,988,765                           | 117,665,590                                    | 81.2   | 103.8   |
| 1924..... | 10,212,908                          | 120,119,829                                    | 82.9   | 107.2   |
| 1923..... | 8,228,030                           | 126,547,365                                    | 87.3   | 111.7   |
| 1922..... | 11,182,030                          | 138,698,005                                    | 95.7   | 108.6   |
| 1921..... | 12,192,414                          | 111,257,084                                    | 76.8   | 123.9   |
| 1920..... | 5,627,949                           | 112,175,268                                    | 77.4   | 153.4   |

months of each year since 1920, as well as index numbers for the latter, based upon the total for 1926 as 100. The January-November index numbers of wholesale prices of building materials in these years are also given (average 1926=100).

The aggregate for the first eleven months of 1932 was lower than in 1931 and other years since 1920, but in this connection it should be noted that the average index numbers of wholesale prices of building materials were also much lower than in any other of these twelve years; from the high point of 153.4 in 1920, this index had declined to 77.7 in the same eleven months of 1932, or by 49.3 p.c.

The accompanying table gives the value of the building permits issued by 61 cities in October and November, 1932, and November, 1931. The 35 cities for which records are available since 1910 are marked by asterisks.

#### ESTIMATED COST OF BUILDING WORK AS INDICATED BY BUILDING PERMITS ISSUED BY 61 CITIES

| Cities                    | November, 1932 | October, 1932 | November, 1931 | Cities                      | November, 1932   | October, 1932    | November, 1931   |

Significant shifts in the number and proportion of gainful workers in the various occupational divisions in the United States are shown in the report on occupation statistics for 1930 recently issued by the Bureau of the Cen-

sus. Although the total number of gainful workers 10 years of age and over in the United States in 1930 was 27.9 per cent higher than in 1910, the gainful workers in agriculture decreased 15.5 per cent during this period.

## ANNUAL REVIEW OF EMPLOYMENT IN CANADA, 1932

*Report prepared by the Dominion Bureau of Statistics*

EMPLOYMENT during 1932 was generally dull, continuing the unfavourable movement which since its beginning in 1929, has seriously affected the situation in Canada as well as in practically all the other industrial countries of the world.<sup>1</sup> During part of this period, much work was afforded by the Dominion, Provincial and local governments in an effort to combat the prevailing depression, and this was reflected (although not wholly) in the monthly record of employment maintained in the Dominion Bureau of Statistics. During the year just passed, however, it was decided generally to substitute a policy of direct relief for the unemployed, partly because the field for public works that could be practically and economically carried out was fairly well exhausted. The index of employment, deprived to a considerable extent of the stimulus of large scale public works, declined to a point decidedly lower than in any recent year. The extent to which the changed policy has affected the index number is indicated by the fact that the number of man-days worked on state-aided projects was 11,135,334 in 1931, while in the eleven months to November 30, 1932, it was only 7,669,164.

The employers reporting to the Dominion Bureau of Statistics, averaging over 7,900, showed almost continually declining employment from month to month in 1932. The exceptions were the comparatively small increases recorded on June 1 and October 1 over the immediately preceding months.

Owing to the highly seasonal fluctuations characteristic of industry in the Dominion, an index of seasonal variation has been calculated according to the Harvard method; the monthly indexes have been adjusted by means

of this index. The elimination of the seasonal variations illustrates clearly the generally unsatisfactory situation in 1932 as compared with preceding years of the record (see chart on page 62).

The average number of firms<sup>1</sup> furnishing monthly data on employment was 7,900 during the past year, and they had a monthly average of 801,356 employees. Their staffs ranged from 765,441 on December 1 to 835,960 on January 1, when activity was at its highest point for the year. The index then stood at 91.6; the 1931 peak was 107.1 on September 1, while the maximum so far reached in this record was 127.8 at the beginning of August, 1929, when the pay-rolls of the co-operating firms aggregated nearly 1,100,000. The mean index for 1932 was 87.5, compared with 102.5 in 1931, 113.4 in 1930, 119.0 in 1929, 111.6 in 1928, 104.6 in 1927, 99.62 in 1926, 93.6 in 1925, 93.4 in 1924, 95.8 in 1923, 89.0 in 1922 and 88.9 in 1921. In connection with these indexes it might be mentioned that the present depression has been characterized by a very general movement to retain as far as possible the usual working force by reducing the daily or weekly hours worked. The earnings of the persons included in the monthly reports on employment, if available, would in this way probably show in many cases a greater decline than the number on the pay-rolls upon which the index numbers are calculated. In the United States, where statistics of earnings as well as of numbers employed are collected from the co-operating firms, the index of earnings in manufacturing averaged 42.0 per cent of the 1926 mean during the first eleven months of 1932, as compared with 60.3, the average index of employment computed on the same basis. In many cases, of course, there have also been reductions in the scale of pay, as well as in the time worked.

Another point may be noted regarding the index numbers of employment. Where em-

<sup>1</sup>Employment statistics that are generally comparable do not exist for the various industrial countries. The following shows the available data for certain countries:—

Great Britain: The latest press reports show that 2,799,806 persons insured under the Unemployment Insurance Acts were unemployed on November 21, 1932; this was approximately 22.2 p.c. of the insured workers.

Germany: Trade unions with 3,432,520 members, reported 43.6 p.c. of their membership as wholly unemployed in September, 1932. The provisional figure showing the number registered as unemployed under the compulsory unemployment insurance acts was provisionally given as 5,109,439 in October, 1932.

United States: The index of employment in the manufacturing industries in November, 1932, was 59.4, calculated on the 1926 average as 100.

<sup>2</sup>The number of wage-earners reported in the Census taken in June, 1931, was 2,564,879, of whom 2,093,211 were at work on the date of the Census. The firms reporting for June 1, 1931, showed an aggregate pay-roll of 940,875 persons, or 44.95 per cent of the census total, which included the professional workers, (notably teachers and public administration employees), agricultural employees, domestic service and other important industries not included in the monthly survey of employment.

<sup>3</sup>As the average for the calendar year, 1926, including figures up to Dec. 31, 1926, is the base used in computing these indexes, the average for the 12 months, Jan. 1-Dec. 1, 1926, generally shows a slight variation from 100.

ployers are obliged to curtail their production it often happens that the date to which the monthly survey in the Dominion relates marks the low point in activity for the month, employment frequently being in greater volume on almost any other working day of the month. This factor is of general importance only when the numbers at work fluctuate on a low level, as in recent months.

There were few outstanding features in the 1932 employment situation. All industries and areas were affected to a greater or less degree by the world-wide dullness in business. Employment was maintained at a higher level in the service and trade divisions than in any other group; this comparative activity is to some extent associated with the tourist trade, which, however, proved somewhat disappointing during 1932 as compared with recent years. It is also probable that in these lines of business, in which establishments cannot wholly close down for longer or shorter periods, the situation is met by cutting down the normal working day or week for the individual employee in order to retain as many as possible on the pay-roll. This tends to keep up the employment index, since the methods used in rotating the staff are usually not reflected in the monthly employment data.

Up to December 1, employment in manufacturing fluctuated between narrower limits than in recent years, there being a spread of rather less than eight points during the twelve months as compared with nearly twelve in 1931 and larger differences in earlier years. Logging was very dull throughout the year, employment in bush work generally being at a lower level than in any other period on record. In mining, transportation and communications the index numbers were consistently low; in the first two indeed their averages were lower than in any preceding year for which data are available, while the communications average was slightly higher than the first four years of the record. Construction was also dull; although the index averaged higher than in 1921, 1922, 1923 and 1924, it was lower than in the intervening years.

### Employment by Economic Areas

The five economic areas reported curtailment in employment during the year just passed. The index, based upon the 1926 average as 100, was maintained at a higher level in the Maritime and Prairie Provinces than elsewhere, but even in those areas, the falling-off from 1931 and earlier years of the record was considerable. Firms in Ontario, on the other hand, reported a smaller proportional reduction as compared with the preceding

year than was the case in any other of the economic areas.

*Maritime Provinces.*—Employment in the Maritime Provinces diminished steadily during the first four months of 1932, during which period the index declined by some twenty-four points to 87.8 on May 1. Considerable recovery was indicated on June 1, succeeded by four months of decreasing employment, which brought the index to a new low level at 84.9 on October 1. The trend was again upward at the beginning of November, but the downward movement was shortly resumed, and on December 1, the index stood at 83.8 p.c. of the 1926 average. Employment month by month was consistently lower in 1932 than in the same month in 1931 or immediately preceding years. Manufacturing as a whole afforded a smaller volume of employment in 1932 than in 1931. In the textile group, activity was generally greater than in the preceding year, although the index in a few months sagged below its level in the same month of 1931. Pulp and paper, lumber, iron and steel and other factories reported reduced activity as compared with 1931. In the pulp and paper and iron and steel groups, the index numbers were higher at the end of the year than they had been at the beginning. Unsatisfactory export conditions during 1932 continued to affect transportation, which afforded less employment than in 1931, which in turn was quieter than the immediately preceding years. Communications were also slacker. Construction generally was not so brisk; while some unemployment relief works were undertaken, they were not so extensive as in 1931, and the index averaged 129.9 in 1932, as compared with 183.2 in the year before. Services showed reduced activity, and trade also registered a generally lower level of employment than in the preceding year. Employment in mining, on the whole, was duller than in 1931, when the falling-off from the 1930 level was not so pronounced, and activity had varied to a smaller extent. Considerable seasonal activity was indicated in logging at the beginning of 1932, but this was shortly curtailed and the index averaged some 21 points lower than in 1931. The aggregate payrolls of the 583 reporting employers in the Maritime Provinces averaged 63,567 persons, as compared with the mean of 73,817 employed by the 571 firms co-operating in the preceding year.

*Quebec.*—In Quebec, there were five months of generally expanding employment, as compared with four such advances in 1931. These gains were, however, on a smaller scale than those recorded in the preceding year, and were offset by declines that with one exception also

involved a greater number of workers, so that the reported staffs averaged considerably less than in 1931; employment on the whole fluctuated between narrower limits during 1932 than in the last few years. The index for each month in 1932 was below that for the corresponding month in the preceding year. From the 1932 peak of 87.8 on June 1, the index declined to 82.9 at the beginning of December; this was over three points lower than on Jan. 1. The labour forces of the 1,895 co-operating employers varied between 223,987 and 236,284 workers on the dates of minimum and maximum activity, respectively, averaging 230,356 for the twelve months. The mean index was 85.5, as compared with 100.9 in the preceding year. Manufacturing as a whole was slacker than in 1931. Lumber, pulp and paper and iron and steel recorded a much smaller volume of employment; as in the preceding year, the losses in iron and steel were accentuated by the closing of large railway car shops for some weeks in the autumn. With the resumption of work in these plants towards the close of the year, however, the situation improved to some extent, although the index continued at a low level. In textiles, the index was lower during the first six months of 1932 than in the first half of 1931, but from then on until the end of the year, activity was greater; the index, at 98.6, however, averaged 1.1 points less than in the preceding year. Employment in mining, communications, transportation, construction and maintenance, services and trade was in smaller volume throughout the year. In the logging group, activity was greater at the beginning of July and August, but less in all other months. Unemployment relief works, which were an important factor in the 1931 situation, did not afford so large a volume of employment during 1932, and the index in construction was decidedly lower than in the immediately preceding years. Employment in services and trade was fairly well maintained, but at a lower level than in 1931 and earlier years of the record; it is very probable that many persons on the payrolls of the reporting trading and services establishments, as in manufacturing and various other groups, were not employed full time.

*Ontario.*—An average staff of 331,725 employees was registered by the 3,538 firms furnishing data in Ontario; the mean index was 88.7 in 1932, or 12.5 points lower than in the preceding year. Manufacturers reported decidedly less activity than in 1931. During the greater part of the year, the index was lower than the general manufacturing index for the Dominion as a whole, and it also averaged less than in the second great manufacturing prov-

ince—Quebec; this was largely due to curtailment in the iron and steel industries which are especially important in the industrial composition of Ontario. Employment in food, pulp and paper, building material, lumber and other factories shared in the general prevailing quietness. In the textile group, activity, with the exception of two months in the autumn, was lower month by month than in the same period of 1931, but the index in 1932 averaged only fractionally less than in 1931. Operations in logging camps were greatly curtailed, as a result of unfavourable markets abroad as well as at home. The index reached a very low level during the autumn, standing at only 9.3 per cent of the 1926 average on October 1; the seasonal expansion recorded in the following months brought this only to 28.7 on December 1, or some 24 points lower than on the same date in 1931, a previous low level. It is as yet too early for the benefits of the Imperial Conference treaties to be felt in this group. Mining, though slacker than in the preceding year, maintained a better volume of employment throughout 1932 than was reported in most industries, the index averaging 121.5, as compared with 134.1 in 1931. The production of metallic ores continued high in the year just passed; this group accounts for most of the persons engaged in mining in Ontario. In communications and transportation, the numbers employed were smaller than in the preceding year; services also reported less activity than in 1931, but employment in this group was relatively higher than in any other. The index in construction, owing to unemployment relief projects, was higher in the first two months of 1932 than in the preceding year, but with the curtailment in these undertakings, was decidedly lower from March 1; the index averaged 101.1 in the twelve months of 1932, compared with 128.5 in 1931. The volume of employment in trade, though smaller than in the preceding year, was greater than in the first seven years of the record. The relatively high level of employment in services and trade may to a certain extent be associated with the activity of the tourist season, although this proved disappointing in many respects.

*Prairie Provinces.*—Employment in the Prairie Provinces showed less fluctuation than in the preceding year, the index ranging only from 86.1 on April 1 to 94.6 at the beginning of October, and averaging 90.0 in the twelve months, or 21.5 points less than in 1931. The index in this area showed a greater falling-off from the preceding year than occurred in any other; nevertheless, the situation in the Prairie Provinces, largely owing to improved crop conditions, is generally held to be more hopeful than in 1931, and it is anticipated that on the

whole less relief will be required during the winter months, particularly for agriculturists. As has been pointed out in previous annual reviews of employment, the unsatisfactory conditions prevailing in agriculture since the autumn of 1929 have resulted in much unemployment among farm workers, who are ordinarily not represented in these statistics, but for many of whom work or relief had to be found in recent years. The 1,150 employers furnishing data in Manitoba, Saskatchewan and Alberta had an average staff of 110,211 persons during the year, while in 1931, the 1,100 co-operating firms reported an average payroll of 134,938 workers. Activity in manufacturing, mining, communications, transportation, services and trade was less, on the whole, during 1932 than in 1931. Within the manufacturing group, there were losses in the lumber, pulp and paper, iron and steel and other industries; the iron and steel group, however, showed improvement towards the close of the year, and textiles generally afforded more employment. Construction work was at a lower level during the whole of 1932, largely due to curtailment of unemployment relief works. Logging continued at a low level, although it was slightly more active during eight months of the year than in the same period of 1931.

*British Columbia.*—The 777 firms reporting in British Columbia employed an average working force of 65,428 employees, while in the preceding year the mean was 77,238; the index averaged 80·5, as compared with 95·5 in 1931, 107·9 in 1930, 111·5 in 1929, and 106·4 in 1928. All groups of manufacturing showed lowered activity, the lumber trade being especially affected by the trade depression at home and abroad. Logging, mining, communications, transportation, construction, services and trade were slacker during the greater part of 1932 than in 1931. The falling-off in construction was particularly marked, partly owing to the curtailment of the public unemployment relief projects in conformity with the general policy instituted in 1932 by which direct relief was substituted for relief works.

### Employment by Cities

Employers in the eight cities for which separate tabulations are made—Montreal, Quebec, Toronto, Ottawa, Hamilton, Windsor and the adjoining Border Cities, Winnipeg and Vancouver—recorded on the whole a lower level of activity than in 1931. The reports showed that employment was brisker in Ottawa and Quebec City than in the other centres above named, while the lowest indexes were reported in Hamilton and Windsor and the adjoining Border Cities.

*Montreal.*—The staffs of the 1,072 Montreal firms making returns averaged 129,094 persons, while the mean index, at 88·1, was over 14 points lower than that for the preceding year. Manufacturing was not so active during 1932, the index averaging 85·6, as compared with 98·8 in 1931. The vegetable food group showed a higher level during the autumn of last year than in the year preceding, but employment on the whole was slacker. The printing, publishing and paper goods, textile, iron and steel and other groups reported curtailment as compared with 1931; tobacco and beverage factories, however, were decidedly busier. Communications and trade consistently afforded less employment, and with the exception of only one month, transportation was also quieter than in the same month of 1931. Construction likewise reported curtailment as compared with the preceding year.

*Quebec City.*—Employment in Quebec fluctuated between narrow limits, there being less than 10 points difference between the maximum and minimum index numbers of employment, as compared with a 1931 range of over 18 points. Last year's average, at 101·8, compared unfavourably with that of 122·2 in the preceding year. There was, however, a decline of only about five points in the index from the beginning of the year to December 1. The staffs of the 143 employers furnishing data averaged 12,404, as compared with 13,158 in 1931. Activity in manufacturing as a whole was decidedly less, the mean index standing at 102·6, as against 116·8 in the preceding year. Leather plants reported a fair volume of employment, but these and other factories were not so busy as in 1931. The indexes in transportation and construction were considerably lower throughout the year.

*Toronto.*—Employment on April 1 and October 1, 1932, showed improvement, but the tendency was downward in all other months, and at the close of the year the index was over eight points lower than at the beginning; the mean of 95·2 compared unfavourably with that of 107·7 for 1931. The number of employees of the 1,182 firms co-operating during the year under review averaged 112,778, while in the year before the mean payroll of the 1,100 reporting employers was 120,105. Within the manufacturing group, iron and steel reported a further marked falling-off, and losses were also indicated in food, textile, printing and publishing and other industries. Transportation, communications and construction were not so active as in 1931. In trade, employment was generally quite well maintained by the firms furnishing returns, although at a lower level than in the preceding year;

in Toronto, as in the other centres, some establishments continued to retain their ordinary staffs by reducing the hours worked by their employees.

*Ottawa.*—Manufacturing on the whole reported a smaller volume of employment than in the preceding year, all branches showing generally reduced activity. Construction and trading establishments, on the whole, reported smaller staffs. A mean payroll of 12,531 workers was employed by the 160 firms whose data were received, as compared with the 1931 average of 13,970. The index averaged 99.3, as compared with an average index of 119.5 in the preceding year.

*Hamilton.*—Employment in Hamilton was dull during the whole of 1932; the improvement which was indicated at the beginning of only three months in the twelve, was on a very small scale, and the index was between fourteen and fifteen points lower at the end of the year than at the beginning. This decline was on a larger scale than that reported in 1931 as compared with 1930. All industries showed curtailment, the greatest losses occurring in the iron and steel industries, which, with textiles, are the greatest employers of labour in Hamilton. Construction was not so active as in the preceding year, there being a smaller volume of relief work afforded in addition to the curtailment in private undertakings. Trading establishments also indicated reduced employment. The 236 co-operating firms reported an average working force of 26,374 persons; the index averaged 83.7, compared with 101.3 in 1931, 113.9 in 1930, 128.4 in 1929, and 108.2 in 1928.

*Windsor and the adjacent Border Cities.*—The index number of employment in the Border Cities averaged 78.4 and the recorded payrolls averaged 10,023 workers in 1932, compared with 88.3 and 10,931, respectively, in the preceding year; in 1929, when employment was at its maximum for this record, the mean index was 153.2, but in 1927, this was 86.2. Largely owing to the depression in the automobile and related industries, employment in the Border Cities continued very quiet during 1932. Construction also showed less activity than in 1931. Owing to the employment policy followed by some firms in the Border Cities, it frequently happens that employment on the date of this enquiry is at a lower level than on almost any other day in the month. This tends to make the average index number show a rather more unfavourable situation than is quite typical of conditions for the month.

*Winnipeg.*—Employment conditions continued unfavourable in Winnipeg throughout the year just closed, being still affected by the unsatisfactory crop marketing situation that has been an important factor since the autumn of 1929. With only two exceptions, the tendency from month to month during 1932 was steadily downward, so that the index on Dec. 1, standing at 82.2, was over ten points lower than on Jan. 1. The mean index for the year was 86.6, compared with 97.1 in 1931, 107.6 in 1930 and 112.3 in 1929. The manufacturing division as a whole was slacker, in spite of improvement in the animal and vegetable food and textile industries. Transportation, construction and trade afforded a smaller volume of employment. An average staff of 35,277 was recorded by the 383 firms whose data were received during the twelve months under review. This absolute number is greater than the 1931 figure, owing to the inclusion of certain branches of the railways hitherto included only in the totals for the Prairie Provinces and the Dominion; the base upon which the indexes are calculated was increased correspondingly, and the index, as shown above, was lower than in recent years.

*Vancouver.*—The falling-off in employment in Vancouver during 1932, as compared with the preceding year, was greater than in 1931 as compared with 1930, although there was a decline of only 5.3 points between the January 1 and the December 1 index, the latter standing at 85.8. It is likely, however, that the unemployment existing in Vancouver is greater than would be indicated by these figures owing to the unemployed transients who gravitate there, although in all probability they have never appeared on any of the payrolls reported by Vancouver establishments. Calculated from data furnished by some 335 firms with a mean payroll of 27,312 persons, the index averaged 88.5, as compared with 104.5 in the preceding year. Manufacturing showed contractions as compared with 1931, the lumber and other leading groups reporting lowered activity. The indexes for communications, transportation, services and trade also averaged lower than in 1931; construction, deprived of the stimulus of large scale works for the relief of unemployment as carried on in the preceding year, reported a low level of employment.

### Manufacturing Industries

Employment in manufacturing was quieter during 1932 than in other years of the record. Statistics were received from some 4,870 manufacturers employing, on the average, 417,989 operatives, as compared with the

average of 467,711 reported by the 4,670 establishments making returns in 1931. The index averaged 84·4 per cent of the 1926 payrolls of the co-operating firms, as compared with a mean of 95·3 in the preceding year, and 109·0 in 1930. The decline in the index between 1931 and 1932, therefore, averaged 10·9 points, while that in 1931 as compared with the preceding year had amounted to 13·7 points. This may possibly be an indication that the force of the retrogressive movement is expending itself. With few exceptions, all branches of manufacturing recorded smaller payrolls than in 1931; only the tobacco, leather, hosiery and knitting, woollen and silk groups showed improvement in this comparison. Activity in all other groups was curtailed; the declines in the animal food, lumber, pulp and paper, rubber, textile, iron and steel, non-ferrous metal and mineral product industries were on a smaller scale than those reported in 1931, as compared with 1930. The loss in the textile division as a whole was indeed only fractional. On the other hand, vegetable food, chemical, clay, glass and stone, electric current and electrical apparatus plants showed greater decreases in that comparison. The level of employment in silk, beverage and tobacco, electric current and electrical apparatus, woollen, hosiery and knitting and printing and publishing plants was relatively higher as compared with preceding years than was the case in other industries. The reopening during November of large railway car shops closed a few weeks previously, resulted in a considerable increase in employment being shown in iron and steel towards the end of 1932, but nevertheless, this important group reported greatly curtailed operations throughout the year.

*Animal Products, Edible.*—During 1932 employment in this group showed seasonal advances during four months, during which nearly 4,300 persons were added to the payrolls of the 228 reporting firms; in the preceding year, the period of expansion had extended over five months, but the number then taken on for this seasonal work was smaller by approximately 1,000 workers. Nevertheless, the mean index for 1932, at 101·5, was slightly over one point lower than in 1931. Fish-preserving and meat-packing plants recorded smaller staffs, but during most of the year employment in dairies was rather more active. The payrolls of the 228 reporting employers averaged 18,206 persons, varying between 16,226 on March 1 and 20,515 at the beginning of July. Owing to an increase in the co-operating firms, the aggregate staffs were larger than those reported by the 211

manufacturers reporting in 1931, but as already stated, the index for 1932 was lower.

*Leather and Products.*—Leather factories, on the whole, afforded very slightly more employment than in 1931, the index being higher during the last eight months of the year. An average working force of 17,903 employees was recorded by the 245 co-operating establishments, and the mean index was 88·4, as compared with 88·0 in 1931 and 87·8 in 1930. Footwear factories in particular showed improvement; records of footwear production maintained by the Animal Products statistics Branch of the Bureau show that a monthly average of 1,536,469 pairs of shoes was turned out in the first eleven months of 1932, compared with a monthly mean of 1,504,008 pairs in the same period of the preceding year.

*Lumber Products.*—The seasonal fluctuations indicated in the lumber trades during 1932 were not so pronounced as usual; although the period of expansion, extending over six months, lasted a month longer than in 1931, employment was generally slackier than in 1931. Steady gains between February 1 and July 1, were succeeded by consistent losses during the latter part of the year. The payrolls of the firms furnishing data ranged between 33,768 persons at the beginning of July, and 26,137 on December 1, averaging 30,428 in the 12 months, as compared with the 1931 mean of 38,770. The average index, standing at 58·5, was many points lower than the mean of 74·1 for the preceding year. Rough and dressed lumber mills, owing to continued curtailment of foreign demand, as well as to unfavourable domestic markets, recorded a smaller volume of employment than in 1931, and losses in that comparison were also noted in furniture and other lumber-using plants.

*Musical Instruments.*—Activity in musical instrument factories declined considerably during 1932, according to statements from some 36 firms whose staffs averaged 1,260. The mean index stood at 43·9 in 1932, compared with 57·4 in the preceding year. The production of wireless apparatus is not included in this industrial group, which, as in previous years, has undoubtedly been seriously affected by the popularity of radios.

*Plant Products, Edible.*—Employment in vegetable food factories, on the whole, was quieter in 1932 than in the preceding year; canneries, biscuit and confectionery and some other divisions of the group reported smaller payrolls than in 1931, while improvement in that comparison was noted in sugar and syrup

factories during most of the year. An average working force of 28,700 persons was registered by the 390 reporting establishments, in which the number of operatives ranged between 25,937 on January 1, and 34,506 at the beginning of October. The mean general index of 94·6 in 1932 compared unfavourably with the 1931 average of 105·4, and also with that of 113·0 in 1930.

*Pulp and Paper.*—The pulp and paper industries continued to show the effect of the general weakness in the foreign and domestic market, employment throughout 1932 being at a lower level than in any other year since 1925. The fluctuations in the group as a whole, however, were not especially marked, being rather less so than in 1931; the index, standing at 86·1 on December 1, was only 3·8 points lower than at the beginning of the year. The reported staffs average 52,914 employees, and the index 87·9, as compared with a mean index of 96·5 in 1931. The decline was less than that which occurred in 1931 as compared with 1930. Employment in 1932 was lower than in the preceding year in all three divisions of the group—pulp and paper, paper goods and printing and publishing, but the paper goods division showed a smaller decline than the other two.

*Rubber Products.*—Activity in rubber factories decreased during six months of 1932 and increased in the remaining months, showing a steadily upward movement during the last quarter of the year; the gains in personnel resulted in a higher level of employment at the end of the year than had been recorded at the beginning, the index standing at 86·1 on December 1, or nearly four points higher than on January 1. This was one of the very few groups in which this favourable movement occurred. Nevertheless, the mean index stood at 85·2, compared with 98·7 in 1931. The rubber groups continued to be seriously affected by the general depression, as well as by the special dullness in the motor industry; the production of tires ordinarily employs about 55 per cent of the workers in the rubber group. The pay-rolls of the 43 plants supplying information during 1931 averaged 10,828, ranging between 10,263 workers on September 1, and 11,602 at the beginning of October.

*Textile Products.*—Employment in the textile industries in 1932 showed fluctuations similar to those of 1931, but the period of improvement in the autumn lasted one month longer. Following the curtailment indicated at the beginning of the year, there was a period of considerable expansion during the next three months, during which the increases

were unusually large. Four months of seasonal inactivity then reduced employment by about nine points. This was succeeded by advances at the beginning of September, October and November, but the trend was again unfavourable in December. At the end of the year, the index at 96·3, was six points higher than on January 1, and was also higher than on the same date in the preceding year; the twelve-month mean, however, was 97·0, as compared with 97·6 in 1931. An average staff of 81,617 employees was reported by the co-operating manufacturers, who averaged 823. The thread, yarn and cloth branch of this group reported greater activity than in 1931, chiefly owing to improvement in the woollen and silk trades, and hosiery and knitting mills were also busier; the garment and other divisions of the textile industry, however, recorded reductions in personnel.

*Tobacco, Distilled and Malt Liquors.*—Statements were compiled from over 150 firms, whose working forces averaged 14,944 persons. The mean index of 115·9 in 1932 showed little change from the 1931 mean of 116·1; (the 1930 figure stood at 124·9, which was practically the same as in 1929), but both the 1931 and 1932 averages were above the 1928 mean of 109·3. Tobacco factories were more active during the year under review than in 1931, but employment in the production of distilled and malt liquors was quieter.

*Chemical and Allied Products.*—The level of employment in this group was decidedly lower than that reported in the preceding year; the index averaged 96·7, as compared with 115·5 in 1931. An average pay-roll of 8,090 workers was registered by the 141 employers whose statistics were tabulated.

*Clay, Glass and Stone Products.*—Employment in these industries was greatly curtailed as compared with earlier years of the record, reflecting the general dullness in building. The index number averaged 72·5, while in 1931 it was 101·7; 182 factories reported an average working force of 7,796 persons, ranging from 9,016 on June 1 to 5,890 at the beginning of December.

*Electric Current.*—The average number engaged in the production of electric current was less than in the preceding year. The index averaged 115·4, as compared with 126·1 in 1931, while the aggregate staffs of the co-operating producers averaged 14,192 during 1932, as compared with 15,378 in the preceding year.

*Electrical Apparatus.*—Employment in this division, which includes a considerable proportion of the firms producing radios and equipment, was in smaller volume during

1932 than in 1931 and preceding years since 1927, but with these exceptions, was more active than in other years for which data are available. The reported pay-rolls included, on the average, 12,425 workers, and the mean index was 112.6, as compared with 15,030 and 135.7, respectively, in 1931.

*Iron and Steel Products.*—As in 1931, the trend of employment in this group was generally downward throughout the year, except for an unusually brief period of seasonal activity between February 1 and April 1, while the reopening of large railway car shops closed for some weeks resulted in a betterment towards the close of the year. The automobile industries continued very dull, and substantial contractions as compared with previous years were also indicated in the crude, rolled and forged, machinery, agricultural implement, railway car, shipbuilding, heating appliance, structural iron and steel, foundry and machine shop and other divisions of the group. The aggregate working force of the 762 manufacturers of iron and steel products who reported during 1932 averaged 87,809 persons; in 1931 the mean was 111,395 and at the 1929 maximum it was 161,126. The average index, at 67.3, compared unfavourably with that of 85.9 in 1931. The average labour force per establishment in the year under review was 115, or 37 less than in the preceding year; in 1931 the average had declined by 49.

*Non-Ferrous Metal Products.*—Employment in this division was also considerably curtailed during the year under review, the index averaging less than in 1931 and preceding years since 1925. The mean index was 84.9 and the reported employees 13,130, compared with 111.4 and 17,180, respectively, in 1931.

*Non-metallic Mineral Products.*—In spite of gains in many months of the year, employment in non-metallic mineral product plants averaged lower than in 1931, the index standing at 119.4, as compared with 124.9 in 1931, 142.6 in 1930, 138.2 in 1929 and 120.5 in 1928. It was, however, higher than in any preceding year since the record was instituted in 1920. Statements were received each month from over 100 firms whose staffs averaged 11,724 persons. The gas, petroleum and other divisions of this classification, though not so active as in the preceding year, nevertheless maintained a fair volume of employment; activity in this industry was higher than in any other manufacturing division except silk mills.

*Other Manufacturing Industries.*—Fur factories on the whole reported a lower level of employment than in 1931, the index averaging 81.4, as against 91.3 in the preceding year.

The production of wood distillates and extracts and of miscellaneous manufactured products showed a decrease.

### Logging

Logging camps, on the whole, reported decidedly less activity than in any other year on record; the index was consistently low throughout 1932, owing to a weak demand for lumber in both home and export markets. While it is as yet too early for the benefits from the Imperial Economic Conference agreements to be apparent, it is expected that these will shortly result in improved conditions in both logging and lumber industries. The working force of the 223 firms supplying information averaged 11,646, and the index number, 42.5 in 1932; in 1931, the previous low level, the mean index was 60.1 while the number employed by the employers co-operating during 1931 was 16,262. Many logging workers, deprived of their customary occupation, drifted to the cities, where they helped to swell the already large labour reserves. It has already been pointed out that the difficulties of collecting data covering bush operations are constantly increased by the growing practice on the part of the larger operators, of letting contracts for their wood requirements to small contractors and to settlers on the northern frontiers of settlement. During the year just passed, as in 1931, employment in logging was maintained in better volume in the Maritime Provinces and Quebec than elsewhere.

### Mining

There were losses in mining during the first eight months of 1932, succeeded by three months of increasing activity, after which the trend again turned downward. The level of employment was lower than in the preceding year, although the falling-off in this comparison was not so pronounced in mining as in some other groups. The index averaged 99.2, compared with 107.7 in 1931; this was a falling-off of 8.5 points, as compared with the reduction of over 10 points in 1931 as compared with 1930. In *coal-mining*, conditions were not so good as in 1931, employment being generally less active. The mean index was 91.0, compared with 96.6 in 1931, so that the decline in this branch was less than the general loss in the mining group. The labour force of the co-operating operators averaged 24,337 workers in 1932, as against 25,613 in the preceding year. Employment in mining *metallic ores*, though generally lower than in 1931, was continued in fair volume, the index varying only between 131.1 on May 1, and 135.1 on April 1. The mean index, at 133.1, was between five and six

points below the average of the preceding year. The staffs of the reporting firms averaged 15,687 during the year under review, compared with 16,217 in 1931. *Non-metallic minerals* (other than coal) registered very decidedly reduced employment, in sympathy with the dullness prevailing in the building trades; the index averaged 71.8, as against 97.7 in the preceding year. A mean payroll of 4,756 persons was employed by the co-operating firms, while those reporting in 1931 had an average of 6,457. Quarries, asbestos mines and other divisions coming under this heading recorded lowered activity; this was as a result of unfavourable markets abroad, as well as at home.

### Transportation

There were important seasonal losses in the first three months of 1932, involving a rather larger number of persons than in the first quarter of the preceding year. Following this period, the tendency, except in one month, was favourable until the beginning of November, when seasonal losses were again recorded. Employment was in less volume throughout 1932, when the index averaged 84.7, as compared with 95.8 in 1931. The 357 transportation companies whose returns were tabulated employed, on an average, 99,478 workers, as compared with the mean of 111,024 reported by the 345 employers co-operating in the preceding year. In the *steam railway division*, the index averaged 77.4, or nearly 14 points lower than in 1931. An average working force of 61,554 employees was recorded in steam railway operation, compared with 71,550 in 1931. *Street railways and cartage* companies, with an average payroll of 23,600 persons, reported a rather lower level of employment than in the preceding year, the index averaging 114.4, as compared with 119.7 in 1931 and with 123.6 in both 1930 and 1929, but with 111.7 in 1928. Employment in *shipping and stevedoring* was lower than in 1931; the mean index was 82.3, while the reported staffs averaged 14,325, varying between 11,751 persons on April 1, and 16,388 at the beginning of December. In the preceding year, the mean index was 89.4 and in 1930 it was 99.8.

### Communications

Telegraphs and telephones reported a much smaller volume of employment during 1932 than in 1931, in sympathy with the general depression in business. The index averaged 93.5, compared with 104.7 in 1931. The personnel of the companies furnishing data averaged 24,341 employees, of whom some 80 per cent were engaged on telephones. The per-

centage reductions indicated in the telegraph and telephone divisions during 1932 were quite similar.

### Construction and Maintenance

The period of expansion indicated in the construction industries last summer consisted of only three months, during which the increases were on a comparatively small scale. Activity in the construction industries, in spite of certain governmental unemployment relief measures, was poorly maintained, being less than in any other year since 1925. The forces of the 1,038 co-operating employers averaged 98,103 during the twelve months, varying between 118,911 on January 1 (when extensive relief works were under way), and 77,719 at the beginning of December. The general index for this group averaged 86.0, compared with 131.4 in 1931, the previous maximum. The substitution of direct relief for unemployment relief works as a general policy throughout the Dominion during 1932, resulted in a decided reduction in activity in construction as compared with 1931, when works of this nature were carried on very extensively.

*Building construction* gained in only two months in 1932, improvement being indicated on June 1 and July 1, and was not nearly so active as in preceding years. The mean index was 54.1 in 1932, compared with 104.3 in 1931. The average number of persons employed by the reporting contractors was 21,389. As already stated in connection with logging, there is an increasing tendency for the larger contractors to sublet their contracts, by trades, to sub-contractors, who usually employ a comparatively small number of workers. When they have less than 15 employees, they are not asked to furnish data on employment, so that the number employed in building is undoubtedly considerably in excess of that covered in these statistics.

*Road construction* reported a much lower level of employment than in 1931, when unemployment relief measures had been undertaken on a greater scale. The number employed was smaller than in any other year since 1928. The payrolls reported averaged 50,237 workers, and ranged between 68,539 on January 1 and 40,271 at the beginning of December. The average index of 143.9 compares unfavourably with that of 216.4 indicated in 1931, when employment in this division, as a result of unemployment relief measures, reached its maximum for this record. In many districts, road work is supplementary to the occupations ordinarily

followed by nearby residents, particularly agriculturists during slack periods on their farms; especially in the Western Provinces, and in the first part of the year, a considerable portion of the work authorized under the provisions of the Unemployment and Farm Relief legislation enacted in 1931, was allocated in the distressed agricultural districts.

Employment in *railway construction* (in which the working forces covered averaged 26,477 men) was much quieter than in the last few years. The index averaged 66·8, while the mean in 1931 was 85·8.

### Services

Statements were received monthly from some 290 firms in this division, whose employees averaged 21,464; with two exceptions, gains were noted from March 1 to September 1, succeeded by seasonal declines in the last quarter of the year. Employment in hotels and restaurants was maintained at a level above the general average during 1932, although activity was considerably less than in 1931. In the miscellaneous group of services, composed largely of laundering and cleaning establishments, employment was also in rather smaller volume than in the preceding year, although it is better than in other branches of this division. The general index in services was 113·6, as against 124·7 in 1931.

### Trade

Trade was quieter during 1932 than in 1931 and preceding years since 1928. Partly as a reflection of the rather unsatisfactory tourist season employment was at a comparatively low level during the summer, there being declines in four months, as compared with two in 1931. Steady improvement was indicated in the last three months of the year, but this was not sufficient to counteract the previous losses. The payrolls of the 854 co-operating firms averaged 83,488 persons, and the index 116·1, compared with 123·6 in 1931. It has already been mentioned as highly probable that many establishments, in order to keep their usual staffs, have reduced the working hours per week or per month, so that the earnings of the persons employed would, if available, show a greater falling-off than the personnel. Of the workers in the trade group, over 73 per cent were classified as employed in retail stores. In recent years, there has been a growing tendency for the larger stores and chain organizations to absorb the small businesses which would otherwise not be represented in these statistics, and this change in organization may have helped to keep the index of employment in recent years at a relatively high level in comparison with other groups.

## EMPLOYMENT AND UNEMPLOYMENT IN GREAT BRITAIN AND THE UNITED STATES

### Great Britain

THE British *Ministry of Labour Gazette*, December, 1932, summarized the employment situation as follows:

The seasonal decline continued in the building industry, public works contracting, the distributive trades, and the transport, hotel, boarding house, etc., services. There was also some decline in the clothing, lace, jute, and electrical apparatus industries.

On the other hand, employment improved in the cotton industry, in textile bleaching, dyeing, and finishing, in most of the metal industries, and in the motor vehicle and glass industries.

There was an increase in unemployment in all divisions of the country. Employment was again moderate in London and Southeast England, slack in the Southwest and Midlands, and bad in all other areas.

Among the workpeople, numbering approximately 12,808,000, insured against unemployment in Great Britain and Northern Ireland, and working in practically every industry

except agriculture and private domestic service, the percentage unemployed at November 21, 1932 (including those temporarily stopped as well as those wholly unemployed) was 22·2, as compared with 21·9 at October 24, 1932, and with 21·4 at November 23, 1931. The percentage wholly unemployed at November 21, 1932, was 18·2, as compared with 17·9 at October 24, 1932, while the percentage temporarily stopped remained unchanged at 4·0. For males alone, the percentage at November 21, 1932, was 25·7, and for females, 15·0; at October 24, 1932, the corresponding percentages were 25·5 and 12·5.

At November 21, 1932, the number of persons on the Registers of Employment Exchanges in Great Britain was 2,189,258 wholly unemployed, 512,998 temporarily stopped, and 97,550 normally in casual employment, making a total of 2,799,806. This was 52,800 more than a month before, and 184,691 more than a year before. The total included 2,275,780 men, 72,096 boys, 401,178 women, and 50,752 girls. Comparison

of the numbers on the registers with the figures for a year before is affected by the results of legislative and administrative changes.

The persons on the registers included 1,281,794 insured persons with claims for insurance benefit (consisting of those who (a) had paid at least 30 contributions during the preceding two years; (b) had received less than 156 days' benefit in their current benefit years; and (c) if 156 days' benefit had become payable in a previous benefit year ending on or after November 12, 1931, had paid at least 10 contributions since the 156th day of benefit); 1,131,978 insured persons with applications for transitional payments; 247,843 insured persons not in receipt of insurance benefit or transitional payments and 138,191 uninsured persons.

In Northern Ireland the total number of persons on the Registers of Employment Exchanges at November 28, 1932, was 71,986.

### United States

The Bureau of Labor Statistics of the United States Department of Labour reports the changes in employment and payrolls in November, 1932, as compared with October, 1932, based on payroll reports ending nearest the 15th of the month, received from 67,884 identical establishments in 17 major industrial groups, having in November 4,487,587 employees, whose combined earnings in one week were \$86,981,315. The combined totals of these 17 industrial groups show a decrease of 1.0 per cent in employment and a decrease of 3.1 per cent in payrolls over the month interval. This more pronounced decrease in payrolls than in employment from October to November is due to some extent to election day and the observance of Armistice day in certain localities during the November pay period.

Two of the 17 industrial groups reported increases in both employment and payrolls; the metalliferous mining group reporting increases of 4.7 per cent in number of workers and 4.3 per cent in payroll totals, and the bituminous mining group reporting gains of 3.5 per cent and 0.7 per cent in employment and payrolls, respectively. The retail trade group reported a gain in employment of 0.5 per cent coupled with a decrease of 0.3 per cent in earnings, and the electric railroad operation group reported a decrease of 0.7 per cent in number of workers coupled with

an increase of 0.3 per cent in payrolls. In the remaining 13 groups decreases in both employment and payrolls were reported. In 5 instances, the decrease in employment were less than 1 per cent. Wholesale trade reported a drop of 0.3 per cent in employment and 0.9 per cent in payrolls, crude petroleum producing reporting 0.6 per cent fewer employees with decreased payrolls of 0.2 per cent, and the bank-brokerage-insurance-real estate group reported a decline of 0.6 per cent in number of workers and a decrease of 0.7 per cent in payrolls. The group of manufacturing industries reported decreases of 0.8 per cent in employment and 3.3 per cent in payrolls, and the telephone and telegraph group reported decreases of 0.9 per cent in number of employees and 1.9 per cent in payrolls. The power and light group reported decreases in employment and payrolls of 1.1 and 1.6 per cent, respectively, and the hotel group reported a decline of 1.5 per cent in number of workers and a decline of 1.9 per cent in payrolls. Laundries reported 1.7 per cent fewer employees combined with a payroll decrease of 3.3 per cent, and the anthracite mining group reported a decrease of 1.9 per cent in employment and a falling-off in earnings of 23.6 per cent over the month interval. The dyeing and cleaning group reported losses of 5.2 per cent and 11.1 per cent in employment and earnings, respectively, and the quarrying and non-metallic mining group reported a decrease of 5.8 per cent in number of employees and 10 per cent in payrolls. The building construction group reported 7.8 per cent fewer employees in November as compared with October combined with a payroll decrease of 9.7 per cent, and the canning and preserving industry reported a seasonal decline from October to November of 37.7 per cent in employment and 33.7 per cent in payrolls.

According to the monthly statement on the unemployment situation issued by Mr. William Green, president of the American Federation of Labour, which appeared in the Federation's *Weekly News Service* of December 17, approximately 11,000,000 workers were unemployed during November, 1932. "Trade union unemployment reports for November," Mr. Green continued, "show a reversal from the employment gains of the last few months. Records covering 650,000 union members show unemployment on the increase again. Our weighted figures, showing the per cent of union members out of work each month, are as follows: July, 25.4; August, 25.1; September, 24.8; October, 23.9; November, 24.1."

## FAIR WAGES CONDITIONS IN DOMINION GOVERNMENT CONTRACTS

THE Department of Labour is furnished from month to month with information regarding the contracts executed by various departments of the Government of Canada which include among their provisions fair wages conditions for the protection of the labour to be employed.

Reference was made in the LABOUR GAZETTE, June, 1930, page 652, to the Fair Wages and Eight-Hour Day Act of Parliament which was adopted on May 30, 1930. The text of this measure appeared in the April, 1930, issue, page 383. This Act provides as follows:—

3. (1) Every contract made hereafter with the Government of Canada for construction, remodelling, repair or demolition of any work shall be subject to the following conditions respecting wages and hours:—

(a) All persons in the employ of the contractor, sub-contractor, or of any other persons doing or contracting to do the whole or any part of the work contemplated by the contract shall be paid such wages as are generally accepted as current from time to time for competent workmen in the district in which the work is being performed for the character or class of work in which they are respectively engaged; provided that wages shall in all cases be such as are fair and reasonable;

(b) The working hours of persons while so employed shall not exceed eight hours per day except in such special cases as the Governor in Council may otherwise provide, or except in cases of emergency, as may be approved by the Minister.

(2) The provisions of this section shall not apply to persons employed in the fabrication or manufacture of materials, supplies or equipment for use in the work contemplated where such fabrication or manufacture is carried on in any established plant or factory other than a plant or factory established for the purposes of the work contemplated.

The Act was put into effect at once as respects contracts for construction, remodelling, repair or demolition, both as to its provisions of wages and as to the application of the eight-hour day.

With respect to contracts for other classes of work, the Fair Wages Policy of the Government of Canada (which has been in effect since 1900 and was expressed in an Order in Council adopted June 7, 1922, and amended April 9, 1924) requires that they must contain either a fair wage schedule based on the current wages, rates and working hours in the district, or a general fair wage clause requiring adherence to the current wage rates and working hours in the district for the different classes of labour employed or, in the absence of such standard conditions, fair and reasonable rates and hours. The conditions above mentioned are referred to in the Order in

Council as "A" conditions. Following is the text of the General Fair Wage Clause referred to:—

1. All mechanics, labourers, or other persons who perform labour in the construction of the work hereby contracted for, shall be paid such wages as are generally accepted as current from time to time during the continuance of the contract for competent workmen in the district in which the work is being performed for the character or class of work in which they are respectively engaged, and if there be no current rates in such district, then fair and reasonable rates, and shall work such hours as are customary in the trade in the district where the work is carried on or if there be no custom of the trade as respects hours in the district then fair and reasonable hours, unless for the protection of life and property or for other cause shown to the satisfaction of the Minister of Labour, longer hours of service are required. The Minister of Labour may at any time and from time to time determine for the purposes of this contract, what are the current or fair and reasonable rates of wages and the current or fair and reasonable hours, and may from time to time rescind, revoke, amend, or vary any such decision, provided that his determination and any amendment or variation shall not be operative prior to the period of three months immediately preceding the date thereof.

Where there are special circumstances which in the judgment of the Minister of Labour make it expedient that he should do so, he may in the manner and subject to the provisions hereinabove set forth, decide what are the current or fair and reasonable rates of wages for overtime, and what is the proper classification of any work for the purposes of wages and hours. Immediately upon receipt of notice of any decision of the Minister of Labour hereunder the contractor shall adjust the wages and hours and classification of work so as to give effect to such decision. In case the Contractor shall fail so to do, or to pay to any employee or employees for any service performed or for any hours of labour, wages according to the rates fixed therefor by the Minister of Labour, the Minister of Labour may authorize and direct the Minister to pay any such wages at the rates so fixed and to deduct the amount thereof from any moneys owing by the Government to the Contractor and any such payment shall for all purposes as between the Contractor and the Government be deemed and taken to be payment to the Contractor, and the Contractor shall be bound in every particular by any such authority, direction and payment as aforesaid.

The powers of the Minister of Labour hereunder shall not be exercised as to any employee or employees where it is established to his satisfaction that an agreement in writing exists and is in effect between the Contractor and the class of employees to which such employee or employees belong or the authorized representatives of such class of employees fixing rates of wages, overtime conditions and hours of labour.

It is further provided in the Order in Council that "all contracts for the manufacture and supply to the Government of Canada of fittings for public buildings, harness,

saddlery, clothing and other outfit for the military and naval forces, Royal Canadian Mounted Police, letter carriers, and other Government officers and employees, mail bags, letter boxes, and other postal stores, and any other articles and things hereafter designated by the Governor in Council" must contain provisions for the observance of the current wages, rates and working hours in the district, or, in the absence of any such current standards, fair and reasonable rates and working hours. These conditions are referred to in the Order in Council as "B" conditions, and include the following Fair Wages Clause:—

All workmen, labourers, or other persons who perform labour in the construction of the work hereby contracted for, shall be paid such wages as are generally accepted as current from time to time during the continuance of the contract for competent workmen in the district in which the work is being performed, and if there be no current rate in such district, then a fair and reasonable rate, and shall work such hours as those fixed by the custom of the trade as respects hours in the district where the work is carried on, or if there be no custom of the trade as respects hours in the district then fair and reasonable hours, except for the protection of life and property, or on due cause shown to the satisfaction of the Minister of Labour. In the event of a dispute arising as to what is the current or fair and reasonable rate of wages or what are the current hours fixed by the custom of the trade or fair and reasonable hours it shall be determined by the Minister of Labour, whose decision shall be final; payment may also be withheld of any moneys which would otherwise be payable to the Contractor until the Minister of Labour's decision has been complied with.

By the term "current wages" and the term "hours of labour fixed by the custom of the trade" in the foregoing are meant respectively the standard rates of wages and hours of labour either recognized by signed agreements between employers and workmen in the district from which the labour required is necessarily drawn or actually prevailing, although not necessarily recognized by signed agreements.

In both the "A" and "B" conditions of the Fair Wages Order in Council the Minister of Labour is empowered to determine questions which may arise as to what are the current or fair and reasonable wages, rates and working hours. The contractor is required to post and keep posted in a conspicuous place on the premises where the contract is being executed, occupied or frequented by the workmen, the fair wages clause or schedule inserted in his contract for the protection of the workmen employed. The contractor is also required to keep proper books and records showing the names, trades and address of all workmen in his employ and the wages paid to and time worked by such workmen, these records to be open for inspection by fair wages officers of the Government any

time it may be expedient to the Minister to have the same inspected.

It is declared that the contractor shall not be entitled to payment of any money which would otherwise be payable under the terms of contract until he has filed a statement showing: (1) the wages rates and hours of labour which are in force for the various classes of workmen; (2) whether any wages or payments remain in arrears; and (3) that all of the labour conditions of the contract have been complied with. In the event of default being made in the payment of the wages of any workman employed claim therefore may be filed with the Minister of the Department with which the contract has been made and payment of such claim may be made by the latter. (Under the "A" conditions these rights extend to moneys payable for the use or hire of horses or teams.)

All workmen employed in the execution of the contract shall be residents of Canada, unless the Minister of the department with which the contract has been made is of opinion that Canadian labour is not available, or that other special circumstances exist which render it contrary to the public interest to enforce this provision.

Under the "A" conditions clerks of works or other inspecting officers appointed by the Government to ensure the due observance of the contract are specially instructed to do all in their power to see that the labour conditions are fully complied with and to report any apparent violation to the department with which the contract is made.

The "B" conditions provide that the contractor's premises and the work being performed under contract shall be open for inspection at any reasonable time by any officer authorized by the Minister of Labour for this purpose, and that the premises shall be kept in sanitary condition.

During the past month statements were received in the Department of Labour showing that the following contracts were recently executed by the Government of Canada, and that they included either fair wages schedules as shown below, or the General Fair Wages Clause above mentioned:—

#### DEPARTMENT OF RAILWAYS AND CANALS

##### *Contract in Group "A" (Construction, etc.)*

Construction and erection of the steel superstructure of a highway swing bridge over the Rideau Canal at Merrickville, Ontario, including the wooden floor and the concrete counterweight. Name of contractors, Standard Steel Construction Co., Ltd., of Port Robinson, Ontario. Date of contract, December 10, 1932.

Amount of contract, \$5,690. A fair wages schedule was inserted in the contract as follows:—

| Trade or class of labour      | Rates of wages<br>not less than | Hours of labour<br>not more than |
|-------------------------------|---------------------------------|----------------------------------|
|                               | per hour                        | per day                          |
| Structural steel workers..... | \$0 80                          | 8                                |
| Carpenters.....               | 0 60                            | 8                                |
| Concrete mixer operator.....  | 0 45                            | 8                                |
| Labourers.....                | 0 35                            | 8                                |
| Motor truck driver.....       | 0 40                            | 8                                |
| Driver, team and wagon.....   | 0 70                            | 8                                |

#### POST OFFICE DEPARTMENT

Following is a statement of payments made in December, 1932, for supplies ordered by the Post Office Department under contracts which were subject to the regulations for the suppression of the sweating system, the securing of payment to the workers of fair wages and the performance of the work under proper sanitary conditions:—

| Nature of Orders  | Amount    |
|---|-----------|
| <i>Making Metal Dating Stamps and Type, Brass Crown Seals, Cancellers, etc.</i> |           |
| Pritchard-Andrews Co. of Ottawa, Ltd. . . . .                                   | \$ 687 91 |

| Nature of Orders  | Amount    |
|---|-----------|
| <i>Making and Repairing Rubber Stamps, Dater, etc.</i>  |           |
| Capital Rubber Stamp Works, Ottawa, Ont. . . . .        | 34 44     |
| Pritchard-Andrews Co. of Ottawa, Ltd. . . . .           | 260 36    |
| <i>Making &amp; Supplying Letter Carriers' Uniforms</i> |           |
| Miner Rubber Co. Ltd., Granby, P. Q. . . . .            | 180 62    |
| S. Dorfman, Quebec, P.Q. . . . .                        | 10,075 59 |

### RECENT INDUSTRIAL AGREEMENTS AND SCHEDULES OF WAGES

A SUMMARY is given below of the more important industrial agreements and schedules of wages and working conditions that have recently been received in the Department. Such agreements are summarized each month in the LABOUR GAZETTE. In the majority of cases the agreements are signed by both the employers and the employees. Verbal agreements, which are also included in the records, are schedules of rates of wages and hours of labour and other conditions of employment agreed upon between the parties concerned, and in effect though not signed. In addition to these, important schedules of wages are summarized, including civic schedules. In each agreement or schedule, the rates of wages for the principal classes of labour are given, with other information of general interest.

#### Manufacturing: Fur and Leather Products

TORONTO, ONTARIO.—CERTAIN EMPLOYERS AND THE INTERNATIONAL FUR WORKERS' UNION JOINT BOARD OF TORONTO (LOCALS NOS. 35, 40 AND 60).

The agreement which came into effect after the conclusion of the strike noted in the

LABOUR GAZETTE, October, page 1055, to be in effect from September 2, 1932, to June 20, 1934, and thereafter from year to year until notice.

Only union members to be employed, and no discrimination to be shown on account of union activity. The business agent of the union to be able to visit shops.

Hours: 44 per week.

Overtime: time and one-half, and except in case of emergency, overtime to be worked only during the months of August to November inclusive. Employees to be paid for the legal holidays.

Wages per week: cutters—first class \$40, second class \$30; operators (male)—first class \$30, second class \$25; operators (female) second class \$20; finishers (male)—first class \$30, second class \$25; finishers (female)—first class \$25, second class \$20; assistants and tapers \$18; blockers or nailers \$23 (\$28 after five years).

Wages for apprentices: after one year (improver) \$18 per week; after two years to be paid the minimum union scale.

No contracting or home work allowed. No individual agreements to be made with any employees which would obstruct this agreement, and no form of security to be required from any employee.

The principle of equal division of work to be observed as far as possible.

Disputes to be taken up by the union representative and the firm, or, if they cannot be

settled in this way, to be referred to a joint arbitration board whose decision will be binding. No strike or lockout to occur pending such arbitration.

**TORONTO, ONTARIO.—CERTAIN EMPLOYERS AND THE INTERNATIONAL FUR WORKERS' UNION, LOCAL No. 100.**

This local covers collar and cuff workers.

The agreement, which came into effect after the conclusion of the strike noted in the *LABOUR GAZETTE*, October, 1932, page 1055, is to be in effect from August 12, 1932, to April 15, 1934, and thereafter from year to year until notice.

This agreement is similar to the one with Locals 35, 40 and 60, summarized above, with the following exception:

Overtime to be permitted until 8 p.m. and after that only with the consent of the union. Payment for overtime work to be at time and one-quarter rate.

The wage rates are the same except that the class "operators (female) first class, \$25" is added.

### Manufacturing: Printing and Publishing

**WINNIPEG, MANITOBA.—A CERTAIN EMPLOYER AND THE INTERNATIONAL PHOTO ENGRAVERS' UNION, LOCAL No. 37.**

Agreement to be in effect from October 1, 1932, to September 30, 1933, and thereafter from year to year until notice.

Only union members to be employed, if available. Foremen must also be union members. The employer agrees to use the union label.

Hours: 44 per week.

Overtime: time and one-half for first four hours; double time thereafter. Work on Sundays and holidays, double time.

Wages for journeymen photo engravers: \$50 per week (the previous rate was \$55).

Apprentices to serve five years. One apprentice allowed to every five journeymen in the shop.

Wages for apprentices: from \$10 per week in first year to \$36 per week in fifth year.

All disputes are to be referred to an arbitration committee; if they fail to agree, they will choose a disinterested party whose decision will be binding. No strike or lockout to occur pending such decision.

**EDMONTON, ALBERTA.—CERTAIN JOB PRINTING FIRMS AND THE INTERNATIONAL PRINTING PRESSMEN AND ASSISTANTS' UNION, LOCAL No. 255.**

The agreement which came into effect November 1, 1929, and which was summarized in the *LABOUR GAZETTE*, February, 1931, page 238, was amended March 4, 1932, to continue in effect to May 15, 1933, providing for a wage reduction of approximately 10 per cent which makes the wage rates 96 cents per hour or \$42.24 per week for day work and \$1.06 per hour or \$44.52 per week for night work. The hours are unchanged at 44 per week for day work and 42 per week for night work.

### Construction: Buildings and Structures

**VICTORIA, B.C.—CERTAIN SHEET METAL CONTRACTORS AND THE INTERNATIONAL ASSOCIATION OF SHEET METAL WORKERS, LOCAL No. 134.**

Agreement to be in effect from November 15, 1932, to December 31, 1933, and thereafter from year to year until notice.

Only union members to be employed, if available, and union members not to work for any contractors who do not comply with the terms of this agreement.

Hours: 8 per day, 5 days per week; a 40-hour week.

Wages per hour for journeymen sheet metal workers: 87½ cents.

Overtime: time and one-half for first four hours; thereafter and all work on Sundays and holidays, double time.

One apprentice allowed to every three journeymen and they are to be governed according to the union constitution.

For work out of the city, extra fare, part of travelling time and board if necessary, to be paid by contractors.

### Service: Hotel and Restaurant

**VANCOUVER, B.C.—CERTAIN RESTAURANTS AND THE INTERNATIONAL ALLIANCE OF HOTEL AND RESTAURANT EMPLOYEES, LOCAL No. 28.**

Agreement to be in effect from July 1, 1932, to July 1, 1933, and thereafter from year to year until notice.

Only union members to be employed.

Hours: 8 per day, with a 6-day week.

Overtime: time and one-half for male cooks; 45 cents per hour for women cooks and waitresses and 50 cents per hour for waiters.

Wages per week: Male cooks—chefs \$36, second cooks, night cooks and bakers \$30, fry cooks \$24, pantrymen \$18, cleaners \$15. Women cooks—chefs \$36, second cooks and bakers \$18, fry cooks \$15, pantrywomen \$13.50, cleaners \$12. Waitresses: from \$13 to \$15.50; six hour shifts \$12.75, five hour shifts \$11.50, four hour shifts \$9.50; shifts of two to three hours 42½ cents per hour. Waiters: from \$15 to \$20.50 per week; five hour shifts \$12.75; shifts of two to three hours 60 cents per hour.

**VANCOUVER, B.C.—CERTAIN HOTELS AND BEER PARLOURS AND THE INTERNATIONAL ALLIANCE OF HOTEL AND RESTAURANT EMPLOYEES, LOCAL No. 676.**

Agreement to be in effect from July 5, 1932, to May 1, 1933, and thereafter from year to year until notice.

Hours: 8 per day, 6 days per week.

Wages per week: tap men \$30, combination men \$28.50, floor men \$27. For short shifts \$2.25 for 4 hours and 75 cents per hour for all time over 4 hours; for Saturdays and holidays \$5 per 8 hours; \$2.50 for 4 hours and 75 cents per hour over 4 and under 8 hours.

Proprietors to pay for cleaning and laundering of all uniforms.

## PRICES, RETAIL AND WHOLESALE, IN CANADA, DECEMBER, 1932

### Cost of Living, Prices of Staple Articles and Index Numbers

THE movement in prices during the month was downward, both the weekly family budget in terms of retail prices and the Dominion Bureau of Statistics index number of wholesale prices being slightly lower.

In retail prices the cost per week of a list of twenty-nine staple foods in terms of the average retail prices in sixty-nine cities was slightly lower at the beginning of December at \$7.04 as compared with \$7.09 for November. Comparative figures for earlier dates are \$7.85 for December, 1931; \$10.10 for December, 1930; \$11.83 for December, 1929; \$10.39 for December, 1922; \$14.84 for December, 1920; \$16.92 for June, 1920 (the peak); and \$7.96 for December, 1914. The decline was due mainly to lower prices for meats, although the prices of butter, bread, flour, rolled oats and evaporated apples were also lower. A substantial seasonal advance occurred in the price of eggs, while potatoes were slightly higher. Including the cost of fuel and rent with that of foods the total budget averaged \$16.01 at the beginning of December as compared with \$16.10 for November; \$17.76 for December, 1931; \$20.46 for December, 1930; \$22.11 for December, 1929; \$20.97 for December, 1922; \$25.67 for December, 1920; \$26.92 for July, 1920 (the peak); and \$14.26 for December, 1914. Fuel was practically unchanged. Rent declined in several localities.

In wholesale prices the index number calculated by the Dominion Bureau of Statistics, based upon prices in 1926 as 100, was again lower at 64.0 for December as compared with 64.8 for November; 70.4 for December, 1931; 77.7 for December, 1930; 96.0 for December, 1929; 98.0 for December, 1922; 164.3 for May, 1920 (the peak); and 66.4 for December, 1914. One hundred and eleven prices quotations were lower, forty-nine were higher and three hundred and forty-two were unchanged.

In the classification according to chief component materials five of the eight main groups declined, two advanced and one was unchanged. The groups which declined were: the Vegetables and Vegetable Products group, due to decreases in the prices of barley, oats, wheat, corn, flour, bran and shorts which more than offset higher prices for flax and canned vegetables; the Animals and their Products group, because of lower prices for fish, hides, leather, steers, hogs, cured meats and eggs which more than offset advances in the prices of calves, lambs, fresh meats, milk and butter; the Wood, Wood Products and Paper

group, mainly because of reduced quotations for lumber, lath and shingles; the Non-Ferrous Metals and their Products group, due to lower prices for copper, copper wire bars, silver and tin which more than offset slightly higher prices for lead and zinc; and the Chemicals and Allied Products group, due to declines in the prices of shellac and potassium iodide. The Iron and its Products group and the Non-Metallic Minerals and their Products group advanced, the former mainly because of higher prices for steel tank plates and hot rolled and annealed steel sheets, and the latter due to advances in the prices of imported bituminous coal and sulphur. The Fibres, Textiles and Textile Products group was unchanged.

In the grouping according to purpose both consumers' goods and producers' goods were lower, the former because of lower prices for flour, bran, shorts, coffee and cured meats which more than offset advances in the prices of potatoes, fresh meats, butter, and milk, and the latter due to decreased quotations for barley, wheat, oats, steers, hogs, hides, leather, lumber and silver which more than offset higher prices for flax, calves, lambs, hot rolled and annealed steel sheets and sulphur.

In the grouping according to origin lower quotations for wheat, rye, corn, coffee, raw cotton, steers, hogs, copper and tin caused a decline in raw and partly manufactured goods. In this group higher quotations were recorded for flax, potatoes, calves, lambs, milk, lead and zinc. Fully and chiefly manufactured goods were also lower, declines in the prices of flour, bran, shorts, cured meats, leather, copper wire bars and crushed stone more than offsetting advances in canned vegetables, butter, and hot rolled and annealed steel sheets. Canadian farm products, articles of marine origin and articles of forest origin declined. Articles of mineral origin were slightly higher.

### EXPLANATORY NOTE AS TO RETAIL PRICES

The table of retail prices and rentals shows the prices at the beginning of December of seventy-one staple foodstuffs, groceries, coal, wood and coal oil and the rent of six-roomed houses in sixty-nine cities throughout Canada. All prices are for delivered goods. The exact quality for which the quotation is given is set forth in the case of each commodity, and every effort has been made to ensure that the quotations in each case refer to the same class of commodity in order that the statistics may be available for purposes of comparison from month to month, from city to city, etc. The prices of foods and groceries in each city ex-

cept milk and bread are the average of quotations reported to the Dominion Bureau of Statistics by a number of representative butchers, and grocers in each. Information as to prices of milk, bread and fuel and the rates for rent is secured by the correspondents of the LABOUR GAZETTE, and also by the Bureau of Statistics.

Statistics similar to these were published each month from 1910 to 1920, the figures during this period being secured at the middle of each month by the correspondents of the LABOUR GAZETTE resident in each locality from dealers doing a considerable business with workingmen's households. From 1910 to 1915 the table contained a list of only the twenty-nine foods included in the family budget, with laundry starch, coal, wood, coal oil and rent. In 1915 when monthly publication of the budget in the LABOUR GAZETTE was begun it was decided to extend the list of foods to 40, and in 1920 the list of foods and groceries was still further extended to include over 100 items.

Beginning with October, 1922, a number of commodities were dropped from the list, and in the case of a number of articles the average prices of the grades most sold have been given, owing to the impossibility of securing prices for uniform grades for the various cities from month to month.

The quotations for rent are the prevailing rates for six-roomed houses of two classes in districts extensively occupied by workingmen. The first class is of houses in good condition, favourably located in such districts with good modern conveniences. The second class is of houses in fair condition less desirably located, but still fairly central, without modern conveniences.

The weekly budget for a family of five, calculated in terms of the average prices in the cities for which reports are received, includes twenty-nine staple foods, laundry starch, coal, wood, coal oil, and rent, these being the items for which statistics have been obtained each month and published in the LABOUR GAZETTE since January, 1910. The quantities of each commodity included are modifications of those employed for similar calculations by various authorities. For some articles comparatively large quantities are included owing to the absence of other important items of the same class. For instance, the only fruits are evaporated apples and prunes, and the only fresh vegetable is potatoes. But, as market conditions affecting these usually affect the prices of other fruits and vegetables somewhat similarly, the relative proportions of expenditure on the various classes of foods tends to be maintained. At times when the price of an article heavily weighted for this purpose rises or falls (abnormally) the increase (or decrease) in food prices so indicated is exaggerated, and this should be taken into account in using the budget as an indicator of changes in the cost of living. In fuel and lighting, the quantities are estimated on a similar principle, anthracite coal being used chiefly east of Manitoba, and soft coal and wood in the western provinces, while no allowance is made for the quantities required in the various localities owing to climatic conditions, nor for the differences in the heating value of the various fuels. It was estimated when the budget was first published in 1912, in the report on wholesale prices in

Canada for 1911, that these calculations represented from sixty to eighty per cent of the expenditure of an ordinary family according to the total income. For the average family of five the expenditure on these items of food, fuel, light and rent would be perhaps two-thirds or about sixty-five per cent of the total income.

While the budget serves to show the increase or decrease from time to time in the cost of the items included, it does not purport to show the minimum cost of food and fuel supplies for an average family in the Dominion or in any one province. The quantities of meats, dairy products, cereals, etc., included were adopted as affording a liberal supply for the healthy family of a man at hard physical work. On the other hand an average family with an income sufficient to do so would buy less meat, etc., but more fruit, fresh and canned vegetables, etc., so that comparative expenditure would be little changed.

### Index Numbers of Changes in the Cost of Living

In March, 1921, the Department published in the LABOUR GAZETTE a table of percentages of changes in the cost of living since 1913 as a tentative cost of living index number, using the figures of the above-mentioned budget for the calculation for food, fuel and rent, with preliminary figures for clothing and sundries added and this table has been brought down to date at intervals since. The calculation of a comprehensive cost of living index number covering all items of workingmen's family expenditure in progress since 1918 had been sufficiently advanced to permit the publication of preliminary figures by groups in a supplement to the LABOUR GAZETTE, January, 1926, on Prices in Canada and in Other Countries, page 9. This table gave figures for June and December each year from 1914 to 1926, inclusive. Figures have since been given for March and September each year since 1917 and the accompanying table gives figures for December each year from 1914 to 1921, quarterly from 1922 to 1930, and monthly since January, 1931. As stated in the above-mentioned supplement, the figures in the food group in the family budget are still used to show the changes in food prices but in the other groups the percentage changes in the prices of each article have been weighted according to workingmen's average family consumption, and in the fuel and light groups gas and electricity have been included.

### Cost of Electric Current and Gas for Householders

With rates in 1913 as 100, index numbers of electric light rates were 1900, 141.4; 1905, 135.6; 1910, 118.1; 1911, 113.4; 1912, 109.1; 1913, 100.0; 1914, 96.6; 1915, 90.3; 1916, 86.3; 1917, 84.6; 1918, 82.9; 1919, 81.6; 1920, 81.1; 1921, 81.4; 1922, 80.1; 1923, 77.7; 1924, 76.5;

1925, 73.8; 1926, 73.2; 1927, 70.9; 1928, 69.3; 1929, 67.4; 1930, 64.7; 1931, 64.1; 1932, 63.8.

The above figures were arrived at by converting to the base of 1913 as 100, an index

number of electric current costs from 1900 to 1913 constructed for the Board of Inquiry into the cost of living in Canada, 1913-15 (Report,

(Continued on page 104)

# COST PER WEEK OF A FAMILY BUDGET OF STAPLE FOODS, FUEL, AND LIGHTING, AND RENT IN TERMS OF THE AVERAGE PRICES IN SIXTY-NINE CITIES IN CANADA

The budget is intended to show the changes in the cost of the items included, not to show the minimum cost for an average family

\* Prior to 1926 number of commodities was 236.

(Continued from page 97)

Vol. 2, page 318), and bringing the figures down to 1931. The figures are unweighted. The Dominion Bureau of Statistics has issued an index number of electric current rates for household consumption on the basis of figures in 1926 as 100, as follows: 1923, 108.3; 1924, 105.1; 1925, 101.7; 1926, 100.0; 1927, 99.0; 1928, 97.1; 1929, 94.6; 1930, 92.3; 1931, 89.6.

The following are index numbers of rates for manufactured and natural gas for the years 1913 to 1930 issued by the Dominion Bureau of Statistics: Manufactured gas, 1913, 100; 1914, 98.3; 1915, 98.1; 1916, 96.3; 1917, 100.7; 1918, 107.4; 1919, 111.1; 1920, 125.4; 1921, 143.6; 1922, 140.6; 1923, 135.7; 1924, 134.6; 1925, 131.6; 1926, 131.1; 1927, 128.9; 1928, 128.5; 1929, 128.0; 1930, 126.6; 1931, 125.1; Natural gas, 1913, 100; 1914, 107.0; 1915, 112.5; 1916, 112.5; 1917, 113.9; 1918, 114.0; 1919, 116.1; 1920, 125.1; 1921, 137.6; 1922, 163.2; 1923, 163.0; 1924, 162.2; 1925, 179.3; 1926, 172.4; 1927, 166.9; 1928, 159.3; 1929, 159.5; 1930, 158.8; 1931, 157.6. For the

years 1900 to 1913 two index numbers of gas costs calculated for the Cost of Living Inquiry in 1914-15, have been averaged and converted to the base of 1913 as 100, as follows: 1900, 125.8; 1901, 125.8; 1902, 125.8; 1903, 125.2; 1904, 123.9; 1905, 120.1; 1906, 107.5; 1907, 108.8; 1908, 106.9; 1909, 105.7; 1910, 103.8; 1911, 99.4; 1912, 106.6; 1913, 100.0.

## Retail Prices

Beef prices were lower in practically all localities, sirloin steak being down in the average from 22.7 cents per pound in November to 20.6 cents in December, round steak from 18 cents per pound to 16.5 cents and shoulder roast from 11.9 cents per pound to 10.9 cents. Prices in Quebec and the prairie provinces were lower than in other parts of Canada. Veal and mutton also declined, the former being down in the average from 12.9 cents per pound in November to 12.2 cents in December, and the latter from 18 cents per pound in November to 16.9 cents in December. Fresh roast pork was generally lower, declining in the average from 14.5 cents per pound in

\*The figures for "all items" were calculated by giving the following weights to each group: Food, 35%; Fuel 8%; Rent, 18½%; Clothing, 18½%; Sundries, 20%.

November to 12·9 cents in December. Break-fast bacon averaged 18·6 cents per pound as compared with 19·6 cents the previous month.

Eggs showed a substantial seasonal advance, fresh averaging 45·4 cents per dozen as compared with 38·6 cents in November and 30·3 cents in October, and cooking averaging 32·1 cents per dozen as compared with 29·4 cents in November and 24 cents in October. Prices advanced in all localities. Milk was slightly higher at an average price of 9·5 cents per quart. Increases were reported from St. John's, P.Q., Montreal, Hull, Ottawa and Nelson. A decrease was reported from London. The price of butter showed little change, dairy averaging 22·6 cents per pound in December as compared with 22·7 cents in November and creamery averaging 25·9 cents per pound in December and 26·4 cents in November.

Bread was fractionally lower at 5·6 cents per pound. The price of potatoes advanced considerably in Ontario and other eastern provinces, but showed little change in the west. The Dominion average was up from 80·8 cents per ninety pounds in November to 87·6 cents in December. Evaporated apples were slightly lower in the average at 15·2 cents per pound as compared with 15·7 cents in November. Granulated sugar was unchanged at an average price of 5·8 cents per pound, increases in some localities being offset by declines in others. Anthracite coal averaged \$15·35 per ton in December as compared with \$15·29 in November. Reduced rentals were recorded for Halifax, Belleville, Toronto, St. Catharines, Hamilton and Regina.

## Wholesale Prices

The following is a summary of a statement on wholesale prices changes during the month issued by the Dominion Bureau of Statistics.

No. 1 Manitoba northern cash wheat, Fort William and Port Arthur basis, averaged 42·4 cents per bushel in December as compared with 46·7 cents in November. The low price for the month was 39·4 cents per bushel reached on December 16th and the high 45·5 cents per bushel at the beginning of the month. The decline during the first half of the month was said to be due to the large quantities of Canadian wheat which were being offered and to the increasing competition from the Argentine. The recovery in prices toward the end of the month was due to the unfavourable weather conditions for winter wheat crops in the United States and to decreased estimates of the Argentine crop. In coarse grains western barley was down from 30·3 cents per bushel to 27·8 cents, western oats from 24 cents per bushel to 21 cents, rye from 29·5 cents per bushel to 28·7 cents and American

corn from 71·4 cents per bushel to 67·8 cents. Flax was slightly higher averaging 70·2 cents per bushel as compared with 69·6 cents in November. The price of flour at Toronto was 10 cents per barrel lower at \$4.40. Bran and shorts also declined, the former being 38 cents per ton lower at \$16.87 and the latter 58 cents per ton lower at \$17.87. Raw sugar at New York was down from \$1.25 per cwt. to 94 cents (Canadian funds) and granulated at Montreal declined from \$4.37 per cwt. to \$4.18. Santos coffee at Toronto was 1 cent per pound lower at 19 cents. Raw rubber at New York was down from 4 cents per pound to 3·8 cents. The decrease was said to be due in part to fluctuations in sterling exchange and to the fact that supplies in the United States showed an increase. In livestock, cattle and hog prices declined due to the unusually large numbers available to the market. Choice steers at Toronto were down from \$4.22 per hundred pounds to \$4.10 and at Winnipeg from \$3.51 per hundred pounds to \$3.22. Bacon hogs at Montreal declined from \$4.08 per hundred pounds to \$4.02 and at Winnipeg from \$3.16 per hundred pounds to \$3.08. The price of creamery butter

at Montreal was higher at 23·8 cents per pound. At Winnipeg the price was up from 22 cents per pound to 23 cents. The price of fresh eggs at Montreal and Toronto were substantially lower, in the former city being down from 49 cents per dozen to 40·6 cents and in the latter from 46·4 cents per dozen to 37·8 cents. The price at Winnipeg advanced from 32 cents per dozen to 36·8 cents. Raw cotton at New York was down from 7·1 cents per pound to 6·9 cents (Canadian funds). The decrease was said to be due to the fact that visible supplies in the United States were considerably increased and to the higher crop estimate. Hot rolled and annealed steel sheets advanced from \$3.70 per hundred pounds to \$3.88 and galvanized steel sheets from \$3.35 per hundred pounds to \$3.40. In non-ferrous metals electrolytic copper was down from \$7.31 per hundred pounds to \$7.02, imported copper wire bars from \$5.99 per hundred pounds to \$5.75, tin from 31·5 cents per pound to 30·5 cents and silver at New York from 30·7 cents per ounce to 28·9 cents (Canadian funds). Imported bituminous coal at Montreal was up from \$5.50 per ton to \$5.74.

## PRICES IN GREAT BRITAIN AND OTHER COUNTRIES

THE following notes give the latest information available as to the movements of prices in Great Britain and certain other countries. The index numbers of the cost of living are from official sources unless otherwise stated. The authorities for the wholesale price index numbers are named in all cases. Tables showing cost of living and wholesale prices index numbers for various countries appear in the bulletin "Prices in Canada and Other Countries 1932" which is a supplement to this issue of the LABOUR GAZETTE.

### Great Britain

WHOLESALE PRICES.—The Board of Trade index number, on the base 1924=100, was 60·8 for November, showing no change from the October level. There was a slight advance in food due to higher prices for meat and fish. Non-foods as a whole were lower, due to declines in coal, textiles and miscellaneous commodities. In all groups the changes were very small.

The *Statist* index number, on the base 1867-1877=100, was 77·9 at the end of November, which is 0·1 per cent higher than for the previous month. Vegetable food, sugar, coffee and tea and textiles were all lower, while animal foods, minerals and sundries were higher.

COST OF LIVING.—The Ministry of Labour's index number on the base July 1914=100, was 143 at December 1, showing no change for the last two months. The various groups were also unchanged for the month.

### France

WHOLESALE PRICES.—The index number of the General Statistical Office, on the base 1914=100 (gold basis) was 79 for November, showing no change from October. Advances in animal foods and sugar, coffee and cocoa were offset by declines in vegetable foods, minerals and metals, textiles and sundries.

### Germany

COST OF LIVING.—The official index number, on the base 1913-1914=100, was 118·8 for November, a decline of 0·2 per cent for the month. With the exception of an increase in heat and light, small decreases were shown in all groups.

### New Zealand

WHOLESALE PRICES.—The Census and Statistics Office index number, on the base 1909-1913=1000, was 1295 for October, a decline of 0·5 per cent for the month. Of the seven main groups, five were lower and two were the same as the previous month.

### United States

**WHOLESALE PRICES.**—The Bureau of Labour Statistics index number, on the base 1926=100, was 63·9 for November, a fall of 0·8 per cent for the month. There were declines in farm products, hides and leather products, textile products, metals and metal products, chemicals and drugs and miscellaneous commodities; there were slight increases in foods and fuel and lighting materials, while building materials and house-furnishing goods were unchanged.

*Bradstreet's* index number which is the sum total of the prices per pound of 96 articles of common use was \$6·7906 at January 1, a fall of 1·4 per cent from the level at December

1. Of the 13 groups, four advanced, seven declined and two were unchanged.

*Dun's* index number based on the estimated *per capita* consumption of a year's supply of commodities in wholesale markets, was \$130·166 at January 1, a decline of 2·8 per cent for the month. Declines were recorded in all of the seven groups, the greatest occurring in meat, dairy and garden produce and clothing.

**COST OF LIVING.**—The index number of the Department of Labour and Industries of Massachusetts, on the base 1913=100, was 122·7 for November, a decline of 1·6 per cent for the month. All groups were lower than for the previous month except shelter, which was unchanged.

### Sharing of Work in Agreement in Upholstery Industry at Philadelphia

A plan recently established in the upholstery industry at Philadelphia for securing the sharing of work during dull periods and for setting up a 5-day week and an unemployment insurance fund, is described in the *Monthly Labour Review* (Washington), December, 1932. An agreement, it is stated, was entered into last April by the Upholstery Weavers and Workers' Union No. 25 and the Philadelphia Upholstery Manufacturers' Association, after more than three months' continuous negotiations. The agreement contained provision for a sliding scale of wages, though this was later eliminated as it did not prove practical. It provided for the establishment of collective bargaining machinery, with an impartial chairman whose decisions were to be binding. (This provision is in suspense until conditions improve.)

Another provision establishes an unemployment insurance fund, to which each employer will contribute 2 per cent of his weekly pay roll and each weaver 1 per cent of his weekly wage. The 2-loom system of operation is permitted by the terms of this agreement, under certain conditions and under a wage scale whereby the weaver may earn about 10 per cent more on two looms than he could earn on one loom. No weaver is to be taken off the pay roll because of the introduction of the 2-loom system.

The number of work hours per week has been reduced during a portion of the year. From September 1 to May 31, inclusive, 48 hours constitute a week's work divided into five and one-half days. From June 1 to August 31, inclusive, 40 hours constitute a week's work, divided into five 8-hour days. A system for sharing work is also provided, as follows:

"Whenever it becomes necessary for an employer to lay off weavers because of lack of work, whatever work is available shall be shared among the weavers according to the list system. Under this system the weavers on the pay roll shall be listed; and beginning with the top of the list, the number of weavers for whom work is available shall be employed for the number of days the mill is operating during the week in question. Such employment shall constitute a turn. During the following week the weavers next on the list shall be similarly employed in their turn, each group taking its place at the bottom of the list when it has had its turn at employment. When it is found that 25 per cent of the weavers in a mill have had no employment for one week, such mill shall operate on what is known as the rotary system and shall continue so to operate until such time as this condition is remedied, the number of days of employment to constitute a turn, as above."

## RECENT LEGAL DECISIONS AFFECTING LABOUR

### Accident Insurance Policy Provides only for Continuous Disablement

A young man, employed as signaller in a logging camp in British Columbia, held a policy of accident insurance from an insurance company. The policy contained the provision that if accidental injury "shall at once and continuously after the occurrence of the accidental event wholly disable the insured from performing each and every duty pertaining to his occupation, the insurer will pay said accident indemnity for such period, not exceeding five years, as the insured shall be so disabled after the first three days."

The employee sustained injuries by an accident, for which he was treated in hospital. On leaving hospital he returned to work, but after three weeks he developed synovitis as the result of the accident. When he applied for compensation the company paid him in full for the time lost up to his discharge from hospital, but they refused a further claim for the injury which developed after he had returned to work, on the ground that the continuity of his disability was broken for three weeks.

Mr. Justice Fisher, who tried the case, found in favour of the plaintiff, but on appeal by the company the British Columbia Court of Appeal reversed the judgment of the lower court, finding that, as the plaintiff had worked at his former occupation for a period of three weeks before the original injury again disabled him, he could not recover further compensation, such employment having broken the continuity of disablement which was stipulated in the policy of insurance.

Chief Justice Macdonald, in the course of his judgment said: "It is perhaps a commendable trait of human character to attempt to assist the unfortunate in a case of this kind, but the Court must and does remember that a contract between an individual and an insurance company is to be interpreted on the same principle as other contracts, and that it is not permissible to strain a point in favour of a claim as against the company. Now it is difficult to imagine a clearer and more specific contract than the one here. It is fair and explicit in its terms and in no way ambiguous. The defendant company even warned the plaintiff against the possibility of future trouble in the knee so that had he not been satisfied that he was entirely cured he should have remained in hospital until the cure was beyond question. The company naturally wished to avoid too early a return

to work which might cause a relapse, and therefore the policy was worded so as to exclude responsibility in a case of that sort. The agreement, however, between the parties should be construed in accordance with its terms and with fairest canons of construction without favour to either party."

Mr. Justice Martin and Mr. Justice Macdonald concurred in the foregoing judgment allowing the appeal.

Mr. Justice McPhillips, in a dissenting judgment, said: "It was thought that he (the claimant) had completely recovered from the effects thereof (i.e., of the accident), and it would appear it was thought that he had completely recovered from the effects thereof—but as the learned trial judge has found that was not the case, and a mistake of fact occurred. The appellant insists that, because the young man mistakenly thought he was recovered and went to work, although it is now established he was not full recovered, nevertheless all benefits under the policy are gone. I cannot but observe when reading the evidence in this case that it is a matter for comment that the appellant resists payment. The young man, to his credit, went to work in good faith, but immediately it was shown he was not able to work effectively—he struggled along for three weeks—receiving first aid every day for some three weeks—when he was able to go to Vancouver by steamer. The medical evidence is complete upon this point, and an operation had to be performed attributive solely to the accident. With regard to the claimed release given by the young man to the appellant, that, in my opinion, is valueless in law; further it was given in the belief that he was full recovered when it turned out not to be the fact. The learned trial judge, upon the evidence, in my opinion was full justified in holding as he did that the young man was continuously after the occurrence of the accidental event wholly disabled, and for a long time thereafter disabled from performing each and every duty pertaining to his occupation.

*Matthews versus Continental Casualty Company* (British Columbia), 1932, *Dominion Law Reports*, vol. 4, page 667.

### Industrial control features in dairy industry legislation of British Columbia are *ultra vires*

The Judicial Committee of the Privy Council, in a decision handed down on November 10, 1932, declared that certain levies imposed

on dairy farmers in the province under the provisions of the Dairy Products Sales Adjustment Act of 1929 (amended 1930 and 1931), were *ultra vires* of the provincial legislature. The Lower Mainland Dairy Products Sales Adjustment Committee, a body established under the Act, had ordered the defendants, an incorporated company of milk distributors, to make returns of all milk or manufactured products purchased or received by them from dairy farmers. The defendants resisted the order, claiming that the Act was beyond the competence of the Legislature. The Committee then brought an action, which was dismissed by Mr. Justice Murphy, his judgment being sustained by the Court of Appeal of British Columbia. Lord Thankerton, who delivered the judgment of the Privy Council, explained the provisions of the Act as follows:—

"Sec. 3 of the Act of 1929 authorizes the Lieutenant-Governor in Council, upon a petition supported by 66 per cent of the dairy farmers present at a meeting held in terms of sec. 4, to appoint an Adjustment Committee, in such portion of the province as may be set forth in the order, to ascertain and apportion between the dairy farmers the returns received from the sale of milk on the fluid market and the sale of manufactured products, which are defined as any product manufactured wholly from, or derived by any form of treatment from, milk. The appellant committee were so appointed in 1929 for the Lower Mainland District of the province. The chief market for disposal of fluid milk in that district is in the cities of Vancouver and New Westminster.

"It is common ground," the judgment continued, "that disposal of milk in its fluid form affords a better return to the dairy farmer than its disposal in manufactured form and, as the Act makes clear, the purpose of the Legislature was to relieve congestion in the fluid milk market, caused by a shortage of demand. Broadly stated, this object is attained by the committee fixing monthly the standard prices for fluid milk and manufactured products respectively and the weight and quantity of each sold or disposed of by all the farmers in the district, based on returns compulsorily obtained from them, and thereafter apportioning the difference between the total value of the sales of each, calculated at the respective standard prices, over the whole body of farmers, in proportion to the weight of fluid milk sold or disposed of by each farmer. Each farmer is then bound to contribute his share of the apportionment to the Committee, who apportion and pay the total amount so received to the farmers who have sold or disposed of the manufactured products. This

contribution by the farmers is hereinafter called the 'adjustment levy'. The expenses of the Committee are met by a compulsory levy collected from the farmers, hereinafter called the 'expenses levy'. The adjustment levy and the expenses levy are both recoverable by the Committee as a debt (sec. 11), and the committee may also require from the farmer an order for their amount on the purchaser of the farmer's milk or manufactured products (sec. 9g).

"The main question at issue between the parties is whether the imposition of these levies, or either of them, involves taxation within the meaning of secs. 91 and 92 of *The British North America Act, 1867*, ch. 3, and, if so, whether they constitute direct taxation within the meaning of sec. 92 (2) of the Act. Both the courts below have held that both these levies are taxes and do not constitute direct taxation, and that the legislation is *ultra vires* of the province. Mr. Justice M. A. Macdonald felt bound by the decisions to hold, contrary to his personal view, that the adjustment levy was taxation and indirect; while holding that the expenses levy was an indirect tax, he doubted whether on that ground alone the whole Act would have to be regarded as *ultra vires*.

"In the first place, it is clear, in the opinion of their Lordships, that the substantive provision of the Act of 1929 is to transfer compulsorily a portion of the returns obtained by the traders in the fluid milk market to the traders in the manufactured products market; the other statutory provisions afford the machinery by which this is enabled to be done. The decision of this appeal turns mainly, if not entirely, on whether such a compulsory transfer is within the legislative competence of the province."

Having analysed the contentions of both parties, Lord Thankerton proceeded: "In the opinion of their Lordships, the adjustment levies are taxes. They are compulsorily imposed by a statutory Committee consisting of three members, one of whom is appointed by the Lieutenant-Governor in Council, the other two being appointed by the dairy farmers within the district under sec. 6 of the Act. They are enforceable by law, and a certificate in writing under the hand of the chairman of the Committee is to be *prima facie* evidence in all courts that such amount is due by the dairy farmer (sec. 11). A dairy farmer who fails to comply with every determination, order or regulation made by a Committee under the Act is to be guilty of an offence against the Act (sec. 13), and to be liable to a fine under sec. 19. Compulsion is an essential feature of taxation (*Halifax City v. N.S. Car-*

Works, 1914, A.C. 992, at 998, 84 L.J.P.C. 17). Their Lordships are of opinion that the committee is a public authority, and that the imposition of these levies is for public purposes. Under sec. 22 the Lieutenant-Governor in Council has power to suspend the functions of a Committee, if its operations are adversely affecting the interests of consumers of milk or manufactured products, and the Committee is to report annually to the Minister and to send him every three months the auditor's report on their accounts (secs. 12 (2) and 8a). The fact that the moneys so recovered are distributed as a bonus among the traders in the manufactured products market does not, in their Lordships' opinion, affect the taxing character of the levies made. The district here affected is a considerable part of the whole province, but the Act might have still wider application within the province. While not saying that these elements are exhaustive of the elements which might be found in other cases to point to the same conclusion, their Lordships are of opinion that they are sufficient to characterize the adjustment levies in the present case as taxes. . . . It seems to follow that the expenses levies in the present case, which are ancillary to the adjustment levies, must also be characterized as taxes. . .

"Their Lordships are therefore of opinion that the Act of 1929, as amended, was not within the legislative competence of the province, and that the decision of the courts below was correct. They will humbly advise His Majesty that the judgment appealed from should be affirmed and that the appeal should be dismissed. In accordance with an arrangement between the parties there will be no order as to costs."

### Classification of Risks Under Accident Insurance Policy

A young man held an accident insurance policy with the Metropolitan Life Insurance Company, his occupation being given in the policy as that of a book-keeper. Having been laid off from that occupation and being the sole support of his mother and sister, he ob-

tained odd jobs, and in April, 1932, he was working as a rough carpenter in connection with work on a dam which was being carried on as a relief measure. On this work the men were hired from hour to hour. If a man worked for a day there was no assurance that he would get work on the following day. A man applied for work in the morning and was then informed whether or not, under the system followed, he would get work. The plaintiff worked in this way on April 12 and April 13. On the morning of April 14, he, with some others, was on his way out to the dam again to apply for work. A truck came along and when opposite the parties slowed down apparently inviting the workmen to have a ride. In seeking to board the truck while moving, the plaintiff's foot was crushed. He was taken to the hospital where he remained some months and then his foot was amputated.

The company agreed to pay accident benefits, but claimed that the amount should be reduced pursuant to the following provision in the policy:—

"If a bodily injury or any sickness insured against happens to the insured while engaged temporarily or permanently in an occupation classified as more hazardous than that stated herein to be the occupation of the insured, the liability under this policy shall be limited to such amount as the premium paid would have purchased for the more hazardous occupation according to the limits, classification or risks and premium rates of the insurer last filed with the Superintendent of Insurance; provided that the performance of ordinary duties about his residence or while engaged in recreation shall not be regarded as a change of occupation by the insured."

Mr. Justice Ewing, in giving judgment in the Alberta Supreme Court, pointed out that no "classification of risks" such as was mentioned in the foregoing provision, had been filed by the Company at the date when the policy was issued, and that therefore there was no effective classification on which the company could base a claim for reduction of its liability. Such a classification was filed subsequently, but his Lordship held that the present claim was not affected thereby. He therefore gave judgment for the full amount due under the policy without reference to the provision as to reduction quoted above.

[NUMBER 2

## NOTES ON CURRENT MATTERS OF INDUSTRIAL INTEREST

### Monthly Summary

A SEASONAL contraction in industrial employment was shown at the beginning of January, 1933, the resulting losses involving a rather smaller number of workers than those indicated on January 1, 1932, and being also considerably less than the average decline indicated at the opening of the preceding eleven years. The Dominion Bureau of Statistics tabulated statements from 7,947 firms, each with at least 15 employees, in all industries except agriculture, fishing, hunting and highly specialized business. The payrolls of these concerns declined from 763,561 persons on December 1 to 721,308 at the beginning of January, a decrease of 42,253 persons, or 5½ per cent. Reflecting this contraction, the employment index number (based upon the 1926 average as 100) stood at 78.5 on January 1, 1933, compared with 83.2 in the preceding month, and 91.6 on January 1, 1932. On the same date in the preceding eleven years, the index was as follows: 1931, 101.7; 1930, 111.2; 1929, 109.1; 1928, 100.7; 1927, 95.9; 1926, 90.7; 1925, 84.9; 1924, 89.8; 1923, 87.3; 1922, 78.8, and 1921, 88.8.

At the beginning of January, 1933, the percentage of idleness reported to the Department of Labour by local trade unions was 25.5, as compared with 22.8 per cent at the beginning of December, 1932, and 21.1 per cent at the beginning of January, 1932. The percentage for December was based on the returns tabulated by the Department of Labour from a total of 1,764 labour organizations with a membership aggregate of 155,298 persons.

Reports received from the Offices of the Employment Service of Canada for December, 1932, indicated an increase in the volume of business over November, but a decline from the corresponding month a year ago, this comparison being based on the average number of placements effected daily throughout the Service. Services, and construction and maintenance recorded the heaviest gains over November, the latter group also showing the outstanding loss from December, 1931. Vacancies in December, 1932, numbered 30,885, applications 49,736, and there were 29,192 placements in regular and casual employment.

The average cost per week of a list of twenty-nine staple foods for an average family of five in terms of the average retail prices in sixty-nine cities was again slightly lower at \$6.94 for January, as compared with \$7.04 for December, 1932; \$7.68 for January, 1932; \$9.86 for January, 1931; \$11.88 for January, 1930; \$11.30 for January, 1929; \$11.03 for January, 1922; \$16.92 for June, 1920 (the peak); and \$7.73 for January, 1914. In wholesale prices the index number calculated by the Dominion Bureau of Statistics was also slightly lower at 63.9 for January, as compared with 64.0 for December, 1932; 69.4 for January, 1932; 75.9 for January, 1931; 95.3 for January, 1930; 94.0 for January, 1929; 97.1 for January, 1922; 164.3 for May, 1920 (the peak); and 64.9 for January, 1914.

The loss in working time caused by industrial disputes in Canada was less than that recorded for December, 1932, and was also less than the corresponding loss in January, 1932. Eight disputes were in progress at some time during the month, involving 622 workers, and resulting in the loss of 5,936 working days. Corresponding figures for December, 1932, were: eleven disputes, 2,854 workers, and 9,146 working days; and for January, 1932, twelve disputes, 1,117 workers, and 8,280 working days.

### Industrial Disputes Investigation Act

A Board of Conciliation and Investigation was appointed during January in connection with a dispute between the Winnipeg Electric Company and its motormen, conductors and busmen. In the case of another application, noted in the last issue, it was found that the circumstances did not warrant the appointment of a Board. Prosecutions under Section 60 had been commenced at the close of December, certain employees being charged with having gone on strike contrary to the provisions of the Act, but these charges were withdrawn early in January, an agreement having been reached between the parties to the dispute. An account of the proceedings during the month appears on page 125.

### **Employment insurance proposed in Quebec**

age pensions, unemployment insurance, and sickness and disability insurance. The earlier reports covered child protection and mothers' allowances, family allowances and industrial hygiene.

The sixth report, on the subject of unemployment insurance, recommends, as a preliminary measure, the establishment of a system of Employment Insurance. This is stated to be a combination of the insurance principle with a program of public works drawn up by a committee of specialists. Workers who contributed to the "Employment Insurance Fund" would, when unemployed, be offered employment in connection with the public works program. The wages of these workers would be paid entirely from the employment fund, this fund being maintained jointly by the employers' and workers' contributions. The rate of wages for such work would be a definite proportion of the established "fair wages", and work would not be guaranteed for more than 26 weeks. Workers who could not adapt themselves to such work would receive a minimum grant paid partly by the fund, and partly by the government.

The commission suggests that this plan would afford a remedy for "one of the most serious results of unemployment—forced inactivity". Moreover, "the undertaking of numerous works of public necessity and utility would certainly have a beneficial result on a large number of industries and develop a buying power which in time would stimulate commerce and national production."

### **Increased compensation assessments in New Brunswick**

The New Brunswick Workmen's Compensation Board recently announced the rates of assessments to be levied for the current year on employers in the various classes of industry in the province. These assessments show a general increase of 10 per cent in the assessment rates, the increase being for the purpose of building up a fund that could be used either in cases of disaster or to stabilize the rate on an industry on which the rate has become oppressive. It will be recalled that the Act was extensively amended at the last session of the provincial legislature (LABOUR GAZETTE, November, 1932, page 1179), one of the amendments being in

order to enable the Board to increase the assessments for such purposes.

After the publication of the Board's new rates the Maritime Division of the Canadian Manufacturers' Association, meeting at Saint John, adopted a resolution in which they asked for the cancellation of the increase in all industrial classes where surpluses exist, and recommended that sums collected from any increased assessments not so cancelled be added to group or class current funds, and not set aside for any reserve fund for any special purpose. The resolution claimed that "present economic conditions constitute a disaster which is more of a burden on industry than any probable future disaster involving injuries to workmen;" and that "the stabilization of rates in industries where accident experience is poor removes most of the incentive for those industries to endeavour to better their accident experience."

### **Cost of medical aid in Quebec and Ontario**

The effects of the provision in the Workmen's Compensation Act of Quebec which permits an injured workman to choose his own medical doctor, were discussed by the Honourable L. A. Taschereau, the provincial premier, before a delegation from the Federation of Catholic Workers of Canada on February 3. The provisions of the Act of 1931 were outlined in the LABOUR GAZETTE, May, 1931 (page 525). The premier invited the delegation to consider whether it might not be in the workers' own interest to change the existing system in regard to medical aid. Industry, he said, was called upon to pay more for compensation in Quebec than in Ontario, largely because the Quebec workman had the right to choose his own physician, the doctors being exposed to the temptation "to keep cases running". . . "I think that the first to suffer will be the workmen because of the higher medical costs. If new industries go to Ontario instead of coming here, we will have to consider the matter; otherwise it will be to the advantage of Ontario and its industries if our costs are maintained higher. So far as we are concerned, we have an interest in the industrial development of the province, and so have you, and if we find that errors have crept in, it will be for us to show the courage to provide the remedy."

The Ontario Act provides that medical aid "shall be furnished or arranged for by the Board or as it may direct or approve, and shall be paid for by the Board out of the Accident Fund."

### Child labour problems during the present emergency

The character and extent of the employment of children in the United States at the present time were investigated at a conference on present day child labour problems, which was held at Washington in December, under the auspices of the Children's Bureau of the U. S. Department of Labour. The delegates included representatives of State Departments of Labour, and of labour educational, welfare and other organizations. It was found that while child labour shared in the general decline in the volume of employment, there had arisen a "relentless pressure on labour standards as a consequence of the existing labour situation," resulting in "a new variation of the old sweat shop, with unbelievably low wages and long hours for children as well as for adults." The delegates agreed unanimously that in the interest of both adults and children, legislation should be enacted this winter to provide that during the economic crisis every available job should be given to an adult. It was further recommended that sixteen years should be the basic minimum age for employment, while the age between 16 and 17 should be a regulated period, the working hours being less than those of adults, with "minimum wage" protection for those under 18 years and extra compensation for injured minors illegally employed. The conference further recommended that Bureaus of Women and Children in State Labour Departments should be established or strengthened as an aid in the enforcement of law and in the education of public opinion; and pledged its members to assisting schools to maintain their budgets during the present emergency.

### Need for regulation of children in street trades

A study of street trades and their effect on young children was made under the direction of the Children's Aid Society of Hamilton, Ontario, during the summer of 1932, and a report of the investigation recently appeared. The Society felt that some control over the employment of children on the streets was necessary, and in their pamphlet they propose remedies that would, they claim, give reasonable consideration to the economic needs of the children's families, and not interfere with the circulation of newspapers. The investigation, which was carried out by Mr. F. C. Jackson, of the University of Toronto, showed that when children work on the streets during the daylight hours after

school they cannot obtain wholesome recreation, regular meal hours or home training. Newsboys are found to have a comparatively high delinquency rate—"the moral influences surrounding the work are bound to leave their mark upon such impressionable material." It is stated that "the intensive competition, with young boys responsible for their 'left-overs,' is a strong incentive to late nights and shady practices. . . . In view of the facts stated, we find ourselves able to arrive at but one conclusion. We have legislation promoting child welfare, and it is equally important that these provisions be administered in street work, as well as in other forms of child labour in industrial occupations. The chief reason for the fact that the clauses in the Children's Protection Act of Ontario and the By-laws of the City of Hamilton have not been enforced, is the lack of recognition of their importance on the part of the public, and this study has been made with the express intention of bringing some of the facts forward for attention and necessary action."

The Society recommend that consideration be given to the passing of a new city by-law "along the line of limitation of children selling, as outlined in provincial legislation," and the inauguration of some system of identification by means for instance of badges.

The Ontario Children's Protection Act, section 141, dealing with street trades, provides as follows: "(1) no girl under 16 years of age and no boy under twelve years of age shall engage or be licensed or permitted to engage in any street trade or occupation; (2) no boy under sixteen years of age shall engage in any street trade or occupation between the hours of ten o'clock in the afternoon and six o'clock in the forenoon of the following day."

### 6-hour day debated in the Senate

The Hon. Pascal Poirier moved in the Senate on February 6 "that in the opinion of this House, six hours should constitute one full day's work for labourers, in the manufacture and in the mine, and also for artisans, handicraftsmen and hired common day labourers; furthermore, that more effective encouragement should be given to the return to the land".

During a short debate it was pointed out by the Hon. James Murdock and other senators that the subject of the motion was beyond the competence of the Senate or of the Parliament of Canada. The Hon. Senator G. D. Robertson recalled that the first International Labour Conference, held at Washington in 1919, went

on record as in favour of an eight-hour day. "As Canada," he continued, "has failed to adopt legislation for an eight-hour day in industry, as recommended some thirteen years ago, in my humble opinion it would be out of the question now to expect that a proposal for the six-hour day would be acted upon. For a good many years I have had something to do with improvement of working conditions, both as to hours and compensation, particularly as affecting railway employees, and in a lesser degree labour generally; and while I appreciate and sympathize with the ideal that is behind the resolution, I could not support the motion with any hope of its becoming law at this session of Parliament." The motion was negatived.

### Work of the South African Wage Board.

A recent report of the South African Wage Board describes the results of the Wage Act during the past six years. The Board was set up under the Wages Act of 1925, to which far-reaching amendments were made by an Act of 1930. Its principal object is to fix wages in those industries which are not sufficiently organized to be covered by the system of statutory collective agreements established by the Industrial Conciliation Act. On request by the Minister of Labour, the Board makes an investigation into wages, hours of labour or conditions of employment in any trade or section of a trade. If it is able to recommend that such rates of wages be paid as will enable the workers in that trade to support themselves in accordance with civilized habits of life, it transmits to the minister a detailed recommendation fixing such rates. The recommendation is then published as a proposed determination to allow objections to be lodged, and is finally promulgated by the minister, with any necessary amendments, as a determination which has the force of law. Such a recommendation and the resultant determination may apply to the whole country or to a particular region.

The report claims that the effect of wage determinations has been to increase efficiency. In support of this claim details are given of the results in several trades, particularly the clothing, sweet-making, and dyeing and cleaning industries. As regards costs of production, the Board declares not only that low wages do not imply low costs of production, but that the evidence it has collected on wage costs goes to show that the contrary is the case. The report observes that one employer in Durban admitted that in a trade where wages were low, there was a tendency to employ more workers than were actually required.

In answer to numerous allegations that wage determinations have caused unemployment, the report states that no proof has been advanced that they have reduced the number of workers in any industry. It recognizes that they have caused considerable displacement of employees, but it points out that this does not necessarily mean a reduction in the total number employed. Statistics of the number of workers employed by several industries, before and after the issue of wage determinations, are given in support of this contention.

### Cost of unemployment insurance.

Some account of the recent report of the Ohio Commission on Unemployment Insurance appeared in the LABOUR GAZETTE, December,

1932, page 1309. The following table from the report of the Commission shows the amount of unemployment insurance that can be bought for various premiums ranging from 2½ per cent of the annual wages paid to the insured employee up to 5 per cent. As already noted, the Commission reached the conclusion that a reasonable amount of protection could be purchased for approximately 3 per cent of payroll, a price which, when shared by employers and workmen, would not represent an unreasonable charge upon industry. This percentage would buy the following amount of insurance: a benefit of 50 per cent of the normal weekly wage of the insured, beginning after a waiting period of three weeks, and payable for a period of 16 weeks, the maximum benefit in no case exceeding \$15 a week. The results of the calculations made by the Commission are shown in the following table:—

| Per Cent of payroll | Will buy benefit of 50% of wages |                                  |                           |
|---------------------|----------------------------------|----------------------------------|---------------------------|
|                     | For a Period of                  | With a Maximum Weekly Benefit of | After a Waiting Period of |
|                     | weeks                            | \$                               | weeks                     |
| 2.55.....           | 13                               | 15 00                            | 4                         |
| 2.75.....           | 13                               | 15 00                            | 3                         |
| 2.94.....           | 13                               | 15 00                            | 2                         |
| 2.94.....           | 13                               | 17 50                            | 3                         |
| 3.13.....           | 13                               | 17 50                            | 2                         |
| 3.26.....           | 16                               | 15 00                            | 3                         |

| 4.36.....           | 26                               | 15 00                            | 3                         |
| 4.40.....           | 20                               | 17 50                            | 2                         |
| 4.67.....           | 26                               | 17 50                            | 3                         |
| 5.03.....           | 26                               | 17 50                            | 2                         |

### **Movement towards compulsory unemployment reserves in U.S.A.**

In December, 1930, the American Association for Labour Legislation published a tentative plan for unemployment reserve funds (LABOUR GAZETTE, February, 1931, page 120).

The rapid progress since made in this direction in the United States was described in the *American Labour Legislation Review* (published by the Association) for December, 1932. The Wisconsin Act relating to Unemployment Reserves and Compensation (the first measure of its kind to be enacted in the United States) was outlined in the LABOUR GAZETTE, March, 1932, page 323; April, 1932, page 379. References have been made in the LABOUR GAZETTE also to the reports of the Interstate Commission on Unemployment Insurance (April, 1932, page 380); the report of the U.S. Senate Committee on Unemployment Insurance (August, 1932, page 844); and the report of the Ohio Commission on Unemployment Insurance (December, 1932, page 1309). Other State commissions have recently reported in favour of the principle of unemployment reserves, namely, the New York Joint Legislative Commission on Unemployment, the California State Unemployment Commission, the Massachusetts Commission on the Stabilization of Employment; and the Baltimore Municipal Commission on Employment Stabilization. Moreover, the American Federation of Labour, at its 52nd annual convention last November, reversed its earlier position and went on record as in favour of unemployment insurance (LABOUR GAZETTE, December, 1932, page 1270). A year ago the New York State Committee on the causes of unemployment reported in favour of "the establishment at the earliest possible date of a compulsory state-wide system of unemployment Reserves," and laid stress on "the absolute necessity of a system of universal unemployment benefit plans." The Massachusetts Commission, in their report made public in December, recommended a "system of state-compelled unemployment reserves," pointing out that "there are to-day only a small fraction of employees under any form of unemployment insurance or reserves," and that "at the same rate of growth, it would be decades before a much larger fraction would be covered." The commission therefore expressed the conviction that "unless the state makes a start, there will be no appreciable progress." Enactment of legislation providing for compulsory unemployment reserves was also advocated by the California State Unemployment Commission.

The Baltimore Municipal Commission on Employment Stabilization, by unanimous vote, recently decided to secure the introduction of a compulsory unemployment insurance bill in the Maryland Legislature which was to meet in January.

### **Federal Commissioner for employment in Germany**

Under an order of the German President, dated December 15, provision was made for the appointment by the President, on the nomination of the Chancellor, of a federal Commissioner for Employment. The function of the commissioner is to promote and accelerate the institution of co-ordinated measures for the expansion of employment. In the exercise of this function, he is to work in conjunction with the competent ministries, but is answerable only to the Chancellor. At the headquarters of the commissioner, which are to be situated in Berlin, the Chancellor is to appoint a committee of members of the federal government, and may himself assume its presidency. The committee is to be competent to decide respecting the principles to govern the institution of measures for the expansion of employment and the extent to which approval may be given to schemes of work which do not conform to these principles or which are of particular importance. To assist him in the discharge of his duties the commissioner may appoint and convene an advisory committee. He may also delegate his powers to other federal authorities and to officers of the federal Employment Exchanges and Unemployment Insurance Board, as well as to the state and local authorities. All public authorities are bound to give the commissioner every assistance in the discharge of his duties, free of charge.

The new federal Commissioner is Dr. Gereke, the author of a widely discussed scheme of productive relief works and President of the Congress of Rural Communes.

The Order of December 15 also provides that, for the purpose of securing unified and co-ordinated action in the sphere of agricultural settlement, a committee of members of the federal government is to be set up to assist the federal Minister of Food and Agriculture in the discharge of his duties in this connection, in particular, in the work of laying down and applying principles to govern agricultural settlement. The Chancellor may himself assume the presidency of the committee; the Commissioner for Employment is to act as his deputy. The federal government is empowered to issue such orders and regulations as may be necessary for the carrying out of measures for the creation of employment and agricultural settlement.

### Dismissal Compensation Plans in United States.

A preliminary report describing the plans of eighty companies in the United States for compensating their employees in the event of their dismissal was published recently by the Industrial Relations Section of Princeton University. The material for the study was collected last summer among companies normally employing 1,400-000 workers in 27 cities, and representing the principal industries as well as department stores. The new report supplements a bulletin on the same subject published in 1931, where this new development in the field of industrial relations was described as arising out of "the growing recognition that the worker of long service has a certain right or claim to his job." Dismissal compensation takes many forms. The custom of giving one or two weeks' pay to dismissed office workers is nearly universal, but there has been a tendency to extend protection to hourly workers. Many of the plans now in effect in regard to wage earners make one of the following provisions: One week's pay for each four years of service; half a month's pay for each year of service; three to five month's pay for 15 to 30 years of service, etc. Lump sum payments were favoured at first, but periodic payments are now preferred owing to the increasing emphasis on relief. "As with many new departures in industrial relations technique, dismissal compensation plans have frequently been initiated as distinct and separate elements in the whole company program. More recently, however, these plans have become integrated with other policies. Several companies have found that they must include earned vacation rights with the regular dismissal payments. Many dismissed employees have received considerable sums of money through settlements under plans for contributory pensions, profit sharing, and stock purchase. Insurance companies and brokers have pointed out that retirement plans may be written with definite provisions for unemployment. Some of the plans suggested come closer to those for dismissal compensation than for unemployment benefits."

### Improvement in standard of living in London in 40 years.

The London School of Economics recently published *The New Survey of London Life and Labour* (London: P. S. King and Son, Limited), giving the results of an investigation of social conditions on lines somewhat similar to those of the investigation carried out by Charles Booth in 1890. Reviewing the fourth

volume of the *New Survey*, relating to East London, the *Statist* notes an "astounding fall" in the proportion of families in poverty as compared with forty years ago. The poverty line was drawn in 1890 at workers with bare income of 18 to 20 shillings per week, for a moderate family. By a study of price changes the *New Survey* found that a weekly income of 38 to 40 shillings in 1929 was equivalent to about 21 shillings of the earlier survey. On this basis it is shown that in a "full-time" week 6.3 per cent of the families in the Eastern Survey Area were below the poverty line, the proportion varying from 14.5 per cent in Poplar to 1.0 per cent in Leyton. In the week of investigation the general percentage is raised to 11 per cent, varying from 19.5 per cent in Poplar to 2.5 per cent in Leyton. Commenting on these figures the *Statist* says: "The general proportions of 6.3 per cent in a 'full-time' week and 11 per cent in the week of investigation show a satisfactory and even an astounding fall in the proportion of families in poverty, for 40 years ago Charles Booth's investigations showed a comparable proportion of 38 per cent. At the same time the satisfaction caused by the decline in the proportion to one-third of its original amount must be modified by the conclusion which the *New Survey* reaches that the large number of 284,600 persons in private families in the Eastern Survey Area were living below Charles Booth's poverty line.

"One striking fact is that unemployment has risen to the position of a major influence in poverty from a minor position in Charles Booth's day. Though unemployment insurance and other social services have kept a large proportion of families suffering unemployment above the poverty line, the relative rôles of deficient wages (a major factor forty years ago) and unemployment in causing poverty have been interchanged. The *New Survey* finds 'that such part of East London poverty as is not caused by deficient working capacity (e.g. the death, age or infirmity of the head of the household) is attributable in a preponderant degree to unemployment or casual work, and only a very minor degree to low rates of wages'. It does not follow, of course, that the whole of the London unemployed are living below the poverty line. A special inquiry carried out by the *New Survey* showed 'that out of every 100 families in the Eastern Survey Area, whose principal wage earners were unemployed at the time of the inquiry, 55 were classed as living below the poverty line as the basis of the weekly income.' From this result, supported by the results of a similar inquiry, it appears probable that about half

the total adult persons registered as unemployed would be living below the poverty line."

**Changing outlook of British Labour.** The improvement noted above in working conditions in Great Britain in recent years is also the subject of comment in a new report published by the International Labour Office (Geneva) on "Industrial Relations in Great Britain" (Studies and Reports, Series A, Industrial Relations, No. 36). The following conclusions are among those reached in this report:—

"The diminution of poverty which has resulted from improvement of the real wages of unskilled workers and the establishment of comprehensive schemes of social insurance may be expected to reduce discontent and unrest. . . . Signs are not wanting that changes of outlook are slowly taking place. The old spirit of bitterness and violence of the nineteenth century resulting from low standards of working conditions, unwillingness of employers to recognize organizations of workers, and often their determination to destroy the unions, is giving place to better mutual understanding. More reliable data are being brought under review during negotiations, there is a greater willingness to face the facts, and, in consequence, the margin of difference between the two sides is being narrowed. Experience of the heavy losses to employers and workers caused by national conflicts is teaching the lesson that the technique of negotiation of pre-war days, when break-downs usually involved only local stoppages, is not appropriate under present conditions. Above all, there is growing recognition of the common interests of employers and workers in the prosperity of British industry, especially in view of the intensity of post-war international competition. It is upon these common interests both within the undertakings and in the wider field of collective relations that the foundations of industrial peace must be built."

The present report, which was prepared by Professor J. H. Richardson, of Leeds University, begins with a general outline of the economic and social background. Reviews are then given of the development, structure and policy of the trade union movement and of employers' organizations. The joint machinery established voluntarily for negotiation and conciliation of disputes is examined, and an account is also given of the State systems of conciliation and arbitration and of minimum wage regulation. In addition to this

survey of collective relations, the methods applied in progressive undertakings with a view to the establishment of good relations between the management and workers are described. Among the methods discussed are joint consultation in works councils, and various measures of industrial welfare and labour management which have been increasingly adopted during recent years.

#### **Vocational guidance in Great Britain.**

The annual report on the work of local committees for juvenile employment in Great Britain brings the information on this work down to the end of 1931. These committees assist in the work of advising boys and girls between the ages of leaving school and 18 years in their choice of a career, placing them in employment and supervising them during their early working life. They are composed of representatives of the local education authority, of teachers, representatives of employers and workers in the area, and of individuals having special knowledge or interest in the welfare of young people. Apart from their primary object of advising boys and girls in regard to their establishment in employment the committees seek to ensure that an adequate supply of juvenile labour may be available for the employers in the area. Advisory Committees for Juvenile employment were first established in 1910, and some of these, at the time the present report was issued, had been continuously at work for twenty-one years. Some of the Juvenile Employment Committees, though not formerly recognized on a statutory basis, have still older origins.

The reports of committees, it is stated, "reveal that frequently neither parent nor child has any fixed ideas, at the time the child leaves school, on the subject of an appropriate occupation. On the one hand, there is the common phenomenon of the boy or girl who has no real knowledge of local opportunities of work, and is prepared to change his views on suitable employment ten times in as many minutes. At the other end of the scale there is the type of boy or girl who determines with fixity of purpose, not always conceived in relation to the nature of local industry, on some particular form of livelihood. Within these limits, there is the large number of children who appreciate and benefit from the friendly advice which the Committee can afford. 'The sympathetic interest of committee members has often enabled juveniles to envisage the possibilities of forms of employment which had not

occurred to either parent or juvenile. These friendly talks have frequently resulted, for example, in boys 'taking a chance' by agreeing to accept employment in other—more prosperous—areas; and girls who previously would not consider employment in domestic service have been successfully placed in this class of work subsequent to the interview."

The 1933 Safety Convention will be held on April 27-28 at Toronto, under the auspices of the Industrial Accident Prevention Associations of Ontario.

New regulations have been published under the Theatres Act of Alberta. They relate to the construction and equipment of theatres and entertainment halls and include rules for the licensing of projectionists and apprentices, and for the care and operation of motion picture equipment.

The Manitoba Minimum Wage Board on January 20, 1933, ruled that there shall be a ten per cent reduction in the scale of minimum wages for female employees in the Province of Manitoba, for one year, the reduction to take effect one month from January 28, the date of the publication of the notice in the *Manitoba Gazette*.

Only two railroad strikes were brought to the attention of the United States Board of Mediation from August 1, 1926, to June 30, 1932, and these two were of little significance and were attended by no substantial interruption of interstate commerce, according to the annual report of the board for the fiscal year ending June 30, 1932. During this period many strike ballots were taken, involving a number of carriers and labour organizations, but the disputes which led to the submission and receipt of such ballots were ultimately settled in an orderly way.

Notice of the incorporation of the "Merritt Co-operative Coal Mining Association" as an association under the Co-operative Associations Act appeared in the *British Columbia Gazette*, January 5, 1933. The denomination of shares is \$10 each. The objects of the Association are: to carry on the business of coal mining and coal dealing, and to acquire coal mining properties in or near Merritt, B.C.; to arrange for the acquisition of rights and privileges in regard to supply of goods, and for medical and surgical attention and hospital treatment; and to make arrangements with the Workmen's Compensation Board for employees of the Association to be brought within the provisions of the "Workmen's Compensation Act."

The Australian Council of Trade Unions recently declared itself to be in favour of a policy of a 30-hour working week of five 6-hour days, and a 25 per cent increase in wages. The organization also advocates the nationalization of banking and insurance.

During the month of January there were 2,643 accidents reported to the Ontario Workmen's Compensation Board as compared with 3,601 for the same month last year. The fatal cases numbered 14, as compared with 19 last January. The total benefits awarded amounted to \$237,056.88, of which \$184,199.02 was for compensation and \$52,857.86 for medical aid.

An average of 111.2 days per building was required to complete the work on all buildings for which permits were issued in 10 representative cities in the United States in 1931, according to reports received by the Bureau of Labour Statistics. In 1929 this average was 132 days per building. One-family frame dwellings erected in 1929 averaged 98.4 days in process of construction, while for the same class of dwellings erected in 1931 the average was only 88.8 days. In addition to showing how long employment was available on different types of buildings, the article shows how many permits were allowed to lapse or remain unused after they were applied for, and how soon after the building permit was issued work was available in the construction of the building.

#### A. F. of L. Program of Recovery

A delegation from the American Federation of Labor submitted a memorandum to the federal government at Washington on February 5, recommending that the government should undertake a comprehensive program of recovery, and making the following suggestions: (1) The 30-hour week, establishment of which, it said, would take 6,600,000 out of the army of unemployed; (2) Expansion of the "self-liquidating" project loans by the Reconstruction Finance Corporation, which thus far, it was claimed, had afforded employment to a negligible number; (3) Passage of the bankruptcy bill, already approved by the House, which would enable debtors to readjust their obligations by agreements ratified in Federal courts; (4) A large Government public works program financed by issuance of long term bonds.

The Federation's survey of existing conditions declared that Labour Department figures show that 52.5 hours per week is the average now, while in many industries firms are working on a 60-hour week, and for some shifts even a 72 and 84-hour week.

## GENERAL REVIEW OF THE INDUSTRIAL SITUATION

## Employment

THE employment situation at the end of January was reported by the superintendent of the Employment Service of Canada to be as follows:—

Farming in the Province of Nova Scotia was quiet, although some farmers were busy cutting firewood and pit props, as well as clearing a right of way for the Hydro Transmission line. Very little fishing was being done. Lumbering, which had been discontinued due to lack of snow, showed slight improvement with a snowfall during the last week of the month. Small operators were cutting pit timber. Coal mines in the New Glasgow area, except for one which was idle, operated from two to five days per week, the majority of those in Cape Breton and vicinity working two days. Manufacturing on the whole was fair only, while some idleness prevailed in the iron and steel industry. Building construction was at a low ebb, but municipal street and sewer work continued, also work on the Citadel at Halifax, sponsored by the Department of National Defence. Railway traffic was light and great delays were experienced in marine traffic, owing to gales and storms. Wholesale trade was quiet, but retail was stimulated by clearance sales. Collections were slow. There was a continued demand for women domestic workers, and placements made accordingly.

Farmers in New Brunswick had received large orders for furnace wood, but were unable to make delivery in some cases on account of lack of snow in the woods. Logging was quiet. Heavy gales seriously interfered with the fishing industry, and resulted in loss of gear. Manufacturers of confectionery and foodstuffs reported business as usual. Spool wood manufacturing was busy, but foundry work was quiet at Chatham, with all departments closed. Little building construction was underway, and contracts on hand were nearing completion. Storms interfered with passenger and freight traffic, although specially good hauling conditions prevailed both on river ice and through rural district highways. Trade was fair, also placements, in the Women's Domestic Section.

There was no placement of farm help in the Province of Quebec during January, nor was there any change in the situation regarding bush operations, for logging companies were hiring few men. All manufacturing establishments reported little activity, with the exception of textiles, which were somewhat busy. Few orders were received for the

building trades, but the City of Montreal continued to employ a large number of men on sewer construction and unemployment relief work. As the holiday season was ended there was a decline in commercial activity. Vacancies in the Women's Domestic Section were fewer in number, and placements easily effected, for the number of applicants was large.

The call for farm help in Ontario was very small, with wages in most instances so low that only single men were eligible. There was little activity in logging, although there was a slight demand for hooksmen at North Bay, and tie makers, pulp and cordwood cutters and general bushmen at Fort William, Port Arthur, Sault Ste. Marie, Sudbury and Timmins. As many of the camps had their complement of men, it was expected that the call from now on would consist of men to be sent out as replacements only. Few workers were being taken on at the mines, and it was not expected that there would be much change in that respect until spring, when great activity was anticipated, due to the large number of claims staked, in which the larger mining companies were interested. There was little improvement in evidence in the manufacturing industries. The iron and steel group which had looked brighter at the beginning of the year, had not realized the increased activities indicated, and although a spirit of optimism prevailed at Oshawa, as men were called back in many departments of General Motors, other factories showed little change. Textiles were fairly busy, though in some instances were only operating at 80 per cent of their capacity. Very little building construction was underway, with the exception of small repair or alteration jobs. Relief camps on the Fort Frances-Kenora and Trans-Canada Highways continued filled to capacity. Sewer work, as a relief measure, was also provided by several municipalities. A shortage of experienced household workers was noted in the Women's Domestic Section, but plenty of applicants were at hand to fill all casual vacancies.

Little change was shown in farming in Manitoba, an accumulation of vacancies received under the Farm Relief Plan being noted in some offices. A nominal decline occurred in the number of men sent to bush work, while a few miners were sent out from Winnipeg to Wabowden. Manufacturing was quiet, and there was no improvement noted in building construction, while approximately the same number of men were directed to relief camps.

## MONTHLY STATISTICS REFLECTING INDUSTRIAL CONDITIONS IN CANADA

(Official statistics except where noted)

|   | 1933      | 1932          |               | 1932          | 1931          |               |

(8) MacLean's Building Review.

Retail trade was fair. A slight increase was noted in the Women's Section, both in registrations for work and the number of placements effected, fewer day workers being asked for, but more calls recorded for country employment.

Although many placements were made in farming in the Province of Saskatchewan, a large number of orders for farm help registered under the Farm Relief Scheme still remained unfilled, with suitable applicants in the minority. There was also no demand from the logging camps. A decrease likewise took place both in applications and placements in mining, with a reduction in staff expected to take place shortly at some of the bigger mines. There was no building construction in progress and few casual jobs offered. Concentration and National Park relief camps took care of single transients, who otherwise would be drifting from place to place looking for work. The Women's Domestic Section was exceptionally quiet, with a number of unfilled vacancies for farm domestics listed under the Farm Relief Plan, but for these it was difficult to obtain suitable workers.

The demand for farm help in the Province of Alberta was good, many of the farmers having availed themselves of the Government scheme, for which sufficient help was available. A little more activity was noticeable in logging, with a fair call for loggers and tie makers. Conditions were very quiet in mining at Drumheller and Medicine Hat, while at Edmonton the mines were fairly busy, but with little demand for men. Except for milling companies, all manufacturing industries were very quiet. There was no building or railroad construction, and outside of government and city relief placements, no work available. Wholesale trade was slow, with retail slightly improved. A surplus of applicants appeared for all vacancies listed in the Women's Domestic Section, a large number of unplaced applicants receiving direct relief.

The farm labour situation was very quiet in British Columbia, also logging. Sawmills likewise showed no improvement, the larger ones operating with reduced crews. Local coal mines at Nanaimo worked part time only. Elsewhere, hopes ran high for great developments in the coming season in gold mining, but no openings for miners were available at present. Manufacturing and trade were both very slack. No new work was opening up in construction, so that provincial and government relief work on roads was about the only employment which could be obtained, and where this was not available, the municipalities adopted the Government's direct

relief scheme. Waterfront workers were fairly busy at New Westminster and the drydock and shipyards at Prince Rupert but the waterfront at Vancouver re-mained quiet. Conditions remained unchanged in the Women's Domestic Section, with a large surplus of applicants on hand for all classes of employment.

#### EMPLOYERS' REPORTS.

The seasonal curtailment in employment registered at the beginning of January, 1933, was rather smaller than that reported on January 1, 1932, and was also less than the average loss indicated at the opening of the preceding years of the record. The Dominion Bureau of Statistics tabulated returns from 7,947 firms whose payrolls declined from 763,561 persons on December 1, to 721,308 at the beginning of January. Reflecting this contraction, the index (based upon the 1926 average as 100) stood at 78.5 on January 1, 1933, as compared with 83.2 in the preceding month and 91.6 on January 1, 1932. On the same date in the preceding eleven years, the index was as follows: 1931, 101.7; 1930, 111.2; 1929, 109.1; 1928, 100.7; 1927, 95.9; 1926, 90.7; 1925, 84.9; 1924, 89.8; 1923, 87.3; 1922, 78.8 and 1921, 88.8.

All provinces recorded declines, those in Quebec and Ontario being extensive. In the Maritime Provinces, the decrease took place chiefly in manufacturing and construction, but mining and trade were also slacker. On the other hand, transportation showed seasonal improvement with the opening of the winter ports. In Quebec, manufacturing, construction and transportation reported especially pronounced losses, but the trend was also unfavourable in mining, while improvement was noted in logging and retail trade. In Ontario, manufacturing, mining, construction and transportation registered the greatest losses, and there were smaller declines in services and communications. Retail trade and logging, on the other hand, recorded a slight advance. In the Prairie Provinces, construction reported the most noteworthy decrease, but manufacturing and transportation also showed important losses; in addition, mining, communications, services and wholesale trade were slacker, while logging indicated seasonally increased activity. In British Columbia, lumber, vegetable food, electric current and non-ferrous metal factories, logging and construction recorded decided curtailment, while there were small gains in transportation and coal mining.

There were contractions in seven of the eight cities for which separate tabulations are made, firms in Montreal, Quebec City, Toronto, Ottawa, Hamilton, Winnipeg and Van-

couver reporting reduced employment, while heightened activity was indicated in Windsor and the adjacent Border Cities as a result of increased employment in manufacturing, especially iron and steel. In Montreal, important declines were noted in transportation, construction and manufacturing, while retail trade was seasonally busier. In Quebec City, manufactures reported losses in employment, and construction and transportation were also slacker. In Toronto, there were contractions in manufacturing and also in construction and transportation, but retail trade reported considerable improvement. In Ottawa, manufactures and construction indicated seasonal curtailment, and trade also afforded less employment. In Hamilton, manufacturing and transportation showed reduced activity, while highway construction and services reported improvement. In Windsor and the adjacent Border Cities, manufacturing showed improvement chiefly in the automobile group. In Winnipeg, manufactures registered declines, but construction showed improvement. In Vancouver, employment in manufactures, construction and trade showed a falling-off since the preceding month, while other groups did not report much change.

An analysis of the returns by industries shows contractions in all groups except retail trade, the losses in manufacturing, construction and transportation being most noteworthy.

An article elsewhere in this issue gives in some detail the employment situation as at the beginning of January, 1933.

**TRADE UNION REPORTS.** Reflecting to a considerable extent the existing general depression, together with the seasonal curtailment of industry and the customary closing for holiday and inventory purposes at the end of the year in many lines of business, the percentage of idleness among local trade unions at the close of December, 1932, stood at 25.5, representing the peak for the year and also since the establishment of our records. This percentage for December was based on the reports furnished to the Department by 1,764 labour organizations embracing a total of 155,298 members, 39,607 of whom were without work on the last day of the month. Employment recessions were apparent from November when 22.8 per cent of the members reported were idle, and also from December, 1931, unemployment for the latter month standing at 21.1. Every province participated in the retrogressive employment movement shown from November, though the changes were not outstanding, Saskatchewan with a decline of 3.5 per cent from November show-

ing the greatest curtailment of activity, with declines of less than 1 per cent in Nova Scotia and Manitoba. Building and construction continued very quiet, conditions being especially dull in Ontario. Compared with the returns for December, 1931, Nova Scotia unions were the only ones to report a more favourable situation during the month reviewed, the coal mines of the province showing a better employment trend, though short time work was still much in evidence. Ontario unions, on the other hand, suffered severe losses in employment from December, 1931, and activity for New Brunswick and Alberta and British Columbia union members declined substantially.

On another page of this issue appears a more detailed article with tabular statements on unemployment at the close of December, 1932.

#### EMPLOYMENT OFFICE REPORTS

During the month of December, 1932, the offices of the Employment Service of Canada made 30,394 references of persons to positions and effected a total of 29,192 placements. The number of placements made in regular employment during the month was 14,290, of which 11,361 were of men and 2,929 of women workers. In casual work, the Offices placed 14,902 people. Employers notified the Service of 30,885 vacancies, of which 23,847 were for men and 7,038 for women. The number of registrations for work was 40,332 of men and 9,404 of women, a total of 49,736 applications. Compared with the preceding month, vacancies and placements showed gains and applications a decline, while in comparison with December a year ago, all three groups recorded losses, the records for November, 1932, showing 28,683 vacancies offered, 65,165 applications made and 27,383 placements effected, while in December, 1931, there were recorded 36,867 vacancies, 53,885 applications for work and 35,747 placements in regular and casual employment. A report in detail of the work of the Offices for the month of December, 1932, may be found elsewhere in this issue and on another page will be found a statement of the activities of the Offices for the last quarter of the same year.

#### BUILDING PERMITS AND CONTRACTS AWARDED

According to a report prepared by the Dominion Bureau of Statistics, the value of permits issued in 61 cities in Canada during December, 1932, was \$1,480,731, as compared with \$2,505,309 in the preceding month, and with \$7,895,106 in December, 1931.

The value of construction awards throughout the Dominion during January, 1933, is estimated by the *MacLean Building Review* at

\$3,362,400. Of this total, \$1,052,500 was for business buildings; \$1,036,000 was for engineering purposes; \$948,100 was for residential buildings, and \$325,800 was for industrial purposes. The apportionment of the contracts awarded during January by provinces was as follows: Quebec, \$1,522,500; Ontario, \$949,600; British Columbia, \$665,100; Nova Scotia, \$92,400; Alberta, \$50,600; Manitoba, \$39,700; New Brunswick, \$31,500; Saskatchewan, \$11,000.

### Production and Trade

#### INDUSTRIAL PRODUCTION

Figures showing the volume of production in certain industries during recent months and also in the corresponding

months last year are shown in the table on page 120.

The *Monthly Review of Business Statistics*, published by the Dominion Bureau of Statistics, states that "while business conditions in Canada reflected depression in 1932, constructive developments in the latter part of the year were suggestive of greater resistance to the prevailing trend of the last four years. The decline was practically general in the major economic factors during the first six months of the year, but a reversal in business psychology was manifested at midyear, resulting in a temporary advance. The index of the physical volume of business was 78.3 in July compared with 75.3 in April, the low point of the first half of the year. Despite the impetus of a heavy grain movement resulting from a wheat crop considerably greater than normal, the indicated rebound of business operations was counterbalanced by reaction toward the end of the year.

"The decline of productive operations in Canada during 1932 was not nearly so severe as in either of the two preceding years. The official index of the physical volume of business indicated considerable resistance against depressing influences especially after the first quarter. Despite the decline of the last four years, operations are still greater than in the primary post-war depression of 1921. The present level is similar to that of mid-year 1922. The lowest point in post-war history, reached in March, 1921, was 60.6 which compares with about 72.6 in December last."

**Coal.**—Coal production in Canada during December totalled 1,160,355 tons, a decline of 27.1 per cent from the 1927-1931 average for the month of 1,475,336 tons. The December output consisted of 669,746 tons of bituminous coal 61,590 tons of sub-bituminous coal and 429,019 tons of lignite coal.

Alberta's production amounted to 527,783 tons as compared with 509,432 tons a year ago. Nova Scotia mines produced 330,691 tons, a 12.6 per cent falling-off from the December,

1931, total of 378,435 tons. British Columbia's output in December declined 20.2 per cent to 152,905 tons as against 191,681 tons in the corresponding month of 1931. An increase of 14.5 per cent was recorded in Saskatchewan's production in December when 121,256 tons were produced as compared with 105,915 tons in December last year. New Brunswick mines produced 26,795 tons during December; a year ago the output was 20,028 tons.

Canada imported 893,636 tons of coal in December, a decrease of 30.6 per cent from the five-year average for the month of 1,286,753 tons. Imports of anthracite coal amounted to 219,278 tons, consisting of 140,506 tons from the United States, 70,792 tons from Great Britain, 7,280 tons from Germany, and 700 tons from the French East Indies. During the period May to December Canada's anthracite supply was obtained from the following sources: Great Britain, 53.44 per cent; the United States, 44.4 per cent; Germany, 2.13 per cent; and the French East Indies, 0.03 per cent. Bituminous coal importations in December were made up of 660,329 tons from the United States and 13,505 tons from Great Britain. Imports of lignite coal during December consisted of 524 tons shipped from the United States into British Columbia.

Canadian coal exported in December totalled 30,510 tons or 61 per cent below the December, 1927-1931, average of 78,326 tons. Nova Scotia New Brunswick, Quebec and Ontario ports cleared 21,515 tons and Manitoba, Saskatchewan, Alberta and British Columbia ports, 8,995 tons.

Coal made available for consumption in Canada during December totalled 2,023,481 tons, a decline of 24.6 per cent from the average for the month during the past five years of 2,683,763 tons. The December supply was made up of 219,278 tons of anthracite coal, 1,315,312 tons of bituminous coal, 61,590 tons of sub-bituminous coal and 427,301 tons of lignite coal.

#### EXTERNAL TRADE

A summary of Canadian trade in December, 1932, prepared by the Department of National Revenue, shows that the merchandise entering Canada for consumption amounted to \$28,961,212 as compared with \$37,769,047 in the preceding month and with \$40,289,795 in December, 1931. The chief imports in December, 1932, were non-metallic minerals and products, \$5,508,897; agricultural and vegetable products, mainly foods, \$4,421,176; fibres, textiles and textile products \$4,724,708.

The merchandise exported from Canada during December, 1932, amounted to \$42,615,796 as compared with \$45,944,520 in the preceding month and with \$53,255,476 in December, 1931.

The chief exports in December, 1932, were: Agricultural and vegetable products, mainly foods, \$18,943,215; wood, wood products and paper, \$9,184,658; animals and animal products, \$4,831,979.

### Strikes and Lockouts

The time loss due to industrial disputes during January showed a substantial decline from that recorded for the previous month. The number of strikes and lockouts recorded and the number of workers involved also showed a decrease, due chiefly to the termination in December of several strikes involving considerable numbers of coal miners in eastern and western Canada. As compared with January, 1932, similar decreases are recorded, strikes involving several hundred lumber workers in Ontario and British Columbia and several hundred fishermen on the Atlantic coast causing higher figures for January last year. There were in existence during the month eight disputes, involving 622 workers, and resulting in a time loss of 5,936 working days, as compared with eleven disputes, involving 2,854 workers and resulting in a time loss of 9,146 working days in December, 1932. In January, 1932, there were on record twelve disputes, involving 1,117 workers and resulting in a time loss of 8,280 working days. At the end of the current month there were no disputes recorded as strikes or lockouts in progress. These figures do not include those strikes and lockouts in which employment conditions were no longer affected but which had not been called off by the unions involved.

### Prices

The cost per week of a list of twenty-nine staple foods for an average family of five in terms of the average retail prices in sixty-nine cities was again lower at the beginning of January at \$6.94 as compared with \$7.04 for December, 1932; \$7.68 for January, 1932; \$9.86 for January, 1931; \$11.88 for January, 1930; \$11.30 for January, 1929; \$11.03 for January, 1922; \$16.92 for June, 1920 (the peak); and \$7.73 for January, 1914. The most important change was a substantial fall in the price of eggs, while the prices of mutton, pork, bacon, lard and flour were also lower. Prices of potatoes, shoulder roast beef, butter, evaporated apples and prunes were slightly higher. Including the cost of fuel and rent with that of foods the total budget averaged \$15.89 for January, as compared with \$16.01 for December, 1932; \$17.59 for January, 1932; \$20.21 for January, 1931; \$22.17 for January, 1930; \$21.55 for January, 1929; \$21.52 for January, 1922; \$26.92 for July, 1920 (the peak); and \$14.49 for January, 1914. Fuel was somewhat lower,

because of declines in the prices of bituminous coal and wood. A slight decrease in rent was reported from Vancouver.

In wholesale prices the index number calculated by the Dominion Bureau of Statistics, based upon prices in 1926 as 100, was slightly lower at 63.9 for January, as compared with 64.0 for December, 1932; 69.4 for January, 1932; 75.9 for January, 1931; 95.3 for January, 1930; 94.0 for January, 1929; 97.1 for January, 1922; 164.3 for May, 1920 (the peak); and 64.9 for January, 1914. In the classification according to chief component materials seven of the eight main groups were lower and one was higher. The groups which declined were: the Animals and their Products group, because of decreased prices for hogs, fresh and cured meats, lard and eggs, which more than offset higher prices for hides, steers, lambs and calves; the Fibres, Textiles and Textile Products group, due to lower prices for certain manufactured cottons, raw jute, hessian and raw silk; the Wood, Wood Products and Paper group, mainly owing to reduced quotations for lumber and wood pulp; the Iron and its Products group, due chiefly to lower prices for hot rolled and annealed steel sheets, cast iron pipe, scrap iron and steel; the Non-Ferrous Metals and their Products group, because of lower prices for electrolytic copper, lead, tin and zinc; the Non-Metallic Minerals and their Products group, due to lower prices for hollow building blocks, sulphur and quicklime, which more than offset advances in the prices of window glass, building stone and plaster; and the Chemicals and Allied Products group, because of lower quotations for zinc oxide and sodium bicarbonate. The Vegetables and Vegetable Products group advanced, higher prices for flax, oats, rye, wheat and flour influencing the index more than lower prices for corn, oatmeal, rolled oats, bran, shorts and coffee.

A report recently published by the United States Department of Agriculture states that 9.5 of the farms in the United States have been taken over by creditors during the past five years. The seizures included proceedings involving sales for taxes, mortgage foreclosures, and sales to avoid foreclosures. In addition to actual seizures there are stated to be numerous cases in which the farmer is unable to meet his obligations, but is allowed to remain on his farm as nominal owner because the holder of the mortgage is unwilling to take over the management of the farm. Governor Schedeman, of Wisconsin, issued a proclamation in January, calling on circuit judges in the State to hold back mortgage foreclosure proceedings until the legislature could enact measures for relief.

## PROCEEDINGS UNDER THE INDUSTRIAL DISPUTES INVESTIGATION ACT DURING THE MONTH OF JANUARY

**A** BOARD of Conciliation and Investigation under the provisions of the Industrial Disputes Investigation Act was established by the Minister of Labour during January to deal with a dispute between the Winnipeg Electric Company and certain of its employees being motormen, conductors and busmen, members of the Street Railway Employees' Unit of the One Big Union. The application was received in the Department during December (LABOUR GAZETTE, December, 1932, page 1290). The dispute related to a wage reduction which the Winnipeg Electric Company proposed putting into effect in the case of operators holding runs on certain routes of the Suburban Rapid Transit Company, operated by the Winnipeg Electric Company. The Board is composed as follows: the Honourable Mr. Justice A. K. Dysart, Winnipeg, Manitoba, chairman, appointed by the Minister of Labour in the absence of a joint recommendation from the other Board members; Messrs. Ernest T. Leech, K.C., and Allan Meikle, both of Winnipeg, nominated by the company and employees, respectively.

Reference was made in the November issue of the LABOUR GAZETTE (page 1153) to an application which had been received from Division No. 685, Amalgamated Association of Street and Electric Railway Employees of America, claiming that the Mohawk Coach Lines, Limited, which was operating a trial bus service

in the city of Brantford under agreement with the municipality and the Brantford Municipal Railway Commission, had reduced wages and made certain changes in working conditions in violation of an agreement in existence between the Brantford Municipal Railway Commission and its employees. As the applicants were not in the employ of the Mohawk Coach Lines, Limited, and no dispute existed between that company and its employees, a Board was not established on this application. It is understood that during January the bus service was discontinued and the street railway service, which had been suspended, resumed operation.

### Prosecutions under Section 60 of Act

Ten employees of the Tulameen Coal Mines, Limited, were charged in the Police Court at Princeton, B.C., on December 29, 1932, with having infringed the Industrial Disputes Investigation Act by going on strike contrary to its provisions. Information was laid by Mr. John Bennett, General Manager of the company. The hearing was adjourned until January 5, 1933. On January 2 the strike was terminated as a result of negotiations between the president of the company and the employees' representatives and, in accordance with the terms of the settlement, the charges of unlawfully striking placed against the ten coal miners were withdrawn.

## CANADIAN RAILWAY BOARD OF ADJUSTMENT No. 1

### Summary of recent Proceedings

**F**OUR new decisions were given recently by the Canadian Railway Board of Adjustment No. 1. Earlier decisions were outlined in the LABOUR GAZETTE, November, 1932, page 1162, and in previous issues; and the fourth report of the proceedings of the Board covering the period from October, 1927, to September 30, 1930, was issued as a supplement to the issue of December, 1930.

The Board was established under a voluntary agreement concluded in 1918 between the various railway companies and certain of the railway organizations, its original purpose being to secure uninterrupted service on the railways during the continuance of the war. The Board consists of six representatives of labour, one for each of the following railway brotherhoods; the Brotherhood of Locomotive Engineers; the Brotherhood of Locomotive Firemen and Enginemen; the Order of Railway

Conductors; the Brotherhood of Railway Trainmen; the Order of Railroad Telegraphers; and the Brotherhood of Maintenance of Way Employees and Railway Shop Labourers.

### Case No. 405.—Temiskaming and Northern Ontario Railway Commission and Order of Railway Conductors and Brotherhood of Railroad Trainmen

A question arose as to the methods of paying train crews in work-train service. The established practice on this railway is to pay round trips of over 100 miles in each direction as two separate days, the outward trip being considered as completed on arrival at the turning point. This practice applies to work-trains as well as to through-freight or extra passenger-trains: The trip in question was one of 142 miles each way, and the Railway paid for 284 miles, the actual run, but declined to allow the

employees claim for switching and loading, which was taken as equivalent to 28 miles. The employees contended that Rule 9 of the Schedule required the railway to pay for switching time, and cited the interpretation to Article G, which reads as follows:

"In through freight and extra passenger service, turn-around runs, more than 100 miles in each direction shall be paid as separate trips, outbound trip being considered as completed when train is registered at turning point. Switching at turn-around point to be considered as initial switching for return trip. Switching to be paid from time required to commence switching until train is coupled together for return movement. Delay, other than switching, to be considered as initial terminal delay. In all cases, time to be continuous from time required to report at terminal until relieved at terminal, except when rest is booked en route."

On the other hand, the Railway contended that time occupied by a work train in moving to and from a pit track, and loading at a pit (as in the present case) did not constitute terminal switching within the accepted meaning of the term, and that the correct basis of pay was miles run, *plus* overtime if any, calculated from the commencement of the day until tied up at the end of the day.

The Board found that the agreement governing the service of conductors and trainmen did not specifically provide for the working conditions to be effective in work train service, although it provided that the same rates of pay should apply in work train service as in through freight service. It further developed that in practice for many years work train service with a road haul of less than 100 miles in one direction had been paid for on a basis of time or mileage whichever was the greater, from the time of coming on duty until time of going off duty. The question at issue arose from a new situation which had developed, in which the road haul in one direction in work service exceeded 100 miles, or to be exact was 142 miles. The claim submitted was based it was held, on the fact that there was mutual understanding that in turn-around through freight service in which the road haul in direction exceeded 100 miles a new or separate day commenced at the time the train reached the turn-around point. This understanding, also applied in work-train service. It was admitted by the employees that switching time at initial point in work train service should be included in the day's work and be paid for as such, but it was claimed that when, as in the case at issue, a new day had commenced at the turn-around point and the road mileage on the return trip to the terminal or pit exceeds 100 miles, the day's work was completed when the train reached the terminal or pit, and that service which might then be required before the crew went off duty should be paid for under

the provisions of Rule 9 as in the case of through freight service.

"Inasmuch," the Board's decision concluded, "as any practice had not been established under the conditions mentioned, and the agreement did not provide for any special conditions applying to work train service under such circumstances, in the opinion of the Board, work train service being paid for at through freight rates, the conditions of this service was also applicable for service performed after reaching the tie-up point upon completion of trip over 100 miles in one direction".

The claim of the employees was sustained.

**Case No. 406.—Temiskaming and Northern Ontario Railway Commission and Order of Railway Conductors and Brotherhood of Railroad Trainmen**

A dispute arose as to the manner of compensating a conductor in work-train service, under the following circumstances. The conductor came on duty at 5 a.m. on July 23, 1932, and at 9.20 p.m., when the rest of the crew was released from duty, he was instructed to pilot the engine to the terminal for a washout. For this work he presented two tickets, one for the time between 5.00 a.m. to 9.20 p.m., being for 225 miles, and a separate ticket for 142 miles, being the actual miles run with the engine as pilot. The Railway paid for the service on the basis of continuous time from 5 a.m. until 2.35 a.m. the next morning (the time of the conductor's release at the terminal), with overtime on the basis of miles run in work-service plus miles run as pilot, the total mileage paid being 278.

The employees contended that the conductor had, by this method of payment, been deprived of the full amount of the overtime he had earned, and that the mileage and overtime made in work-train service should not have been combined with the mileage run as pilot. The Railway stated that the mileage and overtime in the case had been calculated on the total time the conductor had been on duty, and in support of their action, cited the decisions of the Board No. 116 (LABOUR GAZETTE, April, 1922, page 397) and No. 390 (July, 1932, page 760). In the former of these cases the Board decided that "pay to trainmen acting as pilots, or trainmen acting as conductors on engines running light, may be combined with other service to the same extent that pay for trainmen paid under through-freight conditions may be combined with other service."

In the present case the Board sustained the claim of the employees, noting that it differed from Cases No. 116 and 390 in the fact that neither of those cases involved a day, or 100 miles, for the actual pilot service.

**Case No. 407.—Temiskaming and Northern Ontario Railway Commission and Order of Railway Conductors and Brotherhood of Railroad Trainmen**

Four trains formerly operated each day between North Bay and Cochrane, six crews being assigned to them, on the "first in first out" principle. On July 12, 1932, two of these trains were run on three days only in each week, the change involving a reduction of approximately 6,600 train miles, and also a reduction in the number of crews from six to four, the railway advertising for four train crews to run the four trains. The employees protested against this arrangement, claiming that three crews should be assigned to the two trains which continued to run daily, and that two crews should be assigned to those running on alternate days. They claimed that while the new arrangement was in effect they were in "pooled service," and that they should therefore be paid for the time they were held at the away-from-home terminal in excess of sixteen hours. The Railway declined to alter the crew arrangements and also declined to pay for the time away from home as suggested by the employees.

The Board denied the claim of the employees, holding, (1) that the new arrangement of assigning crews was not in violation of Article D of the wage agreement as alleged; (2) that it was not improper to assign passenger crews to run out of different stations in the one terminal (namely North Bay, where two of the trains use the Canadian Pacific Station and two the Canadian National station); (3) that the one passenger crew kept out of regular service by the Railway's plan of pooling crews was not entitled to compensation as claimed; and (4) that assigned passenger train crews were not entitled, under Rules 27 and 49 to compensation for the time they were held at the away-from-home terminal. However, the Board found that under the new arrangements crews on some trips were required to be at the away-from-home terminal for longer periods than usual and suggested that the Railway and the employees should endeavour to reach a mutually satisfactory arrangement.

**Case No. 408.—Canadian National Railways (Atlantic Region) and Brotherhood of Railroad Trainmen**

During the summer of 1931 a baggageman was assigned to supervise the express matter that arrived at Cape Tormentine in the baggage car until such express reached Borden and was there handed over to the connecting baggageman. He was also required to accom-

pany the express and to maintain supervision on the return trip. For this additional service he was paid under the provision of Rule No. 12, relating to extra service.

A question arose as to the point where the extra services should begin and end under this rule. The Board ruled that it commenced at the time when the express car at Cape Tormentine leaves the station for the ferry dock, and continued until the returning express car arrived at Cape Tormentine Station from the ferry dock. The employees having asked for a ruling on the question how the conductor and brakeman on this run should be paid, the Board decided that these men should be paid on the basis of a minimum day with overtime allowance, if any, from the time they came on duty at Sackville until their return to that point. The baggageman should be paid on the same basis as the conductor and brakeman, except that he would be entitled to an extra allowance as above described. The Board found it to be an established practice for the railway companies to couple up the work of express messenger and baggageman on a number of light services.

The claims of the employees were sustained to the extent indicated in the foregoing rulings.

---

**Land Settlement in Quebec**

The Speech from the Throne at the opening of the Quebec Legislature on January 10 referred to the colonization work recently carried on in the Province as follows:—

"Notwithstanding the financial crisis, besides the considerable assistance which it has given to the unemployed, the Government has been generous to the agricultural class and to our colonists. Thousands of families have established themselves on new lands and are opening them for colonization. The grants in 1932, for the costs of clearing the land, of ploughing and of residence are beyond all precedents. Agricultural training, the sale of chemical fertilizers, the draining of the land and the fight against bovine tuberculosis have also been greatly encouraged and favoured. This great agricultural and colonizing policy can neither be abandoned nor even restricted. If our resources will permit it, the Government desires to give it still wider scope, without forgetting our fisheries, which also have been largely subsidized. Neither does the Government mean to neglect public education, hygiene and the protection of our forests."

## STRIKES AND LOCKOUTS IN CANADA DURING JANUARY, 1933

THE following table shows the number of disputes, workers involved and time loss for January, 1933, as compared with the previous month and the same month a year ago.

| Date           | Number of disputes | Number of employees involved | Time loss in working days |
|----------------|--------------------|------------------------------|---------------------------|
| *Jan. 1933.... | 8                  | 622                          | 5,936                     |
| Dec. 1932....  | 11                 | 2,854                        | 9,146                     |
| Jan. 1932....  | 12                 | 1,117                        | 8,280                     |

\* Preliminary figures.

The record of the Department includes lockouts as well as strikes, but a lockout, or an industrial condition which is undoubtedly a lockout, is rarely encountered. In the statistical table, therefore, strikes and lockouts are recorded together. A strike or lockout, included as such in the records of the Department, is a cessation of work involving six or more employees and lasting at least one working day. Disputes of less than one day's duration, and disputes involving less than six employees, are included in the published record only when ten days or more time loss is caused, but separate record of such disputes is maintained in the Department, and the figures are given in the annual review. Each month, however, any such disputes reported are mentioned in this article as "minor disputes."

The figures printed are inclusive of all disputes which come to the knowledge of the Department, and the methods taken to secure information practically preclude probability of omissions of a serious nature. Information as to a dispute involving a small number of employees, or for a short period of time, is frequently not received until some time after its commencement.

The number of strikes and lockouts recorded as having occurred in January is smaller than that for December, 1932, the number of workers involved and the time loss incurred also showing a decrease, due largely to the termination during December of several strikes involving coal miners in eastern and western Canada. As compared with January, 1932, a similar decline is shown, strikes involving several hundred lumber workers and several hundred fishermen having caused higher figures at that time.

Three disputes, involving approximately 230 workers, were carried over from December, two of the strikes recorded as unterminated in the January issue of the LABOUR GAZETTE having terminated by the end of December, as noted below. Five disputes commenced during January. All the eight disputes in progress during the month were recorded as terminated, three resulting in favour of the employers involved, one in favour of the workers concerned, three being partly successful, and the result of one being recorded as indefinite. At the end of January, therefore, there were no disputes in progress recorded as strikes or lockouts.

The record does not include minor disputes such as are defined in a previous paragraph,

nor does it include disputes as to which information has been received indicating that employment conditions are no longer affected but which the unions concerned have not declared terminated. Information is available as to nine such disputes, namely: photo engravers, Toronto, Ont., commencing on March 23, 1931, one employer; photo engravers, Toronto and London, Ont., Montreal and Quebec, P.Q., and Winnipeg, Man., May 4, 1931, one employer; compositors, Regina, Sask., November 21, 1931, one employer; motion picture projectionists, Winnipeg, Man., February 27, 1932, one employer; motion picture projectionists, Toronto, Ont., July 11, 1932, two employers; shoe factory workers, Montreal, P.Q., December 9, 1932, one employer; lithographers, Toronto, Ont., April 15, 1932, one employer; men's clothing factory workers, Montreal, P.Q., January 3, 1933, one employer; and women's clothing factory workers, Montreal, P.Q., January 4, 1933, one employer, the last three being added this month.

Information has been recently received as to a dispute commencing in July, 1932, involving twenty-three cutters, tailors, etc., employed in one establishment manufacturing men's clothing in Toronto, Ont. On July 19, 1932, members of the Amalgamated Clothing Workers of America employed by this firm ceased work against a ten per cent reduction in wages and to secure union recognition. Negotiations between the parties resulted in an agreement for a reduction of eight per cent, and work was resumed on September 12.

Information has also recently been received in the Department as to a dispute commencing in October, 1932, when some fifty Chinese workers employed in one shingle mill ceased work on October 6, 1932, protesting that an increase in wages granted the Chinese crew was less than that received by the other workers. Negotiations between the parties resulted in a resumption of work on October 8 under conditions satisfactory to the strikers.

A cessation of work by one hundred and ten pulpwood cutters near Long Lac, Ont., on December 21, 1932, was reported to the Department too late for inclusion in the January issue of the LABOUR GAZETTE. Reports received since indicate that the strike was called by the Lumber Workers' Industrial Union of Canada to enforce a demand for an increase in piece rates from \$1.50 per cord to \$1.50-\$1.80 per cord. Negotiations between the parties resulted in the resumption of work on December 24, 1932, at a rate of \$1.50-\$1.75 per cord.

The following paragraphs give particulars regarding certain disputes in addition to the information in the tabular statement.

**PULPWOOD CUTTERS, THREE NATIONS AND HOYLE, ONT.**—As a result of negotiations between the employers and employees a settlement of this dispute was effected and work was resumed on January 24, 1933, the employers agreeing to raise the rate per cord from \$1.25 to \$1.40, the rate for board being reduced from \$1 per day to 75 cents, and the day rate of wages was increased from \$1 to \$1.50, with board. The employees in the

five camps affected had demanded a rate of \$1.50 per cord. The strikers had been replaced to some extent by new employees, and it is reported that one of the terms of settlement was that these were to be discharged within ten days.

**COAL MINERS, PRINCETON, B.C.**—In this dispute, which commenced on November 30, 1932, following a demand for a ten per cent increase in wages (a restoration to rates as at March 31, 1932), and certain changes in working conditions, no settlement had been reached by the end of January, 1933, in one of

\* In this table the date of commencement is that on which time loss first occurred, and the date of termination is the last day on which working time was lost to an appreciable extent.

the two collieries involved; the dispute in the other colliery had been terminated at the middle of December. The mine still involved, however, had been closed at the end of December, and early in January no further attempts for a settlement being made, it appeared that the mine was closed for the balance of the winter season, and therefore the dispute is recorded as lapsed. During the month a union leader arrested early in December, 1932, on a charge of membership in an unlawful association, and held without bail, was released until the date of trial on \$10,000 bail.

**COAL MINERS, ALEXO, ALTA.**—Although reported as unterminated in the January issue of the *LABOUR GAZETTE*, no time loss in connection with this dispute is recorded for January, information having been received later as to the termination of the dispute on December 31, 1932. The fifty coal miners involved, who had ceased work on December 17, 1932, demanding an increase in wages and improved working conditions, on December 31 agreed to call the strike off, returning to work on January 3, 1933, under the same wages and conditions as prior to the dispute.

**WOMEN'S CLOTHING FACTORY WORKERS, MONTREAL, P.Q.**—This dispute, which commenced on October 15, 1932, when forty-five pressers, operators and finishers in one establishment ceased work against the dismissal of union workers and for recognition of the Industrial Union of Needle Trades Workers, was called off by the union on January 7, 1933, the employees returning to work under the same conditions as prior to the strike.

**LITHOGRAPHERS, TORONTO, ONT.**—This dispute, which commenced on April 15, 1932, against a reduction in wages, was shown as unterminated in the January issue of the *LABOUR GAZETTE*, but information having been received indicating that the employer had replaced the eight workers involved, no time loss has been shown for the month of January. The dispute, therefore, is recorded as terminated and has been transferred to the list, in a previous paragraph, of disputes where, although employment conditions are no longer affected, the unions concerned have not yet declared the dispute terminated.

**COAL MINERS, RIVER HEBERT, N.S.**—Demanding equal division of work in two collieries operated by one company, 225 coal miners ceased work on January 5, 1933. The employer stated there was a much greater demand for coal produced by one of the collieries than for that of the other. The Provincial Deputy Minister of Mines arranged meetings with the parties involved, attended by the Acting Premier of Nova Scotia and the mem-

ber of Parliament for Cumberland. The employer undertook to develop a new section of one mine, affording employment for workers from the other mine. The union officials, therefore, called off the strike and work was resumed on January 14.

**COAL MINERS, EAST COULEE, B.C.**—On January 7, 1933, one hundred and twenty-five coal miners employed by one company ceased work in protest against the non-payment of wages due. Following an investigation by the Chief Mines Inspector for the province, arrangements were made for payment and work was resumed on Monday, January 16, 1933.

**MEN'S AND BOYS' CLOTHING FACTORY WORKERS, MONTREAL, P.Q.**—On January 3, 1933, some thirty employees, members of the United Clothing Workers of Canada, ceased work in protest against the employment of members of the Amalgamated Clothing Workers of America, in violation of the terms of settlement of a strike during the summer of 1932, prior to which the latter union had an agreement with this and other employers. The strikers were replaced by members of the Amalgamated Clothing Workers. The dispute is, therefore, recorded as terminated, but is transferred to the list of those not called off by the union involved although employment conditions are no longer affected. A statement as to this dispute in the January issue of the *LABOUR GAZETTE*, based on preliminary reports, indicated that the employees in this establishment ceased work in December, 1932.

**WOMEN'S AND CHILDREN'S CLOTHING FACTORY WORKERS, MONTREAL, P.Q.**—Four members of the Montreal Dress Cutters' Union employed in one establishment in Montreal with a total staff of 170, on January 4, 1933, were called out on strike by the union against a wage reduction. The union picketed the establishment but the employer replaced the strikers, and the dispute is recorded as terminated by January 9, 1933, but included among those not called off by the union although employment conditions are no longer affected.

**CARPENTERS, TORONTO, ONT.**—Eight carpenters employed by one firm ceased work on January 6, 1933, in protest against a reduction in wages from 90 cents to 75 cents per hour. The agreement between the United Brotherhood of Carpenters and Joiners of America and the contractor's association had terminated at the end of the year. This agreement provided for a wage rate of 90 cents per hour and the employers proposed a reduction to 75 cents. One of these put this

rate into force and the employees, members of the United Brotherhood of Carpenters and Joiners of America and also of the Amalgamated Carpenters of Canada, ceased work

pending a settlement. Negotiations resulted in the signing of a new agreement providing for a rate of 80 cents per hour, and work was resumed on January 24, 1933.

## RECENT STRIKES AND LOCKOUTS IN GREAT BRITAIN AND OTHER COUNTRIES

THE latest available information is to strikes and lockouts in various countries is given in the LABOUR GAZETTE from month to month. The annual review containing a table summarizing the principal statistics as to strikes and lockouts in other countries is on page 152 of this issue. Information as to particular disputes is obtained for the most part from newspaper reports.

### Great Britain

Preliminary figures for 1932 show the number of disputes beginning in the year as 384. The number of workers involved in all disputes in progress during the year was 381,600 and the time loss for the year 6,488,000 working days. The disputes in the cotton spinning and weaving industry in Lancashire and Yorkshire (a report of which is given on page 152 of this issue) accounted for about 90 per cent of the total time loss for the year.

Of the 384 disputes beginning in the year, 21 were for increases in wages, 129 against proposed reductions in wages, 76 on other wages questions, 10 related to working hours, 87 to the employment of particular classes or persons, 44 on other questions of working arrangements and 14 on questions of trade union principle. In addition there were 3 sympathetic strikes.

The accompanying table gives a classification of the disputes by industries for 1932.

The number of disputes beginning in December was 13 and 8 were in progress from the previous month, making a total of 21 disputes in progress during the month involving 5,200 workers, and resulting in a time loss of 57,000 working days for the month. Of the 13 disputes beginning in December, 4 were over wages questions, 6 over questions respecting the employment of particular classes or persons and 3 on other questions. Settlements were reached in 12 disputes, of which one was settled in favour of workers, 3 in favour of employers, and 8 ended in compromises. In the case of one other dispute work was resumed pending negotiations.

A strike involving 13,000 men in the bus service of the London area lasted three days from January 21 to January 24. This strike which was against speeding up the service was not sanctioned by the union and was called off January 23, work being resumed the next day.

A strike of 5,000 railway workers in Northern Ireland, except in Belfast and County Down, began January 31 against a wage reduction of 6 per cent, and seriously affected other industries. Up to February 9 no settlement had been made.

### INDUSTRIAL DISPUTES IN GREAT BRITAIN AND NORTHERN IRELAND DURING 1932

| Industry Group                          | Number of disputes beginning in 1932 | Number of work-people involved in all disputes in progress | Aggregate duration in working days of all disputes in progress |
|---|--------------------------------------|--|--|
| Fishing and Agriculture...              | 5                                    | 2,200  | 49,000   |
| Coal Mining.....                        | 111                                  | 52,600   | 287,000  |

| Commerce, Distribution and Finance..... | 8                                    | 400  | 11,000   |
| Other.....                              |                                      |  |  |
| Total.....                              | 384                                  | 381,600  | 6,488,000  |

### United States

The number of disputes beginning in November was 23 and 33 were still in effect at the end of the month. The number of workers involved in disputes in effect at the end of the month was 4,066 and the time loss for the month 106,135 working days.

A strike of 6,000 employees of a company manufacturing automobile bodies at Detroit began January 23. This strike is reported to have indirectly affected 40,000 workers in automobile manufacturing plants in the Detroit area and 60,000 in other centres. The demands of the strikers were for recognition of employees' committees, higher wages, a 45 hour week and other demands. The company conceded a minimum basic rate of pay, and between January 31 and February 8, 5,000 workers including strikers and others had returned to work at the body plants.

## STRIKES AND LOCKOUTS IN CANADA AND IN OTHER COUNTRIES DURING 1932

THE number of strikes and lockouts in Canada during 1932, as well as the number of workers involved and the time loss, was considerably greater than during 1931, owing chiefly to an increase in the number and importance of disputes involving coal miners, in some cases for relatively long periods of time. Disputes as to division of the work available and complaints of discrimination against certain employees or classes of employees were the chief causes of many of the stoppages in coal mines.

The accompanying table of disputes from 1901 to 1932, inclusive, giving figures as to coal mining separately, in comparison with disputes in other industries, indicates that

throughout this period the time loss in coal mining has been a large percentage of the total and in twelve out of the thirty-two years has accounted for approximately one-half or more of the total. In the six years prior to 1932, however, the time loss in coal mining disputes has been comparatively small. In 1932, while the number of disputes in coal mining, thirty-three, was greater than in any year except 1918 and 1920, most of the disputes were of brief duration and involved small numbers of miners. Most of the time loss was caused by four disputes in Alberta and two in Nova Scotia.

In industries other than coal mining the time loss in 1932 was substantially less than in

TABLE I.—STRIKES AND LOCKOUTS IN CANADA BY YEARS, 1901-1932

| Year       | All Industries               |                       |                     |                            |                               | Coal Mining                                 |                            |                               | Industries other than Coal Mining           |                            |                               |

\* In these totals figures for disputes extending over the end of a year are counted more than once.

1931 although there were nearly twice as many employees involved, with a slight increase in the number of disputes. As in 1931, most of the disputes were of brief duration and involved relatively small numbers of workers. Logging, salmon fishing, fur and clothing manufacturing, and saw milling were the industries chiefly affected.

Two of the most important disputes during the year involved coal miners at Blairmore and Bellevue, Alta., the latter in sympathy with the former, 300 and 330 miners respectively being involved, from February to September and resulting in time losses of 31,800 and 34,650 working days. Other important disputes occurring during the year involved 1,800 salmon fishermen at Port Essington, B.C., for a period of three weeks, causing a time loss of 25,000 working days, and 1,400 salmon fishermen at Rivers Inlet, B.C., for one week with a resulting time loss of 4,500 working days. Coal miners in two mines at Coleman, Alta., numbering 325 and 330 workers respectively, were out on strike, the latter in sympathy with the former, from the middle of March to May 26, causing time losses of 17,500 and 18,000 working days. In Montreal, 3,000 men's clothing factory workers were on strike for two weeks during August with a resulting time loss of 25,000 working days, while 800 fur factory workers at Toronto, Ont., were on strike for five weeks causing a time loss of 12,000 working days.

A number of disputes are reported from time to time involving men on unemployment relief work, receiving subsistence for which some work is performed or may be required. As no relation of employer and employee is involved these are not included in the record.

### Compilation of Statistics

Since its establishment toward the end of 1900 the Department of Labour has maintained a record of strikes and lockouts in Canada, publishing in the *LABOUR GAZETTE* each month a complete list of those in progress, so far as available, with particulars as to the nature and result of each dispute. Early in each year a review of the previous year has been given, including statistical tables analyzing the data, and since 1912 including a complete list of the disputes on record during the year. As the monthly statements in the *LABOUR GAZETTE* are necessarily of a preliminary nature the annual review constitutes the revised record for the year. A special report on "Strikes and Lockouts in Canada 1901 to 1912," issued in 1913, contained a complete list of strikes and lockouts for that period with analytical tables. The annual reviews in the *LABOUR GAZETTE* have brought the lists of

disputes and analytical tables down to date each year.

The annual review for 1930 appearing in the *LABOUR GAZETTE*, February, 1931, included summary tables back to 1901, the result of a revision of the record on the basis of the classification of industries adopted by the Dominion Bureau of Statistics and other government departments for official statistics. This classification had been used for strikes and lockouts since 1921, and it was advisable to have the record for earlier years on the same basis. Other revisions to secure uniformity throughout the whole period were also made.

The record of the Department includes lockouts as well as strikes, but a lockout, or an industrial condition which is undoubtedly a lockout, is rarely encountered. In the statistical tables, therefore, strikes and lockouts are recorded together, the term dispute being used with reference to either.

A strike or lockout included as such in the records of the Department, is a cessation of work involving six or more employees and lasting one working day or more. Disputes of less than one day's duration and disputes involving less than six employees have not been included in the published record unless a time loss of 10 days or more is caused. A separate record of such disputes involving less than 10 days' time loss is maintained in the Department. Although not included in the statistical record, such disputes are mentioned in the *LABOUR GAZETTE* at the time of their occurrence. During 1932 there were eleven such disputes, involving 147 employees, making a time loss of 60 working days.

The figures in this report are inclusive of all disputes which come to the knowledge of the Department, and the methods taken to secure information practically preclude probability of omissions of a serious nature. As to duration of strikes, numbers of employees concerned, etc., it is impossible always to secure exact information, but the estimate made in such cases is the result of painstaking methods in the collection of data, and, with increasing experience in dealing with the subject it is believed that the statistics indicate the conditions with reasonable precision. The estimate of time loss is reached by multiplying the number of working days during which each strike lasted by the number of employees involved in the dispute from time to time so far as known. The number of employees recorded for each dispute is the number of those directly affected, that is on strike or locked out, and does not include those indirectly affected. In recent years, when the information is available, the number indirectly involved has been shown in footnotes.

RESULTS OF STRIKES AND LOCKOUTS ACCORDING TO NUMBERS OF  
EMPLOYEES INVOLVED EACH YEAR 1901-1932

NUMBER OF  
EMPLOYEES

LOSS IN WORKING DAYS THROUGH STRIKES AND LOCKOUTS BY GROUPS  
OF INDUSTRIES EACH YEAR 1901-1932

The record does not include minor disputes as described in a previous paragraph, nor does it include disputes as to which information has been received indicating that employment conditions are no longer affected, although the unions or organizations concerned have not yet declared them terminated. Information is available as to the following disputes of this nature carried over from 1931: motion picture projectionists, Ottawa, Ont., commencing February 23, 1931, lapsed during December, 1932; photo engravers, Toronto, Ont., March 24, 1931; photo engravers, Toronto and London, Ont., Montreal and Quebec, P.Q., and Winnipeg, Man., May 4, 1931; motion picture projectionists, Montreal, P.Q., August 27, 1931, lapsed during June, 1932, sawmill workers, Barnet, B.C., September 23, 1931, lapsed during May, 1932; cooks and waiters, Edmonton, Alta., September 29, 1931, lapsed during August, 1932. Also during 1932, the following disputes included in Table X and recorded as terminated were added to this list: compositors, Regina, Sask., Nov. 21, 1931; lumber workers, Campbell River, B.C., December 3, 1931, lapsed during May, 1932; compositors, Saskatoon, Sask., December 14, 1931, lapsed during July, 1932; motion picture projectionists, Winnipeg, Man., February 27, 1932; motion picture projectionists, Toronto, Ont., July 11, 1932; women's clothing factory workers, Montreal, P.Q., August 1, 1932, lapsed during November, 1932; motion picture projectionists, Saskatoon, Sask., August 27, 1932, lapsed during December, 1932; and shoe factory workers, Montreal, P.Q., December 9, 1932.

### Charts

The accompanying chart of the time loss in working days by groups of industries for each year back to 1901, shows that in mining considerable time loss occurred in 1909, 1910, 1911 and 1913, and again in 1917, 1922, 1924 and 1925, while in 1932, an increase over the previous six years appears. In 1919 the time loss due to general strikes is shown separately.

In metal manufacturing considerable time loss appeared in 1919 and 1920. In construction considerable time loss appeared only in 1912 and 1919. In transportation there was considerable time loss only in 1901, due to a strike of trackmen; in 1903 due to a strike of railway clerks and freight handlers throughout western Canada, and a strike of longshoremen at Montreal, with a sympathetic strike of teamsters; and in 1908, due to a strike of railway shop machinists. There also occurred considerable time loss in clothing, textiles, boots, furs, etc., in 1903, 1908, 1912, 1914, 1917, 1919, 1925 and 1926, with an appreciable amount in 1930, 1931 and 1932. The time loss in other

manufacturing industries was large in 1901, due to a lockout of cigarmakers at Montreal; and in 1921, 1922, 1923 and 1924, due to the prolonged disputes of job printers to secure the forty-four hour week. In 1931 and 1932 a number of disputes in sawmills caused appreciable time loss.

From the chart showing results of the disputes it appears that the majority of employees were successful or partially successful in 1901, 1902, 1907, 1915, 1916, 1917, 1918, 1926, 1930, 1931 and 1932, but were unsuccessful in 1908, 1921 and 1923. In 1919, a large percentage of the workers who were unsuccessful were involved in the general strike at Winnipeg and in general strikes in other localities in sympathy with it.

### Review of Disputes by Industries, 1932

**LOGGING.**—The eleven disputes in this industry, two of which were carried over from December, 1931, were caused by demands for increases in wages and in some cases reductions in the rates charged for board. In these the workers were mostly unsuccessful, being replaced or returning to work without securing their demands. Eight of the disputes occurred in Northern Ontario and three in British Columbia. The strike involving the greatest number of workers, six hundred, occurred in the Nipigon district, Ont., where the workers were successful in securing an increase in wages after one day. The greatest time loss also occurred in the same locality in a previous dispute involving 225 workers, who were replaced after a time loss of 4,000 working days, when they sought an increase in wages, reduction in board and improved working conditions.

**FISHING AND TRAPPING.**—The two disputes in this industry involved large numbers of salmon fishermen in British Columbia, demanding higher rates per fish, the canning companies having offered lower rates than in 1931. In each case the fishermen were partly successful, securing a somewhat higher rate or some improvement in conditions.

**MINING.**—All the disputes in this group during the year were in coal mining, chiefly in Alberta and Nova Scotia. Most of these were of short duration and involved comparatively few miners. The causes of the principal disputes were demands for equal division of work, the dismissal of miners and check weighmen, and changes in conditions of work for long-wall miners. There were also three sympathetic strikes.

The most important strikes during the year were at Blairmore and Bellevue, Alta., where 300 and 330 workers, respectively, employed by one company were on strike from February to September against the discharge of a miner for

insubordination, although there was also involved a question as to discrimination against certain miners and equal division of work. The Premier of Alberta mediated and arranged a compromise settlement, resulting in a two-year agreement with a committee of employees providing for the same wages and working conditions as before, but without the check-off for union dues. The Premier's undertaking to provide unemployment relief for those miners not re-employed also facilitated the settlement. During the strike there were several clashes between the strikers and the police, followed by arrests on charges of destruction to property, assault, etc. A total of twenty-one persons were convicted and released on suspended sentences of two years, while one was sentenced to three months in jail. In June a conference had failed to bring about a settlement as the employing company refused re-employment to twenty-five men at each mine who had been active in promoting the strike. The resulting time losses were 31,800 working days at Blairmore and 34,650 at Bellevue.

At Coleman, Alta., 275 coal miners employed by one company secured a compromise settlement after being on strike one day near the end of January to secure an equal division of work, fifty miners being indirectly affected. In February the whole 325 again ceased work as the division of work was still unsatisfactory, and the following day 330 miners employed by another company at Coleman went out in sympathy with them. After a week they all returned to work without securing further changes. Again, about the middle of March, the miners of both these companies ceased work for the same reason, remaining out until May 26 with a time loss of over 35,000 working days, returning without securing their demands.

At Sydney Mines, N.S., 700 coal miners in one colliery ceased work on three occasions during the year over working conditions for longwall miners. In the first strike they secured their demands through negotiations after one day; in the second strike they returned to work pending a settlement after being on strike one day; while in the third dispute the provincial Department of Mines conciliated and arranged a compromise settlement after the miners had been out for eleven working days.

Two strikes against the removal of miners' check-weighmen occurred during the year. One at Bienfait, Sask., involved seventy miners who were replaced, the other, at Little Bras d'Or, N.S., involved 215 miners. The latter were successful after being out more than two months when the provincial Deputy Minister of Mines conciliated. The time loss in this dispute exceeded 8,000 working days. At Springhill, N.S., 1,233 miners ceased work for a day

to secure the dismissal of a miner who had been expelled from the union. This miner left, apparently of his own accord.

Two strikes occurred at Princeton, B.C., toward the end of the year. The first one, commencing at the end of November, involved 200 miners employed by two companies to secure the restoration of a scale of wages previously in force, union recognition and other changes. In one mine the strikers were successful on December 17, but in the other the dispute was unterminated at the end of the year. On December 26, workers in the mine where a settlement had been reached again ceased work against the dismissal of four workers, including the president of the union, for refusing to work Christmas Eve. After a week their demands were conceded.

The other disputes in this industry involved small numbers of workers and were of short duration.

**MANUFACTURING.**—Most of the disputes in this group occurred in fur, clothing and wood manufacturing establishments. There were five disputes among fur factory workers at Toronto, Ont., including a strike of 800 workers in several establishments for nearly six weeks against a reduction in wages. The workers were successful in this after a time loss of 12,000 working days.

In clothing manufacturing there were two strikes of importance in Montreal. The first involved most of the establishments in the women's cloak and suit industry, on the expiration of the agreement between the International Ladies' Garment Workers' Union and the employers' association. The latter had proposed a ten per cent reduction in wages and refused to renew certain clauses in the agreement with reference to employment of union members, involving the "closed shop." In three days, through conciliation of the Department of Labour representative, a settlement was reached providing for the renewal of the agreement but with the ten per cent wage reduction.

The other dispute resulted from the organization of a new union among employees in the factories manufacturing men's and boys' clothing, the United Clothing Workers of Canada, which demanded recognition. Most of the factories affected had been for many years operated under agreements with the Amalgamated Clothing Workers of America, but many of its members joined the new organization. After securing recognition in a number of factories, in some cases as a result of strikes, the new union declared a strike on August 4 against the other factories and in two weeks

secured its demands in most of the establishments but without signed agreements. Later in the year in a number of factories the workers returned to the Amalgamated Clothing Workers of America, and the members of the new union ceased work to compel the employers to dismiss these. The strikers, however, were replaced, the employers again recognizing the other union.

The other disputes in clothing factories did not involve large numbers of workers nor were they of long duration, being chiefly due to alleged violations of agreements, changes in wages, reduction in staff instead of dividing available work, etc.

Nine of the twelve disputes in the "Other Wood Products" group involved shingle or lumber mill workers in British Columbia and were principally over questions of wages, either to secure an increase or against a decrease, apparently reflecting the depressed condition of the industry. The numbers involved in these were comparatively small and the disputes were of short duration so that the resulting time loss was not great.

The only other dispute of considerable importance in manufacturing involved 273 workers directly, and 300 indirectly, in a rubber factory in Toronto, Ont., for three weeks against the introduction of an efficiency system alleged to have lowered earnings. A compromise settlement was arranged through direct negotiations, the new system to be tried out and amended. The time loss of both those directly and indirectly affected amounted to nearly 10,000 working days.

**CONSTRUCTION.**—The seven disputes recorded under "Building and Structures" were all against reductions in wages or to maintain the union rates. None involved large numbers of workers, and in most cases the workers were partially successful. Two strikes of sewer construction labourers at Verdun, P.Q., employed on sewer construction as municipal unemployment relief work accounted for a large percentage of the number of strikers and the time loss in construction for the year, as 700 labourers were out four and one-half days with a resulting time loss of 3,000 working days in the first dispute, while 250 workers were out for one-half day in the second. In the former the workers were successful in securing an increase in wages from 30 cents per hour to 40 cents, while in the latter they failed to secure more hours of work per week.

**SERVICE.**—In this group there were three disputes involving motion picture projectionists in various localities. In each case the cause was the refusal of the workers to agree to a

proposal of the employer to reduce wages and the number of operators in a theatre. The workers were unsuccessful in two cases, being replaced, but were successful in the other. A general strike of Jewish barbers in Toronto lasted for a day and one-half. The cause was a decrease in wages but the workers secured a compromise settlement.

### Analysis of Statistics, 1932

Table I is a summary of the principal statistics for the period for which the record has been compiled beginning in 1901. The table shows the number of disputes beginning in each year and the number in existence during the year, the difference in each case being the number of disputes carried over the end of the previous calendar year. A small number of disputes have been carried over at the end of every year except 1903 and 1929. The approximate number of employers involved in all industries as well as the number of workers involved and the time loss, is given. In addition to these data, the number of disputes in existence during each year in coal mining and in industries other than coal mining is given, along with the number of workers involved and the time loss. A study of the latter figures reveals that a few disputes in coal mining in most years account for a large proportion of the workers involved and for a still larger proportion of the time loss resulting.

Table II gives an analysis by number of workers involved during 1932 and shows that five disputes involved 8,933 workers or 38.2 per cent of the total for the year and resulted in 22.8 per cent of the time loss; that 42.3 per cent of the disputes involved but 5.1 per cent of the workers and resulted in but 6.6 per cent of the time loss; that thirty-five disputes, or 30.2 per cent of the total number, involved between 100 and 500 workers in each and caused 58.2 per cent of the time loss.

Table III gives an analysis by time loss in man working days and shows that seven disputes, or six per cent involving 29.4 per cent of the workers, caused 64.3 per cent of the time loss for the year, while fifty per cent of the disputes, having under 500 working days time loss in each case, caused but 3.7 per cent of the time loss; that twenty-eight disputes had between 1,000 and 10,000 working days time loss, and that there were no disputes during the year resulting in 50,000 or more working days' time loss.

Table IV gives an analysis by duration, that is the number of working days each dispute was in progress, and shows that eighteen dis-

putes, involving 3,025 workers, lasted 25 days and over, and caused more than one-half the time loss incurred during the year; that eight disputes, involving 817 workers, were untermi- nated or carried over from 1931; and that forty-five disputes, involving 9,699 workers or 41.5 per cent, lasted less than five days and resulted in but 6.3 per cent of the total time loss for the year.

Table V gives an analysis by provinces and shows that over twenty-five per cent of the disputes, namely thirty-one, involving 14.8 per cent of the workers and causing 13.3 per cent of the total time loss, occurred in Ontario; that the next largest number of disputes occurred in Quebec, where twenty-five disputes involving 29.8 per cent of the workers (due mainly to a strike of 3,000 men's cloth- ing factory workers in Montreal) resulted in 18.6 per cent of the time loss; that the great- est time loss for the year, 43.8 per cent of the total, most of which was due to four coal mining strikes, occurred in Alberta; that Nova Scotia with only eleven disputes during the year had the second largest number of work- ers involved in disputes, although the result- ing time loss was only seven per cent of the total; that British Columbia had eighteen dis- putes or 15.5 per cent, involving 18.8 per cent of the workers, resulting in 15 per cent of the time loss; that Manitoba had but three disputes involving only 77 workers, while New Brunswick, Prince Edward Island and the Yukon were without strikes during the year. No disputes of an interprovincial nature occurred.

Table VI gives an analysis by industries and shows that 46.5 per cent of the disputes were in manufacturing, 28.5 per cent in min- ing, 9.5 per cent in logging, 8.6 per cent in construction and 5.2 per cent in service; that there were two disputes in fishing and no dis- putes during the year in transportation and public utilities; also, that over one-half of the time loss occurred in mining while 36.5 and 37.7 per cent of the workers involved were in mining and manufacturing respectively, while within the latter industry the group "Textiles, Clothing, etc.," accounted for most of the disputes, workers and time loss, being second to "Mining" in this respect.

Table VII gives an analysis by causes and results. It shows that thirty-one disputes were against a decrease in wages and nineteen for an increase in wages; that thirteen were to secure or to maintain union wages and work- ing conditions and seven were to secure union recognition; that fifteen were due to other

causes affecting wages and working conditions; that ten were against the discharge of work- ers and five were sympathetic strikes. In re- spect to results it appears that 8,350 workers, engaged in thirty-four disputes, were suc- cessful; that 4,703 workers in fifty disputes were unsuccessful; while 9,176 workers in twenty-six disputes were partially successful or secured compromises. Six disputes involving 1,161 workers are shown as untermi- nated or having an indefinite ending. Three of these were untermi- nated: one terminated pending negotiations, one was in sympathy with an unemployed workers' demonstration, and in the other the plant was closed.

Table VIII gives an analysis by industries and methods of settlement with respect to the number of disputes and workers involved. It shows that fifty-three disputes involving 13,649 workers were settled by direct negotiations; that fifteen disputes involving 3,556 workers were settled by conciliation, usually of the Department of Labour or provincial officials; that twenty-two disputes involving 4,812 work- ers were settled by the workers' return with- out negotiations; and that in twenty-two dis- putes involving 972 employees, these were replaced either in whole or to an extent suf- ficient to operate the establishment. Four dis- putes involving 401 workers were untermi- nated or the method of settlement was in- definite, three being untermi- nated while in the fourth the plant was closed down.

Table IX gives an analysis by months for the past eleven years, giving the number of disputes commencing during each month, as well as the number of disputes in existence, and the number of workers involved each month, both in new disputes and in all dis- putes in progress, with the total time loss by months. This table shows that the greatest number of disputes during a year generally occurs in May and that the greatest time loss generally occurs in July. The years 1930 and 1931 were exceptions, however, in that the greatest number of disputes commenced in September and the largest time loss occurred in February in 1930 and in October in 1931, closely followed by March, September and November. The year 1932 was an exception in that the greatest number of disputes commenced in July, the second greatest number in February, and a large number during the last three months of the year. Most of the time loss, however, occurred during May, June, July and August, as in other years.

Table X gives a list of strikes and lockouts occurring during the year, with certain details as to causes, results, etc.

TABLE II.—STRIKES AND LOCKOUTS, 1932, BY NUMBER OF WORKERS INVOLVED

| Number of workers involved | Disputes |                   | Number involved |                   | Time loss        |                   |
|----------------------------|----------|-------------------|-----------------|-------------------|------------------|-------------------|
|                            | Number   | Per cent of total | Workers         | Per cent of total | Man-working days | Per cent of total |
| 1,000 and over.....        | 5        | 4.3               | 8,933           | 38.2              | 58,233           | 22.8              |
| 500 and under 1,000.....   | 7        | 6.0               | 4,900           | 20.9              | 21,550           | 8.5               |
| 100 and under 500.....     | 35       | 30.2              | 7,061           | 30.2              | 148,560          | 58.2              |
| 50 and under 100.....      | 20       | 17.2              | 1,298           | 5.6               | 9,828            | 3.9               |
| 10 and under 50.....       | 41       | 35.4              | 1,153           | 4.9               | 15,386           | 6.0               |
| Under 10.....              | 8        | 6.9               | 45              | 0.2               | 1,443            | 0.6               |
| Total.....                 | 116      | 100.0             | 23,390          | 100.0             | 255,000          | 100.0             |

TABLE III.—STRIKES AND LOCKOUTS, 1932, BY TIME LOSS

| Number of man-working days lost | Disputes |                   | Number involved |                   | Time loss        |                   |
|---------------------------------|----------|-------------------|-----------------|-------------------|------------------|-------------------|
|                                 | Number   | Per cent of total | Workers         | Per cent of total | Man-working days | Per cent of total |
| 50,000 and over.....            | 7        | 6.0               | 6,885           | 29.4              | 163,950          | 64.3              |
| 10,000 and under 50,000.....    | 28       | 24.2              | 8,647           | 37.0              | 66,561           | 26.1              |
| 1,000 and under 10,000.....     | 23       | 19.8              | 4,711           | 20.2              | 15,027           | 5.9               |
| 500 and under 1,000.....        | 32       | 27.6              | 2,228           | 9.5               | 8,244            | 3.2               |
| 100 and under 500.....          | 26       | 22.4              | 919             | 3.9               | 1,218            | 0.5               |
| Total.....                      | 116      | 100.0             | 23,390          | 100.0             | 255,000          | 100.0             |

TABLE IV.—STRIKES AND LOCKOUTS, 1932, BY DURATION

| Period of duration in working days                    | Disputes |                   | Number involved |                   | Time loss        |                   |

## Strikes and Lockouts in Other Countries during 1932

The accompanying table gives the principal figures as to strikes and lockouts in other countries since 1919, as compared with Canada, showing the number of disputes (strikes and lockouts), the number of employees involved in stoppages of work and the time loss in man working days in those countries for which such figures are available.

In some of these countries, figures as to strikes and lockouts are published separately, but in the table here given they have been included together. The practice varies greatly in the various countries also in regard to other points. In some cases the number of strikes and lockouts shown for a year is the number beginning during the year, in other cases it is the number ending during the year, and in still other cases it is the number in existence during the year, including those carried over from the previous year with those beginning during the year.

The figures as to the number of employees involved published by some countries show not only the number of employees directly involved, but also the number of those indirectly involved, that is thrown out of work by disputes to which they are not parties; but exact information as to these points is not always given. In the table given herewith the column showing numbers of employees involved includes figures for the numbers directly involved, or the total number directly and indirectly involved according to the method adopted by the country in question.

For some countries, figures as to time loss, that is, the number of "man-working-days" lost, are not given.

Footnotes to the table indicate the nature of the statistics with reference to the above points. Many countries publish these statistics only once each year or less frequently, the figures being issued in some cases after an interval of some length.

The following notes give information as to the more important disputes in each country in the year 1932.

### Great Britain

Disputes in the cotton manufacturing industry in 1932 accounted for nearly 90 per cent of the total time loss for all industries in Great Britain.

In the weaving section of this industry in Lancashire, a strike lasting two weeks and involving 4,000 workers occurred at Burnley in February over the introduction of the "more looms per weaver" system which was then temporarily abandoned. Later, in June, the general wages and hours agreement for Lancashire was terminated after notice from

the employers and wage reductions were made in different mills which resulted in a number of strikes; the principal one at Burnley involving 22,000 workers began July 25. Negotiations for a new general agreement for this section of the industry were unsuccessful, due chiefly to a disagreement over the re-employment of all strikers, and a general stoppage of work began August 27, involving 145,000 workers in Lancashire and parts of Yorkshire. A settlement was reached September 27 through conciliation by the Ministry of Labour and an agreement was signed providing for re-employment of strikers and reductions in wages of about 8½ per cent (which is a compromise in the wage rates proposed by each party), and provision for the "more looms per weaver" system to be further negotiated. Following these further negotiations, an agreement was signed January 2, 1933, covering certain types of cloth which provides for the six looms per weaver system instead of four looms per weaver which was previously worked.

In the spinning section of this industry in Lancashire, the general agreement was terminated December 31, 1931, but with few exceptions no changes were made until notices of wage reductions were given in August. Joint negotiations were unsuccessful until, in October, through the mediation of the Ministry of Labour, an agreement was reached between representatives of the parties providing for a wage reduction of 7.67 per cent in wages. This was later rejected by the union and there was a stoppage of work involving 130,000 workers between October 31 and November 5, when the unions decided to ratify the agreement previously reached and work was resumed November 7.

### Belgium

A strike of coal miners began in the Mons district about the end of June and later extended to other coal fields to put an end to reductions in wages and to secure better division of work. The dispute lasted until September 7, when an agreement was reached through conciliation by the Minister of Labour providing for a small increase in wages with provision for committees to consider the wages question and the rotation of work. This dispute involved in all about 130,000 coal miners and also 36,000 workers in other industries who took part in short sympathetic strikes in July.

### Czechoslovakia

In the northwestern Bohemian and in the Moravian Ostrau coal fields, strikes involving 30,000 coal miners began on and after March 23 against the dismissal of large num-

bers of miners and reductions in wages. Settlements were reached in the Moravian Ostrau district at the end of March providing for the withdrawal of the dismissal notices but for decreases in wages of from 4 to 12 per cent. In the northwestern Bohemian district a similar settlement was made April 19 through negotiations between the two parties with the assistance of Government officials.

### Denmark

About 4,000 employees of bacon factories were involved in a lockout from April 29 to May 11, when work was resumed with a reduction in wages of approximately 3 per cent.

### France

Several thousand workers in the wool textile industry at Vienne, Isère, were on strike from March 1 to April 22, when a settlement was made with a wage reduction of about 7 per cent.

### Germany

An order of the Federal Government was issued in September which permitted employers to reduce wage rates as the number of their employees was increased or in order to keep their establishments in operation, notwithstanding existing industrial agreements. A number of strikes occurred in protest against this in September and October. In some cases these strikes resulted in the postponement of the reductions. In December, a new Government repealed this order except for special cases.

### Netherlands

A strike in the textile industry of the Twente district was in progress from December 14, 1931, to April 4, 1932, when work was resumed under the wage reductions proposed by employers, although they agreed to postpone the reductions for several weeks.

### Poland

Following the findings of an arbitration committee which provided for a reduction in wages of 8 per cent, a strike in the Dombrowa and Cracow coal fields involving between 20,000 and 40,000 men lasted from February 18 to March 17 when it was called off, the reduction in wages having been accepted by the miners.

### Sweden

When negotiations before the State Conciliation Commission failed, employers in the paper-pulp industry proposed to reduce piece rate wages by 12 per cent and time rate wages by 6 per cent and a strike affecting 3,500 work-

ers began February 23. Later, other employers closed down their establishments involving a further 5,500 workers and by April 11 the dispute became general when the union called out another 5,000 workers, making a total of 14,000 workers involved. On July 5, an agreement was reached based on the proposals of the State Conciliator and work resumed with a reduction in wages of 7 per cent, and, except where specially provided in local agreements, a discontinuance of free housing and free wood.

### United States

After the expiration of a number of wage agreements in the bituminous coal fields of West Virginia, Ohio, Indiana and Illinois on March 31, when no further agreements were reached, work was discontinued at the mines affected in Illinois and Indiana, and in Ohio and West Virginia the miners came out on strike April 1. The total number of miners in these disputes was variously reported as between 20,000 and 100,000. In Illinois, agreements were reached in July with some employers and in October with others reducing the basic wage from \$6.10 to \$5 per day. In September an agreement was reached in Indiana providing for a wage reduction of 25 per cent, and in Ohio for a basic wage rate of \$3.28 per day. Disorders continued to occur throughout the year at mines where agreements had not been reached and the situation was further complicated in some fields by dissension between rival unions.

During March, a two weeks' strike of anthracite coal miners in Pennsylvania occurred in certain mines and involved about 12,000 workers. The demand was for equal distribution of work but the strike was called off April 1.

A dispute affecting 30,000 workers in the building trades in New York City was in progress from May 1 to June 16, when a settlement was reached providing for a reduction in wages of approximately 15 per cent, a compromise between the wage rates demanded by each party.

When they failed to reach a new agreement with employers after the expiration of their agreement at the end of 1931, about 25,000 ladies' garment workers in the dressmaking section of the industry in New York City went on strike on February 16. On March 4, a two-year agreement was signed with only minor changes from the previous one.

A strike of 20,000 men's clothing workers in New York City was in effect from August 4 to August 8 when through the conciliation of the Department of Labour an agreement was signed.

## STRIKES AND LOCKOUTS IN CANADA AND OTHER COUNTRIES, 1919-1932

| Year                  | Number of disputes | Employees involved | Time loss in working days | Year           | Number of disputes | Employees involved | Time loss in working days |

(a) Disputes beginning in period. (b) Disputes ending in period. (c) Disputes in existence in period. (d) Method of counting disputes not stated. (e) Directly involved only. (f) Directly and indirectly involved. (g) It is not stated whether or not employees indirectly involved are included. (h) Preliminary figures. (k) Excluding agricultural strikes. (l) In disputes for which reported. (m) Statistics, are more complete from June, 1927. (n) Exclusive of general strike of April, 1920. (o) Strikes only. (p) Since 1923, strikes have been illegal and none have been officially reported.

In Italy sickness insurance is, in theory, compulsory only for seamen and airmen and workers in the new provinces; but the Legislative Decree of May 6, 1928, regulating collective labour agreements lays down that such agreements will not be approved or published unless they contain definite provision for the protection of workers in case of sickness. As a result, mutual sickness insurance funds have been set up in accordance with the principles laid down in the Labour Charter. Their establishment was based on agreements concluded, with the assistance of the Minister of Corporation, between the employers' and workers' organizations.

The final Report of the California State Unemployment Commission to the Governor and Legislature recommends the following emergency measures: a five-day week and six-hour day on all public works, whether executed directly by the State or by contract; a five-day working week in the conduct of all State business, so far as is practicable, in order that employment may be given to as many employees as possible, it being made the duty of the head of each department, subject to the approval of the Governor, to arrange and assign the work of his department, within the budget limitation, so that employees may work not more than five days in each calendar week.

## COMBINES INVESTIGATION ACT

### Manufacturers of Fruit Baskets Plead Guilty to Combine Charges

**P**LEAS of guilty were entered at Hamilton before Mr. Justice Logie on January 26 by fifteen principal representatives of the fruit basket industry, charged with offences under the Combines Investigation Act and Section 498 of the Criminal Code. Fines of \$100 were imposed on each. The fifteen persons sentenced were members of the following ten firms manufacturing baskets and other containers for fresh fruits and vegetables:

The Oakville Basket Company, Limited, Oakville.

Merritt Brothers, Grimsby.

Canada Wood Products Company, St. Thomas.

Glover Basket Company, Limited, Burlington.

H. H. Farrell and Sons, Limited, Grimsby.

The Forest Basket Company, Limited, Forest.

A Hewson and Son, Grimsby.

Beamsville Basket and Veneer Company, Limited, Beamsville.

The Minesing Basket Company, Minesing.

Gull River Lumber Company, Limited, Lindsay.

Each of the accused was indicted under nine counts, five of which were laid under the Combines Investigation Act and four under the Criminal Code, Section 498. The charges in the indictment related to the fixing of common prices, the enhancing of prices and the lessening of competition by agreements among manufacturers of fruit and vegetable baskets, berry boxes, meat baskets and other containers and related products. The price agreements of members of the combine were enforced mainly by the operation of a sales quota plan under an organization known as the Canadian Basket Pool, consisting of twelve firms manufacturing baskets in Ontario and supplying the greater part of the Canadian output of these products.

The prosecution of the combine followed an investigation under the Combines Investigation Act completed early in 1932. George W. Ballard, K.C., County Crown Attorney at Hamilton, conducted the prosecution, assisted by H. F. Hazell, Hamilton. Mr. J. M. Bullen of Toronto appeared as counsel for the accused. A true bill against fifteen individuals, and five basket companies of which certain of these individuals were members, was returned by a grand jury at Hamilton on January 21.

The case, which was expected to involve a lengthy trial, ended suddenly without trial when the fifteen accused appeared before Mr. Justice Logie at the Assizes at Hamilton on January 26, pleaded guilty to two counts under the Act and two counts under the Criminal

Code, and were fined immediately. The remaining charges were dropped by the Crown. The four counts admitted by the accused members dealt with combining to prevent or lessen competition and to enhance prices unreasonably and against the public interest.

The twelve firms which were members of the Canadian Basket Pool sold over 95 per cent of the fruit and vegetable baskets produced in Ontario, with practically no competition from outside the province. Total sales coming under the regulation of the Pool amounted to approximately one million dollars a year. The Basket Pool commenced to operate in 1930 and discontinued in 1932 to await the outcome of the investigation under the Combines Investigation Act and the subsequent prosecution.

### Investigation into Alleged Combine of Distributors of British Anthracite Coal

Hearings in the investigation of an alleged combine in the importation and distribution of Welsh and Scotch anthracite coal were held throughout December and January. The opening of the inquiry was reported in the December LABOUR GAZETTE, page 1258. Up to the end of January some twenty-two witnesses had been examined at Montreal in twenty-one days of hearings. Evidence was taken for four days at the city of Quebec in January, where eighteen witnesses were heard, and on January 31 hearings in Toronto were commenced. The investigation is being conducted by the Registrar of the Combines Investigation Act. No public sessions were held in December or January, all witnesses being examined in private in accordance with the normal method of procedure laid down by the Combines Investigation Act. It was expected that the taking of evidence would be completed in February.

The value of Canada's mineral production in 1932 is estimated at \$182,701,000 as compared with \$228,029,018 in 1931, according to a report just issued by the Mining, Metallurgical and Chemical Branch of the Dominion Bureau of Statistics at Ottawa, Canada. Metals as a group totalled \$103,133,000 as compared with \$118,524,439 in 1931; non-metals including coal, natural gas, petroleum, asbestos, gypsum, salt, magnesite, sodium sulphate and many minor minerals were valued at \$56,779,000 as against \$65,346,284, a drop of 13 per cent from the previous year; and owing to the decrease in construction work throughout the Dominion during the past year the value of the output of clay products, cement, lime, stone and sand and gravel totalled \$22,789,000 as compared with \$44,158,295 during 1931.

## OLD AGE PENSIONS IN CANADA

### Financial Summary of Administration During Fourth Quarter of 1932 and Since Inception of the System

THE accompanying table gives particulars of operations under the Old Age Pensions Act (Revised Statutes of Canada, 1927, chapter 156; as amended by statutes of 1931, chapter 42) and the various provincial concurrent Acts, during the fourth quarter of 1932, and since these Acts became severally effective. Similar information bringing the statistics down to September 30, 1932, was given in the LABOUR GAZETTE, November, 1932. The text of the Old Age Pensions Act was given in the issue for April, 1927, page 375. The Act made provision for the establish-

ment of a Dominion-Provincial pension system to be effective in such provinces as might enact and give effect to special legislation for this purpose. The provinces now participating in Old Age Pensions are British Columbia, Alberta, Saskatchewan, Manitoba, and Ontario. The Northwest Territories are also within the scheme. The New Brunswick legislature passed an Old Age Pensions Act at its session in 1930, to become effective on its proclamation by the Lieutenant Governor in Council; while in Nova Scotia and Prince Edward Island Acts providing for

| Total amount of pensions paid by Province since inception of Old Age Pensions Act to December 31, 1932                         | \$2,668,408 72             | \$5,859,898 82              | \$5,898,572 08              | \$25,729,215 37            | \$5,560,110 81            | \$4,784 23                          | \$45,720,990 03 |
| Dominion Government's share of expenditure.....  | \$1,638,508 12             | \$3,375,691 22              | \$3,454,572 40              | \$15,480,623 93            | \$3,294,935 27            | \$4,784 23                          | \$27,249,115 17 |

\*These percentages are based on the figures of the Decennial Census, 1931.

the participation of these provinces in any federal scheme were passed at the session of 1931, both these Acts to take effect on proclamation.

Under the Old Age Pensions Act a pension is payable to any British subject of 70 years and upwards who is not in receipt of an income of as much as \$365 a year and who has resided in Canada for the 20 years preceding, and has also resided in the province in which the application is made for the five years immediately preceding the granting of the pension. The maximum amount of pension payable under the Act is \$240 yearly. In cases where pensioners have a private income the amount of their old age pension is subject to a reduction by the amount, if any, that their private income exceeds \$125 a year; and in cases where a pensioner has during part of the twenty years immediately preceding the date of the proposed commencement of pension resided in a province where the Act is not in force, the pension payable is reduced by the same proportion as the duration of the pensioners residence in these provinces bears to twenty years. The administration of old

age pensions is entrusted to the authorities appointed by the respective provincial governments.

Under the provisions of the Act as it was first passed the Department of Labour of Canada paid quarterly to each province one-half of the total amount of the pensions paid by the provincial pension authority during the preceding three months. At the 1931 session of the Dominion Parliament, however, the Act was amended, the amount of the Dominion contribution being increased from fifty per cent to seventy-five per cent of the total expenditure. Accordingly new agreements between the Dominion and Provincial Governments under the provisions of the amending Act were completed recently, as stated in the *LABOUR GAZETTE*, May, 1932, page 517. That issue also contained the text of the Old Age Pensions regulations, as recently revised. Arrears resulting from the increase of the Dominion contribution were paid to the provinces back to November 1, 1931; and the payments by the Dominion for the current year are on the basis of 75 per cent of the total expenditure on old age pensions.

### Conditions in the Nursing Profession in United States

The Committee on the Grading of Nursing Schools, a body appointed by medical, nursing and public health organizations in the United States, recently published a report giving the results of a recent investigation into the position of the nursing profession. The committee found that conditions were as follows:—

The supply of active graduate nurses in the United States is increasing far more rapidly than the general population.

There is serious unemployment among nurses. This unemployment grows worse yearly.

Yet there are shortages of nurses in some fields. (a) Geographic distribution is uneven. Nurses tend to live in cities and avoid the country. They are apt to be found near good hospitals, and not apt to be found in regions where hospital facilities are lacking. (b) There is a scarcity of nurses properly prepared for nursing in certain specialties—as mental, contagious, heart, obstetrics, etc. (c) There is a shortage of nurses who have had systematic preparation for executive and teaching positions in institutional or public health nursing.

Earnings of nurses are low. They are lower in private duty than in either of the other two main fields. In private duty there is practically no opportunity for professional advancement or increased pay.

Physicians want intelligent nurses. They prefer graduate nurses to practical nurses

They prefer well trained nurses to poorly trained nurses.

Educational standards in nursing are rising, but educational standards in the community are rising much more rapidly. If nursing is to attract women of the so-called professional type, it must set its educational standards high enough so that it can compete for students with the other professions now open to women.

The *Canadian Textile Journal*, in its issue of January 13, notes that "organization for control of credits and management of bankruptcies in the clothing and dress trades has been a notable feature of the past year. The latest branch of the industry to effect such an organization is the clothing trade, so that now all the important branches of the textile converting industry have developed effective credit organization. . . . *Canadian Textile Journal* has advocated the establishment of a central credit organization supported by the entire textile industry, and still believes that this is the ultimate, practical way of dealing with the situation. However, real progress is usually a slow process, and the present organizations will do much of preliminary work which in the end may be merged into one national textile credit association."

## QUEBEC SOCIAL INSURANCE COMMISSION

### Reports No. 5, Old Age Insurance; No. 6, Unemployment Insurance; and No. 7, Sickness and Disability Insurance.

THE Quebec Social Insurance Commission recently completed the work assigned to them by the publication of three reports dealing respectively with insurance for old age, unemployment, and sickness and disability. The third and fourth reports, on family allowances, and industrial hygiene respectively, were reviewed in the *LABOUR GAZETTE*, August, 1932, page 861. The second report (*LABOUR GAZETTE*, February, 1932, page 171) dealt with the subjects of child protection and mother's allowances, while the first report briefly stated the problems to be considered by the Commission.

The members of the Commission were as follows:—Mr. Edouard Montpetit, chairman; the Right Reverend Mgr. Georges Courchesne, Bishop of Rimouski; the Ven. Archdeacon F. G. Scott, Quebec; Mr. John T. Foster, President, Montreal Trades and Labour Council; Mr. Gerard Tremblay, Deputy Minister of Labour, Province of Quebec, and secretary-general of the National Catholic Syndicates; Dr. A. Lessard, director of the Provincial Bureau of Health; and Mr. Georges A. Savoy, president of the Quebec Division of the Canadian Manufacturers' Association.

### Fifth Report—Old Age Insurance

The report opens with a reference to the changing social conditions in the province, due to the spread of industrialism and to the beginnings of direct assistance by the state with the enactment of the Public Charities Act in 1921. The policy of the province of Quebec, unlike that of other countries, has been, not itself to care for the poor, but to assist those who are capable of so doing. Thus, in the year 1930-31, forty-five recognized institutions caring for the aged, received 2,418 needy persons, and the sum of \$217,371 was paid jointly by the government and the municipalities to aid in the work of ministration.

The Commission declares early in their report that they are "decidedly in favour of instituting, in the Province of Quebec, a system of old age insurance, which is contributory and obligatory. Reasons of justice and of logic, a desire to awake the conscience, the sense of responsibility, the love of independence, the habit of thrift among our people—all this has helped to create this conviction on the part of the Commission."

The report reviews the old age insurance systems existing in other countries, noting that "a considerable majority of countries which have achieved a high stage of social structure have preferred the insurance system rather than charity when it is a question of providing the aged with a suitable protection." Special attention is given to the insurance systems in effect in Great Britain, Germany, France, Belgium, and certain states in the American Union.

The Canadian old age pension legislation of 1927 is next reviewed, the Commission pointing out that that Act is not an insurance, but a charity law. The Commission, on the other hand, state their preference for a con-

tributory and obligatory insurance system. Under present conditions, with Quebec not participating in the Dominion system of old age pensions, it is considered extremely important that the province should take its share in attempting to perfect a system that would be inherently sound, the existing system being "admittedly a transition measure." The Commission, therefore, holding firmly to the idea of a system of insurance rather than a system of state charity, would regard with favour, though undoubtedly as a transitory measure, the adoption by the province of Quebec of the Federal law of 1927.

The report next puts forward suggestions towards the adaptation of the Dominion system, so as to conform with the special requirements of the Province of Quebec. The methods followed by the *Caisse Nationale d'Economie* since the establishment of that organization in 1899, are mentioned with approval: "The society is a mutual benefit society, paying no dividend either to shareholders or other institutions. Every person may acquire an income from the fund by subscribing annually the sum of \$4.50. The annual contribution may be increased five, ten, twenty-five or fifty times, resulting in a proportionate increase in the pension. On the death of the participant the payment of all sums contributed is made to the heirs, whether the death may occur before or after the age when payments cease, i.e., sixty-five years. At the beginning, the society made only individual contracts, later husband and wife contracts, until the system accepted family contracts, including the whole family, without regard to the number of beneficiaries. This form results in group insurance."

"The regulations of the *Caisse Nationale d'Economie*," the report states "include not only the payment of an annuity from the age of sixty-five, but also the repayment in full, at the death of the participant, of all the capital paid to insure this income. As a matter of fact this income is not large, due to the possibility of this repayment of capital. We should be inclined to favour the abandonment of this life insurance, except where death should take place before the age of sixty-five, in order to begin at the age of sixty the payment of the annuity, and to increase to a marked degree the amount of the latter."

The Commission next make a plea for further consideration of the needs of the rural population, the tendency everywhere being to confine assistance to needy persons in industrial centres.

The main report concludes with the following recommendations:—

### Recommendations

"Having studied the legislation of different countries dealing with protection for old age, and having examined many opinions expressed before it, the Social Insurance Commission declares itself in favour of a contributory and obligatory system of old-age insurance in preference to the system of charity now in force which, in the opinion of the Commission, may lead to many abuses. The Commission recommends therefore that the Province of Quebec should take the initiative in encouraging the other provinces to make a joint request to the Federal Government with a view to promoting and establishing an obligatory and contributory system of old-age insurance.

However, while heartily in favour, as a social measure, of the contributory and obligatory system of old-age insurance rather than a system of charity under the absolute control of the public authorities, and while awaiting the establishment of the system which it recommends, the Social Insurance Commission, in view of the disadvantageous situation in which our people are now found due to the fact that they contribute to the upkeep of a system from which they do not benefit, recommends that the Province of Quebec should at the earliest possible opportunity, accept as a temporary and transitory measure the establishment here of the system of old-age pensions now sanctioned by the federal law."

### Proposed Contributory Scheme

The report puts forward the following scheme of contributory insurance to serve as a basis for future discussion:

(a) Extent of Insurance.—Those having the right to share in the scheme will include all wage-earners with a maximum salary, to be determined, up to the age of sixty, who have contributed to the fund. This maximum income might be lowered in the case of wage earners living in towns with a population of less than 20,000. The wage-earner of sixty years of age may have a privilege of postponing the payment of this pension to the age of sixty-five.

(b) Financing.—In the case of wage-earners in industry and commerce, the employer and the employee will each be required to pay half the monthly premium, the employer deducting the contribution of the employee from the wages of the latter and being held responsible for its payment.

In the case of the farmer who is both employer and employee, and who can establish his right to insurance, the state should assume the share of the employer, contributing a proportion to be determined.

(c) Beneficiaries.—The policy holder of the transition period following the establishment of the system might receive, as payment of this insurance, an annual income in proportion to the number of years during which he shall have paid premiums. However, this income should not in any instance be less than the minimum sum which would guarantee at the time the subsistence of the beneficiary, the state to complete the income where necessary.

(d) Operation.—Societies whose task it is to guarantee income might be the organizations on which the state would rely for the operation of the insurance system if, as the Commission favours, the organization is established in the province of Quebec. If, as a result of the responsibility assumed by the central authority, which is the author of the legislation now in force, the system is federal in character, the operation could be entrusted to the federal organizations now functioning.

### Minority Report

A minority report, signed by Dr. Lessard and Mr. Savoy, suggests that if proposed provincial effort to secure the modification of the Federal system should be without result, the Province should organize for its own people a system of contributory old-age insurance. Further attention is directed also to "the disadvantageous situation in which our people find themselves at the present time owing to the fact that they contribute to a system from which they derive no benefit," the recommendation being made "that the Federal Government should pay to the Province of Quebec a grant equal to the amount which

the province would receive, if it were decided to take part in the federal system at present in force. An equitable basis might be arrived at by comparing the population of our province with the total population of the provinces at present sharing in the system. The amount thus received might serve to subsidize a contributory system of insurance and to meet

the expenses of assistance to the aged in distress who are too old to share in the insurance scheme."

Mr. Gerard Tremblay refrained from signing the report on the ground that, having been appointed Deputy Minister of Labour, he should remain neutral.

## Sixth Report—Unemployment Insurance

This report discusses unemployment and its causes, and the various remedies that have been applied, including that of insurance, concluding with a recommendation for the appointment of a Canadian Economic Council which would direct production, regulate working hours, and establish unemployment insurance on a contributory basis. At the outset, the Commission point out that unemployment is an artificial evil, capable in a large measure of cure, and even more of prevention; whereas sickness, disability, old age and death contain the element of necessity. "The intelligence and willingness of nations to eradicate these causes as much as possible might render unemployment insurance of benefit. If this insurance (in an obligatory form) has been applied in nine countries, the reason is that these evils have not been efficiently attacked at the proper time in order to render them harmless or mitigate them to a sufficient degree. What makes it difficult to subscribe without reservation to the principle of unemployment insurance is that by so doing we admit that the nation is incapable, by normal means, of organizing its social, economic and financial life, in such a way that its citizens may all have a real opportunity of earning their living and providing for their family in the normal way, i.e. by working."

### Causes of Unemployment

Among the causes of unemployment the Commission enumerate those of a moral character, such as the desire for gain, the race for quick profits, unbridled speculation, etc. In this connection it is suggested that legislation might well secure the public against unsafe enterprises.

Another cause is the excessive individualism, natural to a new country, which has made the task of regulating the whole economy a difficult one. It is extremely important, the report states, to develop a co-operative sense of responsibility—"The State is faced with the duty of developing the legal framework of this organization of society which is truly correct because it is natural. Such an organization may be helped, controlled and pro-

tected by the state against possible abuses while allowing it the necessary freedom."

The direct source of unemployment, however, is sought in "an accumulation of disturbing economic causes, a general lack of economic equilibrium." Some of these economic causes are stated, as follows:—(1) over-production; (2) abuses of credit; (3) commercial difficulties, including transformations of industrial economy; various hindrances to commerce, fiscal, financial, etc., international debts; lack of harmony in the various factors of economic activity, producers, labour, capital, and consumers; lack of adequate control over mechanical devices, which should under the State, be controlled by employers' industrial syndicates in the interest of industry and the common welfare; employment of women in spheres formerly occupied by men.

### Some Remedies

Following their belief that the causes of unemployment should be met as far as possible before the subject of unemployment insurance is approached, the Commission next discuss remedial measures. These include:

(1) *Public Works* (These should be works of an economically productive nature);

(2) *Reduction of working hours* (In this is found "one of the great possibilities of finding a permanent remedy for unemployment");

(3) *Sharing of Work* ("a highly efficient method of reducing unemployment," the application of which "would facilitate the final acceptance of a progressive legal reduction of working hours.");

(4) *Limitation of work in the case of the aged and children* (the Commission favour the raising of the school attendance age; the retirement of workers at the age of 65 years, with old age insurance);

(5) *Return to the land* (This movement "offers, for countries in the process of development, a valuable aid, permitting the re-establishment of an equilibrium destroyed by a too rapid industrial expansion");

(6) *Employment Insurance*.—Under this plan workers who have contributed to an employment insurance fund (made up of premiums payable by workers and employers)

would have the right to share in the public works undertaken, wages being paid by the fund, but the other expenses met by the government. The rate of wages should not exceed two-thirds of "reasonable" wage used in public administration; work would be guaranteed for not more than 26 weeks; workers incapable of adapting themselves to such employment would receive a minimum grant paid partly by the national funds and partly by the public administration. "This plan," it is argued, "would have the advantage of establishing the participation in the unemployment fund of employers and workers. It includes also a participation of the public authorities. It is a remedy for one of the most serious results of unemployment—forced inactivity."

### Unemployment Insurance

Having thus prepared the way the report proceeds to the study of unemployment insurance in the strict sense of the term.

*Field of Application.*—Generally, the Commission considers that all workers employed under working contract, or under the hire and lease of personal service, should benefit. Exemptions might be made possibly in the case of domestic or farm labourers who often benefit from a long term contract. The report discusses various difficulties that might arise in connection with seasonal occupations.

*Payment of Insurance.*—This section discusses the payment of grants to the insured; their amount in relation to average salary; supplemental payments for family responsibilities; and the period for which they should be offered, the practice in other countries in regard to each of these matters being discussed.

*Financing Insurance.*—It is found that obligatory insurance systems now in force comprise generally a triple participation of employers, insured and the public authorities, while almost all of the optional systems are financed entirely by the last two.

*Administrative Authorities.*—"It seems necessary" "the report declares to favour the idea of a national fund, managed and controlled in conjunction with a national system of employment bureaux."

*Federal Jurisdiction.*—That it is possible to establish unemployment insurance on a provincial basis in a federal country such as Canada, is proved by the example of Australia and certain Swiss Cantons. "However," the report continues, "ordinary prudence suggests that unemployment insurance should be federal in character. It is very advisable to spread the social responsibilities over the

whole country, for otherwise, the provinces which participate find themselves, in a condition of inferiority with respect to the non-participants. Moreover, it is easily understood that the establishment of unemployment insurance in only one province would prove a great attraction to the unemployed in other provinces and that his social measure would soon prove a complete failure. One must take into consideration the absence of boundaries between the provinces and the natural facilities of moving about in the country."

The report then makes an analysis of the systems of unemployment insurance in various countries. This résumé covers the field of application of the insurance, indicates the limitations with respect to the trade or industry concerned, and the conditions of salary or age. It describes also the financial organization of the system, resources, grants, and the length of the payment period.

It is noted, in passing, that all countries with unemployment insurance have been forced, undoubtedly because of the financial crisis, to adopt supplementary methods of assistance.

### Recommendations

The report concludes with the following recommendations in regard to the possible establishment of unemployment insurance in Canada:—

1. The Social Insurance Commission believes that unemployment is a problem above all national and international in character, with respect both to its causes and the remedies which it demands.
2. Unemployment insurance, although, according to the law, it falls under the jurisdiction of the provinces, and although in theory it is applicable within the provincial administration, cannot, for the reasons offered in this report, be efficiently organized except in a nation-wide manner.
3. The Commission recommends that the Government of the Province of Quebec should request the Federal Government and those of the other provinces to agree to the formation of a permanent National Committee to undertake joint action against unemployment. This Committee might be known as the Higher Economic Council, as in certain countries of Europe.
4. This common action might be displayed:
  - (a) by directing the development of national production in such a way as to avoid a ruinous over-production and facilitate the development of our foreign trade.

- (b) by an inter-provincial policy of a reduction in the working hours, first in the industries which, by their nature, are adapted to such a policy, and then gradually in the others.
  - (c) by an intensive campaign among manufacturers and workers with a view to persuading them to accept more general application of the principle of a sharing of work.
  - (d) by a study of the unemployment insurance plan submitted in this report, and by its application if it is agreed upon.
  - (e) by the gradual application of unemployment insurance with a threefold contribution (State, employers, and workers), when the economic situation will allow the country to undertake such a burden, and if it becomes clear that the measures indicated above do not give the results expected.
- 5. The Commission recommends that the Government of the Province should continue the struggle against unemployment.
    - (a) by continuing a national policy of return to the land and aid to agriculture; by the development of a co-operation between credit, sale and purchase.
    - (b) by undertaking public works, a measure of the greatest importance, which at one and the same time increase the value of our national heritage and makes it unnecessary to have recourse to the harmful and abnormal methods of direct aid.
    - (c) by applying the methods of combating unemployment which have been mentioned in section 4 of the recommendations (with exception of unemployment insurance), insofar as provincial action is possible.

### Seventh Report—Sickness and Disability Insurance

The final report of the Commission deals with sickness and disability insurance. It represents the opinions formed by the Commission after an intensive study of European systems. "Social insurance," it is stated, "already exists in this province in the form of the mutual benefit society or of group insurance, but it is absolutely optional, as it is throughout the Dominion and in the United States. Accident insurance is the only obligatory form, and that has only existed for two years. Obligatory social insurance, therefore, is a European system. That is why, in 1931, according to the order-in-council establishing the Commission, the Government of the province of Quebec authorized five of the members to go abroad to gather the necessary data on the functioning of social insurance in the principal European countries. The following year, Dr. Lessard, also, during a journey which he made in Europe, studied obligatory insurance with special reference to the medical aspect of the question."

The Commission present the results of their survey in detail, and outline certain general accepted principles which might serve as a basis for legislation in Canada, finally presenting the following recommendations:

#### Recommendations

"The report submitted to the Commission in the name of the Quebec Joint Legislative Committee of Railway Organizations concludes with the following statement:—

"The proposed insurance schemes we have submitted for the consideration of

your Honourable Commission may require modification in view of the fact that we are confronted with an experiment in that line of insurance on the Continent, and may be restricted by the measure of financial support it will receive from the people until its principles as well as its beneficial features are fully understood by the average citizens. Nevertheless, we are confident that their adoption will commend themselves to public attention and should be given force of law at the earliest possible date."

"Having considered the different aspects of the question, the Commission believes that it is advisable to attempt a partial solution by suggesting that here as in Europe the system may be adopted gradually. It is the opinion of the Commission that recourse should be had to the subsidized optional régime before the obligatory system, all the more because the subsidized optional régime will be easy to apply since mutual benefit insurance societies already exist and it would be sufficient to make use of them.

"These societies do excellent work and it is certainly not the intention of the Commission to limit but rather to increase their activity. Among these societies there is one, recently founded, which arrested the attention of the Commission, and that is the National Society of Hospital Treatment (la Société nationale d'hospitalisation). In return for a premium of about eighty cents per month, this society offers to its members medical or surgical attention and hospital

treatment, but offers no money payments. The principle has been successful, for after barely two years of activity, the society has five thousand members in towns as well as in the country. Control is also made easier since it is exercised by the physician who is paid moreover according to a scale agreed to by him. What makes control difficult for other societies is that they guarantee money payments in case of illness with the result that the patient may attempt to prolong his illness in order to receive money over a longer period.

"By undertaking to pay hospital expenses the society lessens to that extent the burden of public charity. Proof of this will be found in the reports of the institution.

"Moreover the actuaries of the society are studying the possibility of extending the benefits of the insurance to the member's family which would be an extraordinary advantage to the small children of a large household, as well as to agriculture which is a 'family profession' as it was defined before the Commission.

"The Commission is of the opinion that a law should be passed; it is not enough to modify the law concerning mutual benefit societies, with a view to authorizing the formation of societies, such as the National Society of Hospital Treatment, which would accept contributions from employers and

workers and receive a grant from the state, the amount to be determined according to the character of the society, *i.e.* country or urban.

"The mutual benefit societies already in existence might institute a service including only payments in kind while continuing money payments to the members who wished to receive them. It will be objected that a law is not necessary in order to attain this end since the present legislation allows societies of this kind to develop but we are convinced that it would be well to give prominence to this kind of institution by means of an appropriate system instituted by the Legislature.

"This régime which could be developed by careful publicity would little by little accustom the people to the idea of sickness insurance; it would ease the burden on public charity and have valuable results on the general health. In all these cases it would constitute an experiment which without any doubt should be attempted, a minimum trial, the results of which could be carefully studied.

"As a result of this experience the public authorities will be able to decide after an interval of five years, whether it is advisable to institute obligatory insurance, taking into consideration at the same time the principles and data which we attempted to assemble in this report."

### Mothers' Pensions in British Columbia

The Superintendent of Welfare of British Columbia recently issued the report of the activities under the provincial Mothers' Pensions Act for the six months period ending September 30, 1932. During the six months, 217 applications were received, of which 107 were granted. Of those granted 21 were admitted in the past six months; 50 were cases held over from the last period; 20 were cases which had formerly been refused for various reasons and the cause now removed; and 16 were reinstated. A total of 34 cases of those received in this period, and 110 of those held over from last period were refused. Cancelled cases totalled 174. The number of mothers in receipt of assistance at September 30, 1932, was 1,547, and the number of children benefited was 3,213. On September 30, 1931, these figures were 1,568 and 3,295 respectively.

Of the 1,547 families assisted, 862 were families of widows; in 313 cases the husband was incapacitated; in 51 cases the husband was insane; in 13 cases the husband was in penitentiary. There were also 49 cases of divorced wives; 196 cases of deserted wives; 55 cases of unmarried mothers; and 8 cases of foster mothers.

Of the 1,547 cases assisted as at September 30, 1932, 837 were paying rent and 710 not paying rent, either owning their own property, having an equity in the same or were living with relatives. In 590 cases there was just one child; in 504 cases there were two children; in 248 cases there were three children; in 125 cases, four children; in 44 cases, five children; in 23 cases, six children; in 10 cases, seven children; and in 3 cases there were eight children. A number of applicants who had received allowances were able to make refunds to the total sum of \$4,082, having received military pensions or other such grants. There was paid to the 1,547 assisted families during the past six months, April 1, 1932, to September 30, 1932, the sum of \$403,135.78. After deducting refunds above-mentioned, the net expenditure amounted to \$399,053.78.

The report recalls that at the last session of the legislature, an amendment was passed placing upon cities and municipalities responsibility for half the amount of Mothers' Pensions Allowances payable to applicants who had their permanent places of abode in such cities or municipalities at the time of

the appearance of the disabilities which caused their indigency.

Reference was also made to the recommendations of the survey into the administration of the Act (LABOUR GAZETTE, April, 1932, page 419), and following out these recom-

mendations it was stated that arrangements had been made for dividing the province into 16 districts with a visitor allotted to each. A sufficient number of trained and experienced persons have been appointed for this work, and are now located on the new fields.

### Invalid and Old Age Pensions in Australia, 1931-2

Statistics of invalid and old age pensions and maternity allowances in Australia for the year ended June 30, 1932, are given in the last annual report of the Commissioner of Pensions and Maternity Allowances. An account of the Australian pension system was given in the LABOUR GAZETTE, September, 1929, page 967. The Invalid and Old Age Pensions Act of 1908 established the pensionable age for men at 65 years, though in event of permanent incapacity this is reduced to 60 years. For women the qualification age is 60 years. The pension is fixed at such amount as deemed reasonable and sufficient having regard to all circumstances of the case, but must not exceed £25 per annum in any event, or be at such a rate as will make the pensioner's income, together with pension, exceed £52 per annum. Old age and invalidity pensions have been paid in the Commonwealth since July 1, 1909, but the portion of the Act authorizing pension payment to women became effective on December 15, 1910. The statistics show that there were 34,762 pensioners admitted during 1931-32. Of this number, 9,627 were invalid pensions and 25,135 were old age pensions. The total number of pensioners (both invalid and old age) on June 30, 1932, was 255,609,—an increase of 15,089. The number of old age pensioners per 10,000 of population was 280·90

while the number of invalid pensioners on the same population basis was 110·78. In 1931-32, the cost of administration in proportion to every £100 of pensions, hospital and asylum payments was 14s. 9d. Exclusive of payments for the maintenance of pensioners in benevolent asylums and hospitals, the annual liability for pensions as on June 30, 1932, was £11,121,500.

*Maternity allowances.*—According to the provisions of the Commonwealth Maternity Act (which was outlined in the LABOUR GAZETTE, April, 1928, page 414) a sum of £5 is paid to the mother in respect to each confinement at which a living or viable child was born. However, as provided by the Financial Emergency Act of 1931, the maternity allowance was reduced from £5 to £4 as from July 20, 1931. This allowance is paid irrespective of the financial status of the mother, and no distinction is made between married and unmarried mothers. During the year ended June 30, 1932, a total of 92,410 claims were paid and 5,229 claims were rejected as compared with 126,149 claims paid and 770 rejections in the previous year. The total amount paid in allowances in 1931-32 was £378,022 as compared with £630,652 in the previous year. The cost of administration totalled £14,180 or £3 15s. to every £100 of allowances paid.

A scheme to absorb unemployed men in the South Wales tinplate industry has been approved by Messrs. Richard Thomas and Co., who control 70 per cent of the British output in this trade. The plan is that at works where an eight-hour shift is worked, a six-hour shift shall be substituted. A reservation is made by the company as to the maintenance of the quality of output.

An advance in land improvement works in Italy was made on December 18, 1932, when the new commune of Littoria, established on land reclaimed from the Pontine Marshes, was ceremonially inaugurated in the presence of Premier Mussolini. This district, for many years practically unpopulated, had 2,100 inhabitants in 1931; today the figure is more

than 17,000. According to plans, some 1,000 farms will be constructed in 1933. A second commune will be inaugurated in the Spring of 1934, and a third in October, 1935.

A young man was recently convicted of having committed perjury by making a false statement before the Workmen's Compensation Board of the Province of Quebec, and was sentenced to four months in gaol. It was found that the accused had cut his finger deliberately and sworn falsely that he had been injured accidentally, receiving \$200 in compensation from the Board. The same sentence was passed on the accused on another charge of defrauding the provincial government, both sentences to run concurrently.

## RECOMMENDATIONS OF COMMITTEE ON COSTS OF MEDICAL CARE IN UNITED STATES

AS a result of five years survey into the economics of medical science and its relationship to public health in the United States, a report entitled "Medical Care for the American People" has been recently published. This research was conducted by a body organized in 1927 and known as the Committee on the Costs of Medical Care. The committee comprised twenty-five medical doctors, two dentists, two registered nurses, six public health teachers or executives, seven representatives of the social sciences, one engineer, one labour leader, one business man and philanthropist, and three women prominent in the field of social work. In addition, a field and office staff of trained research workers, with the co-operation of various other organizations, helped to carry out the program of research into the various economic aspects of medical care. The organization was financed by eight foundations, and functioned under the chairmanship of Dr. Ray Lyman Wilbur, Secretary of the Interior, and under the research directorship of Dr. Harry H. Moore, formerly of the United States Public Health Service.

In the early chapters of its report, the Committee analyses the present situation, states the nature of the problem as indicated by fact-finding studies, and enunciates the essential elements of a satisfactory medical program, emphasizing the committee's idea of the objective desired. The survey deals with experiments in the sphere of health insurance or contract medicine conducted by various communities, and by employers. In this connection reference is made to the action of the Province of Saskatchewan in establishing public health units, and to the "socialization" of medical services in many States and Provinces by the operation of workmen's compensation laws.

Pointing to the remarkable strides made in medical science during the past 25 years, the Committee considered that "as an economic activity, medicine has made much less phenomenal progress." Under the system of private individual practice now prevailing, "medical services are now so provided that many persons either cannot and do not receive the care they need, or are heavily burdened by its costs. At the same time, many of the practitioners and the agencies which provide medical service are inadequately occupied and poorly remunerated. A barrier—in large part economic—stands between practitioners, able and eager to serve, and

patients who need the service but are unwilling or unable to pay for it." The committee were agreed that "the one million persons who furnish medical care and the one hundred and twenty-three millions who may receive it should make concerted and carefully planned efforts to meet needs and to devise remedies for present deficiencies and wastes."

In its recommendations, the committee was divided, and majority and minority reports were presented. These reports are briefly summarized as follows:—

### Majority Recommendations

(1) The Committee recommends that medical service, both preventive and therapeutic, should be furnished largely by organized groups of physicians, dentists, nurses, pharmacists, and other associated personnel. Such groups should be organized, preferably around a hospital, for rendering complete home, office, and hospital care. The form of organization should encourage the maintenance of high standards and the development or preservation of a personal relation between patient and physician.

(2) The Committee recommends the extension of all basic public health services—whether provided by governmental or non-governmental agencies—so that they will be available to the entire population according to its needs. Primarily this extension requires increased financial support for official health departments and full-time trained health officers and members of their staffs whose tenure is dependent only upon professional and administrative competence.

(3) The Committee recommends that the costs of medical care be placed on a group-payment basis, through the use of insurance, through the use of taxation, or through the use of both these methods. This is not meant to preclude the continuation of medical service provided on an individual fee basis for those who prefer the present method. Cash benefits, i.e., compensation for wage-loss due to illness, if and when provided, should be separate and distinct from medical services.

(4) The Committee recommends that the study, evaluation, and co-ordination of medical service be considered important functions for every state and local community, that agencies be formed to exercise these functions, and that the co-ordination of rural with urban services receive special attention.

(5) The Committee makes the following recommendations in the field of professional

education: (a) That the training of physicians give increasing emphasis to the teaching of health and the prevention of disease; that more effective efforts be made to provide trained health officers; that the social aspects of medical practice be given greater attention; that specialties be restricted to those specially qualified; and that post-graduate educational opportunities be increased; (b) that dental students be given a broader educational background; (c) that pharmaceutical education place more stress on the pharmacist's responsibilities and opportunities for public service; (d) that nursing education be thoroughly remoulded to provide well-educated and well-qualified registered nurses; (e) that less thoroughly trained but competent nursing aides and attendants be provided; (f) that adequate training for nurse-midwives be provided; and (g) that opportunities be offered for the systematic training of hospital and clinic administrators.

#### Minority Recommendations

(1) The minority recommends that government competition in the practice of medicine be discontinued and that its activities be restricted (a) to the care of the indigent and of those patients with diseases which can be cared for only in governmental institutions; (b) to the promotion of public health; (c) to the support of the medical departments of the Army and Navy, Coast and Geodetic Survey, and other government services which cannot because of their nature or location be served by the general medical profession; and (d) to

the care of veterans suffering from *bone fide* service-connected disabilities and diseases, except in the case of tuberculosis and nervous and mental diseases.

(2) The minority recommends that government care of the indigent be expanded with the ultimate object of relieving the medical profession of this burden.

(3) The minority joins with the Committee in recommending that the study, evaluation, and co-ordination of medical service be considered important functions for every state and local community, that agencies be formed to exercise these functions, and that the co-ordination of rural with urban services receive special attention.

(4) The minority recommends that united attempts be made to restore the general practitioner to the central place in medical practice.

(5) The minority recommends that the corporate practice of medicine, financed through intermediary agencies, be vigorously and persistently opposed as being economically wasteful, inimical to a continued and sustained high quality of medical care, or unfair exploitation of the medical profession.

(6) The minority recommends that methods be given careful trial which can rightly be fitted into our present institutions and agencies without interfering with the fundamentals of medical practice.

(7) The minority recommends the development by state or county medical societies of plans for medical care.

### Workmen's Compensation in Saskatchewan

Regulation 52 of the Workmen's Compensation Board of Saskatchewan was published in *The Saskatchewan Gazette*, January 16, 1932. The new order replaces Regulation 43 (reproduced in the LABOUR GAZETTE, January, 1931, page 35) the words from "subject to the following exceptions" to the end of the Regulation, being new. Regulation 43 amended Regulation 1 (LABOUR GAZETTE, April, 1930, page 392) in reference to the levying of assessments on employers in which the second paragraph declared that such assessments were subject to the following condition: "Provided that in no case shall any assessment be less than twenty dollars."

#### REGULATION 52

Paragraph one of Regulation 43, adopted by the Board on the 20th day of November, 1930, approved by the Lieutenant-Governor in Council on the 26th day of November, 1930, and published in *The Saskatchewan Gazette*, on the 6th day of December, 1930, is, except

as herein otherwise provided, hereby rescinded and the following substituted therefor:

(1) Provided that in no case shall any assessment levied upon a municipal corporation be less than \$20 upon the annual payroll, and that in no case shall any assessment levied upon an employer other than a municipal corporation be less than \$10 on the annual payroll subject to the following exceptions:

(a) If the annual assessable payroll of a municipal corporation shall not exceed \$300 the minimum assessment shall be \$10.

(b) If the annual assessable payroll of an employer other than a municipal corporation shall not exceed \$300 the minimum assessment shall be \$5.

The rescission of paragraph one of Regulation 43 shall not be deemed to affect any assessable payroll prior to the first day of January, 1933, whether already assessed or to be assessed in the future, nor the assessment thereof, nor collection of assessment thereon, and the said paragraph shall remain in full force and effect in connection with all matters prior to the first day of January, 1933, and Regulation 52 shall govern all assessments made on payrolls earned on, from, and after the first day of January, 1933.

## NOTES ON INDUSTRIAL SAFETY AND HEALTH

### Regulations respecting the Safety of Workmen in Shipyards in Quebec

The following regulations respecting the safety of workmen in shipyards were approved by the Executive Council of the Province of Quebec on December 22, 1932, on the recommendation of the Hon. C. J. Arcand, Minister of Labour for the Province. The regulations are under the provisions of the Industrial Establishments Act, which enables the Lieutenant-Governor in Council to make by-laws respecting the safety of employees in industrial establishments.

#### REGULATIONS

Article 1. Any person or corporation owning one or more shipyards must notify, in writing, the District Inspector of Industrial Establishments of the entry into dry dock, for repairs of all kinds, of any ship used in the transportation of petroleum or any other substance which may generate explosive gases;

Article 2. Before repairs are commenced on the tanks of ships containing or having contained petroleum or any other substance capable of generating explosive gases these tanks must be emptied of all deposits or accumulated residues on the internal surface, cleaned by steam and dried with saw-dust, and such, to the satisfaction of the Inspector;

Article 3. This work of cleaning and drying shall be carried out under the supervision of an experienced chemist. The chemist must remit in duplicate to the proprietor of the dry dock where the work is being done, a certificate bearing his signature and evidencing that the tanks or cisterns have been well cleaned and offer no danger from accumulation of explosive gases. A copy of the certificate shall be remitted to the Inspector and the other posted in a conspicuous place at the entrance of the dry dock;

Article 4. The proprietor of the dry dock or any other person is not permitted to commence or allow the commencing of repairs on the property so called tanks before he has in his possession the said certificate;

Article 5. Petroleum or other substance capable of generating explosive gases which has been drawn from one or more tanks of any ship, must never be emptied either in whole or in part into the pontoons or tanks of the dry dock, but must be placed in special receptacles, tank cars or auto-tanks which must be placed and remain at least 500 feet away from the place where the work is carried on in the shipyards.

### Pneumonia in the Steel Industry

The pneumonia problem in the steel industry was the subject of a study recently carried out by the Office of Industrial Hygiene of the United States Public Health Service, the results being published in the *Journal of Industrial Hygiene*, December,

1932. It is stated that reports from a group of industrial sick-benefit associations to the United States Public Health Service have consistently shown a higher incidence rate of pneumonia among employees of the iron and steel industry than in other industries as a whole. Occupational mortality statistics for England and Wales reveal an excessive death rate from pneumonia in certain occupations of Britain's steel industry.

Among the remedies for these conditions which are presented for consideration are the following:—

1. Mechanical devices to reduce the effective temperature in occupations involving exposure to radiant energy.

2. Extension of the mechanization of processes involving heat hazards will doubtless tend to reduce the frequency and intensity of the workers' exposure.

3. Adequate provision for change houses for employees exposed to the conditions which appear to predispose to respiratory diseases, and compulsory use of such houses are indicated.

4. Shelters appear to be needed in stormy weather by those who work out-of-doors.

5. Reduction of hours of work through the stagger system or some other plan, and the prohibition of double-shift duty, especially during the winter months, in pneumonia-hazardous occupations, would doubtless prevent the development of a number of cases of the disease.

6. In line with the development of education in industrial safety as conducted by the steel industry, furtherance of health education of employees appears to be an important weapon in combating pneumonia.

7. A visiting nursing service, functioning preferably as part of the employee sick-benefit organization, to instruct the patient and help to arrange for adequate medical and nursing care in the incipient stages of disease should reduce mortality and shorten the duration of non-fatal cases.

8. The effectiveness of measures taken to diminish the incidence of pneumonia should be gauged by means of sickness and mortality rates covering, preferably a five-year period, and so tabulated as to reveal the effect of influenza epidemics that may have occurred in the period under review.

### Quebec Pulp and Paper Safety Association

The *Quebec Official Gazette*, January 14, 1933, published by-laws of the Quebec Pulp and Paper Safety Association, which had been approved by the Workmen's Compensation Board, and by the Executive Council of the Province. Sections 106-107 of the Workmen's Compensation Act of 1931 provide that employers carrying on industries in Schedule 1 may form themselves into an association for accident prevention and may make rules for that purpose. If the Commission consider such association sufficiently representative it may approve such rules, which, when approved by the Lieutenant-Governor in Council, are binding upon all employers in the industries in that class. Employers in any class may appoint a committee of not more than five members to watch over their interest in matters relating to the Act.

#### BY-LAWS FOR NECESSARY FIRST AID EQUIPMENT FOR LUMBER CAMPS

1. Every employer must furnish and maintain in each store or depot the minimum first-aid equipment, comprising the material hereinbelow enumerated, and must, moreover, furnish such additional equipment deemed sufficient to administer first-aid to injured workmen, the said equipment must be confided to the care of one clerk, workman or other person duly qualified to administer first-aid to the injured.

##### *Minimum First Aid Equipment*

#### 1. A standard first-aid manual

Instruments:—1 pair scissors, 1 pair forceps (tweezers), 2 eye droppers, 2 dozen safety pins, 1 tourniquet, 1 graduated medicine glass (2 ozs.), 1 porcelain or white enamel basin.

Drugs:—8 ounces tincture of iodine (1-40), 2 ounces boracic acid powder in glass bottle, 2 tubes vaseline, 4 ounces olive oil for eye injuries, 1 recognized antiseptic for washing wounds, either Dichloramine T (Dakin's solution) 100 tablets, or Mercurachrome 4-6 grs., or other non-poisonous antiseptic.

Burn dressing: borated vaseline, or 3 per cent soda bicarbonate in vaseline.

Dressings:—6 one ounce packets absorbent cotton, 3 one yard packets sterile gauze, 12 gauze bandages, 1 1 inch by 5 yards adhesive plaster, 6 Yucca wood splints or equivalent, 6 triangular bandages (Esmarch figures).

2. Every employer shall keep in stock and shall distribute to workmen or contractors working at a certain distance from the depot or main camp, a supply of First-Aid emergency packets of an approved type, in the proportion of not less than two packets for every three workmen.

Emergency Packets:—2 3 inch compress bandage, 2 small ampoules Iodine with shield or 1 large ampoule, 2 1 inch band-aids (or similar protection). Direction for use in French and English to be contained in a waterproof packet.

### Cost of Accidents in Ontario

At a recent meeting in Cornwall under the auspices of the Ottawa-St. Lawrence division of the Industrial Accident Prevention Associations of Ontario. Mr. G. A. Kuechenmeister, of the Dominion Forge and Stamping Company, Walkerville, defined accident prevention as a form of life-saving. While emphasizing that in accident prevention "the saving of life and the avoiding of human suffering is all-important," the speaker drew attention to the cost of accidents: "industrial accidents," he said, "alone cost \$25,000,000 to \$40,000,000 in Ontario each year. Add to that the cost of accidents in the home and our fire losses and you have an appalling sum. Now is the time to fight for Ontario and for Canada in preventing accidents." Forty per cent of accidents, in the speaker's opinion, were due to disorderly conditions, 20 per cent to improper equipment, 20 per cent to improper material, 15 per cent to improper instruction and five per cent to lack of proper supervision.

### Chauffeur's Safety Competition in Quebec

An important feature of the Province of Quebec Safety League's "no-accident" campaign is the inter-fleet competition inaugurated among taxi firms in Montreal. On January 23 the League presented bronze medals to ninety-two chauffeurs of the Montreal Light, Heat and Power Company, indicating that they had driven cars during the past year without an accident. At a recent meeting of the inter-fleet competition committee the secretary reported that there were 77 firms in the contest representing 2,070 chauffeurs in the cities of Montreal, Sherbrooke, Quebec and Three Rivers, St. John and Victoriaville and their districts. The number of hours operated by these chauffeurs, the secretary informed the meeting, was 340,000. The latest available figures showed that there had been a decrease of 59 per cent in the number of accidents during the first part of the year. During the past fifteen months, twenty firms operated without a single accident, but one firm had an increase of 20 to 42 in one month. This firm is receiving special attention from the league.

From the general reports it was found that sixty per cent of the accidents were collisions. The causes showed that speed was responsible for thirty per cent; the failure to respect right of way brought about thirty-four per cent of the mishaps, while sixteen per cent were caused by drivers being on the wrong side of the road. The figures also showed that fifty per cent of the accidents reported occurred to private automobiles, four per cent to busses and sixteen per cent to taxis.

## ANNUAL REPORT OF CANADIAN NATIONAL RAILWAYS FOR 1931

THE annual report of the Canadian National Railway system for the year ended December 31, 1931, shows that for the third successive year the operations of the system reflected the effect of the world-wide business depression which first appeared in July, 1929. "Since that date," it is stated, "the trend of traffic receipts has been continuously downward. The year 1929 showed a decrease as compared with the previous year of 5.53 per cent; the 1930 was 17.22 per cent below 1929; the year 1931 20.28 per cent below that of 1930. The operations of the system at the close of 1931 reached a level of 37.65 per cent below 1928.

The operating revenues during the year 1931 showed a reduction of \$45,095,810.15 as compared with the previous year, a decrease of 20.3 per cent, closely in conformity with the experience of the more important railways on the North American Continent which showed a decrease of 20.7 per cent. "To cope with such a decrease in traffic, following substantial decreases in the two previous years, while at the same time to maintain the property in reasonably efficient condition and to provide transportation services essential to the country, called for extraordinary measures of economy. Salaries, rates of wages and hours have been reduced; the staff of employees has been decreased; many agency stations have been closed; a severe curtailment of train service has been instituted and capital expenditures have been curtailed. A program of extraordinary economies was introduced progressively as the situation developed and the effect will be manifested more completely in 1932 than in the year under review. The management has so far endeavoured to avoid the accumulation of such deferred maintenance as might constitute a serious future liability on the property."

There was a decrease in operating expenses of \$26,085,904.93, 13.3 per cent as compared with 1930. "The average reduction in expense of Class 1 roads in the United States," it is stated, "was 17.9 per cent, and as it is more difficult for a system with low traffic density than for a system with high traffic density to reduce expenses, the percentage reduction achieved by the National System during the year 1931 compares favourably with the experience of Class 1 roads of the United States which enjoy twice the traffic density of the Canadian National System. There is, of course, a vast difference in the extent to which operations of railways, as compared with other industries, can be curtailed. In times of depression most industries can close unprofitable branches to effect a necessary reduction in ex-

penses, as there is always a close relationship between production and consumption; on the contrary a railway must give a reasonable service to the public each day throughout the year, if serious inconvenience is to be avoided."

The report analyses the decline in freight revenues, which declined by \$31,087,127 or 18.92 per cent for the year. Every major group of commodities shared in the decline, the products of agriculture falling by 3.6 per cent; animal products, 8.7 per cent; of mines, 30 per cent; forests 38.7 per cent, and manufactures and miscellaneous, 23 per cent. The production of Canadian newsprint was only 58.1 per cent of capacity during the year. In regard to competitive motor transportation the report states as follows:

"Motor vehicle competition by private automobile, bus and motor truck has made serious inroads into the railway's traffic. The management of the National System is fully in accord with a policy of good highways in this country, but it is becoming increasingly evident that relatively unrestricted and unregulated use of these highways for commercial purposes will, if continued, have serious repercussions. The commercial motor vehicle has a legitimate and economic usefulness in the modern transportation field, but the major portion of the all-year-round transportation burden must remain with the railways. The use of the motor vehicle beyond its proper economic sphere can have no other effect than to increase the total cost of transportation to the citizens of Canada."

Of the total reduction in operating expenses during the year 55.2 per cent was in transportation costs; 12.7 per cent in maintenance of way and structures; 11.4 per cent in maintenance of equipment. Traffic expenses showed a reduction of 14.07 per cent. The reduction of \$26,085,905 in operating expenses during the year is divided in the report as between:

Labour, \$14,681,110.

Material and miscellaneous, \$11,404,795.

The average number of employees on the Railways, including Eastern Lines, was 91,416 in 1931, as compared with 101,046 in 1930, a decrease of 9.53 per cent. The payments to operating labour on the Canadian National Railways System, including Eastern Lines, during 1931, totalled \$126,950,841, a reduction of 11.44 per cent as compared with 1930. Of each dollar spent by the Railway, 63½ cents were expended in payment of labour.

As a measure of economy, main repair shops were closed for one week during the months of July and August, and effective September 1st a reduction of 10 per cent was made in work-

ing hours, reducing the hours to an average of 36 instead of 40 per week. During the year a time reduction plan of one-half day per week without pay was, by mutual agreement, applied to the following forces: Clerks and certain other classes covered by schedule—effective August 1; Non-schedule clerical forces (including all monthly rated employees earning less than \$4,000 per annum)—August 1; Maintenance of Way and Bridge and Building Forces—October 16; Telegraph Department Employees—August 16; Signal Department Employees—December 16. Effective August 1, following a resolution of the Board of Directors a reduction of ten per cent was made in salaries of all officers and employees earning \$4,000 or over per annum.

*Agricultural Credits.*—The report states that the Canadian National System decided during the year to participate in the Dominion Agricultural Credit Company, Limited, and subscribed for 5,000 shares of the capital stock of the par value of \$100 each. This subscription was duly approved by Order-in-Council. On

December 31, 1931, calls had been made for \$50,000 on account of this subscription. The understanding was that a subscription for a similar amount of stock would be made by the Canadian Pacific Railway Company. A member of the Canadian National Directorate was to accept a position on the Board of Directors of this Credit Company representing the Canadian National Railways.

*Pensions and Superannuation.*—Under the provisions of the Canadian National Railways Pension Act (non-contributory) there were retired during the year, 598 employees. The number deceased in 1931 who were in receipt of pension totalled 190. Total number receiving pension under this Act is 2,476.

The Grank Trunk Pension plan was outlined in the LABOUR GAZETTE, January, 1924, page 33, and the superannuation plan of the Intercolonial Railway in the issue of January, 1925, page 27. A measure designed to correct inequalities in the system, enacted by Parliament in 1929, was noted in the LABOUR GAZETTE, March, 1929, page 264; April, 1929, page 396.

## ONTARIO APPRENTICESHIP ACT

### Recent Activities in Vocational Training in the Building Trades

THE following notes on the work now being carried on under the Apprenticeship Act, 1928 (Statutes of Ontario, 1928, chapter 25) have been contributed by Mr. A. W. Crawford, Chief Inspector of Apprenticeship for the Province. The provisions of the Act were outlined in the LABOUR GAZETTE, May, 1932, page 528; subsequent amendments being noted in the issues of May, 1930, page 519, and May, 1931, page 531. "The classes have been in operation since January 9," Mr. Crawford writes, "and although I have not had an opportunity of visiting them, I am assured that they are better than ever and that decided progress has been made in amending the courses and establishing a definite relationship between the trade practice and instruction given in related subjects, such as mathematics, science, drafting, and English. We have two well-qualified men on the staff of the Hamilton Technical Institute, Messrs. Russell and Clench, working in close co-operation with the instructors, in an effort to improve the courses of instruction which were compiled, a little over a year ago, by Messrs. Temple and Easton of Toronto.

"It is very gratifying to all of us that the apprentices who have attended classes are, with very few exceptions, eager to receive further instruction, and our only regret is that we lack the money and facilities to allow

third and fourth year apprentices to receive the benefit of this intensive training. Those who visit the classes are astonished at the excellence of the work done and somewhat surprised at the keen interest of the apprentices. Many employers who criticize the Act are compelled, after visiting the classes, to admit that at least this branch of the work is well worth while.

"Were it not for the serious condition of unemployment and lack of money in the construction industry at the present time, I am sure that we would have had very successful classes in at least four centres during the present winter, and most of our troubles in developing this new system of apprenticeship would have been over. As it is, we are unable to provide continuous employment for boys already indentured and deem it inadvisable to encourage the taking-on of new boys until such time as conditions improve. It will probably be a couple of years or more before we will have regained all lost ground and be in a position to extend the Act into other trades and industries. You will be interested to know, however, that we are utilizing this period of depression to investigate conditions in other industries and pave the way for the extension of the Act when the time is right."

Special day classes for first and second year apprentices in the nine designated building

trades are being held in Hamilton during an eight weeks' period, commencing January 9, 1933. These classes are attended by indentured apprentices from all parts of the province, the total enrolment being 98, distributed as follows:—

|                                 |          |
|---------------------------------|----------|
| Bricklaying and Stone Masonry.. | 14       |
| Carpentry..                     | 13       |
| Painting and Decorating..       | 15       |
| Plastering..                    | 5        |
| Plumbing..                      | 25       |
| Steamfitting..                  | 1        |
| Sheet Metal Work..              | 11       |
| Electric Installation..         | 14       |
|                                 | <hr/> 98 |

Owing to existing conditions in the building industry, few apprentices have been taken on during the past two years, and it has been found advisable to operate classes in only one centre. Hamilton has been chosen largely because of the splendid facilities available and the fact that the Toronto schools are crowded. In previous years, classes have been held in Toronto, Hamilton and Ottawa, and one season two classes were held in Windsor. It is expected that, with the return of more normal conditions, the number of apprentices will rapidly increase, so that special classes may be again opened in these four centres.

During attendance at these classes, each apprentice receives a living allowance of \$10 per week, in lieu of wages. Money for this purpose and for necessary railway fares is provided

from the Assessment Fund, under which employers in the designated trades contribute one-eighth of one per cent ( $\frac{1}{8}$  of 1%) of the annual payroll. Owing to the small number of boys available for classes this year and the fact that a surplus had been accumulated in the fund from previous years, the Provincial Apprenticeship Board suspended the assessment this year and the money required for living allowances will be taken from the accumulated reserve. The tuition fees and all costs of instruction are shared by the municipalities and the provincial government.

Instruction provided in the classes is both practical and theoretical, the teachers being carefully selected from the trades, and special courses being prepared for each group.

Employers and mechanics who have visited the classes in previous years have been agreeably surprised by the quality of the work produced and the eagerness of the apprentices to avail themselves of this splendid opportunity to learn both the technique and operation of their chosen trades. The Provincial Board invites employers and as many other interested persons as possible to become personally familiar with the work being undertaken.

Any person wishing information regarding the nature and operation of the Apprenticeship Act may secure a booklet containing the Act and regulations on application to: Chief Inspector of Apprenticeship, Department of Labour, Parliament Buildings, Toronto 5, Ontario.

### Workers' Co-operation in Production

*Industrial Welfare*, the official organ of the British Works Management Association and other societies, discusses in its January issue "the economic crisis and the human factor," including the question of "productive industrial co-operation" and the proper use of incentives to employees. "It must not be assumed," the writer states, "that incentives must be financial. . . . He (the worker) must be induced to feel a sense of partnership in the enterprise, not to consider himself as a mere machine exploited by it, not to consider himself, his fellow-workers and the enterprise as always battling against one another, each striving to secure the greatest financial gain."

The experience of Arthur H. Lee and Sons Ltd., of Birkenhead, as described recently before the British Association, is cited as an example of the practice of such co-operation: "We had a group of young girls threading needles. This was monotonous, and it was

thought that piece work would stimulate interest, but their output fell from 96 dozen needles threaded in a day to about 75 dozen per day per girl. We realized the girls were too young to be seriously interested in financial matters, so we planned a system of a hundred dozen needles, after which they could go home and play. The result was that all the girls had finished their hundred dozen by 2.30 in the afternoon. Then the sporting element came in, and the girls set out for record breaking, with the result that now the record stands at three hundred dozen a day. I think the Englishman, and probably other nationalities too, will not work hard purely for money. If leadership were ideal financial incentives could almost be set aside. Management is important, and astuteness and diplomatic skill are the last things in dealing with workers. Frankness and simplicity are essential."

## TRADES AND LABOUR CONGRESS OF CANADA SUBMITS LEGISLATION PROGRAM TO DOMINION GOVERNMENT

THE annual presentation of legislative proposals of the Trades and Labour Congress of Canada to the Dominion Government was made by the Executive Council of the Congress at Ottawa on January 27. The delegates included Messrs. Tom Moore (president), James Simpson (Vice-president) and P. M. Draper (secretary-treasurer), who were accompanied by a large number of Canadian representatives of affiliated national and international unions, and representatives of the railway running trades. The Dominion Government was represented by the Right Hon. R. B. Bennett, Prime Minister; the Hon. Hugh Guthrie, Minister of Justice; the Hon. W. A. Gordon, Minister of Labour and acting-Minister of Immigration and Colonization; the Hon. E. N. Rhodes, Minister of Finance; and the Hon. Alfred Duranleau, Minister of Marine.

President Tom Moore made explanatory statements in connection with the various proposals as they were read. The presentation was made on behalf of the 165,000 Canadian workers enrolled in the organizations composing the membership of the Trades and Labour Congress of Canada, and the views expressed were based on decisions reached at the annual conventions of the Congress.

Before proceeding to present the legislative proposals of the Congress Mr. Moore referred to representations which had been submitted to the Cabinet on the preceding day by another labour delegation, and intimated that the Congress might later see fit to submit a statement on the subject matters involved.

The first matter mentioned in the memorandum was the immediate need for steps being taken to bring relief to the several hundred thousands now unemployed. "We recognize," it was stated, "that this condition is not peculiar to Canada but is shared by workers in other countries, and therefore some international cooperation is essential before a proper equilibrium between production and consumption can be established throughout the world. Because of this we urge continuance of participation by the Canadian Government in international conferences called to consider social and economic matters of this kind, or such closely related questions as disarmament, settlement of war debts, stabilization of exchange and currency, etc., and we would further respectfully ask that every effort be made to give effect to the decisions reached at such conferences."

The memorandum expressed appreciation of the action of the Government in having accepted the nomination of the Trades and Labour Congress of Canada for workers' representatives to the last annual conference of the international Labour Organization, also to the special Tripartite Conference on Hours of Labour held in Geneva in January this year. "Since ratification of the Treaty and the inauguration of the I. L. O. in 1919," it was stated, "all Governments of Canada have faithfully adhered to this provision so far as representation at the I. L. O. conference is concerned and in doing so have recognized the Trades and Labour Congress of Canada as the most representative body of Canadian workers from which to accept nomination for workers' delegates or advisers."

The memorandum also expressed approval of the government's action in appointing representatives of the Trades and Labour Congress of Canada on important boards and commissions, including the National Research Council, the Employment Service Council of Canada, Canadian National Railways Directorate and the Dominion Health Council, but regret was expressed that this practice was not again followed in making the recent re-appointment of the workers' member on the latter body.

### Employment and Unemployment

While allowing that this problem had its international aspects, the memorandum pointed out that the success of international co-operation largely depended upon the extent to which conditions are ameliorated in each country by the taking of such action as lies within the competence of the respective governments. The following proposals were therefore made to the Government.

*Unemployment Insurance.*—After a reference to the interprovincial conference held at Ottawa in January, the memorandum proceeded:—"Judging from the support given by other national groups to the oft-repeated proposals put forward by our movement for a national scheme of unemployment insurance to which the State, employers and workers would contribute, we are convinced that this legislation is earnestly desired by the majority of the people of Canada. We, therefore, urge that efforts be renewed to overcome whatever obstacles may still exist so that this piece of legislation may be enacted during the present session of Parliament." Enactment of such legislation would have the result, it

was claimed, that thousands of workers would be saved from the demoralizing effect inherent in the acceptance of public or private relief and that merchants and producers would benefit by the stabilization of purchasing power which would accrue.

Pointing to the need for the provision of work in addition to direct relief, the delegation urged that the Government should use every means at its disposal to create and stimulate employment by undertaking the repair and erection of public buildings and other classes of useful public works including construction of highways, reforestation, clearing of agricultural lands, separation of grade railway crossings, provision of cheap loans for the construction of workmen's homes, etc. It was further suggested that the Federal Government should also return to its former policy of rendering financial assistance to the Provinces and Municipalities for the carrying on of such similar activities as lie within their respective jurisdictions. The time worked on public undertakings, it was proposed, should be limited to six hours per day and five days per week, and the Government should also use all the influence at its command to secure the adoption of the shorter work day and work week by industry generally.

Attention was directed to the declarations of the International Labour Organization (League of Nations) to the effect that the reduction of purchasing power is a contributory cause towards the aggravation of unemployment. "To correct this we believe it essential that, in the shortening of the hours of labour, wages should be maintained at a level which would not further jeopardize the standard of living of workers affected and that wherever feasible to do so, wages and salaries should be increased." It was suggested that the Government take a lead in this by restoring the salary put into effect in respect to its own employees, and particularly as it affected casual workers whose wages are governed by prevailing conditions.

The problem of unemployed transients was next dealt with. "The tightening of provincial and municipal regulations in respect to provision of relief for unemployed workers has resulted," it was stated, "in large numbers who, because of the transient and casual nature of their employment have been unable to establish municipal residence qualifications, too often themselves without means of sustenance and driven from one district to another. The action of your Government in providing work for a small number of this class in the clearing and development of air ports across Canada has been noted and we have every

reason to believe that in these camps the men are well fed and housed and by being given productive employment their morale is being maintained. There is considerable doubt, however, as to whether the cash allowance given in addition to food, clothing and shelter is sufficient to allow for replacement of clothing, etc., and we would urge that further consideration be given to the advisability of increasing this allowance so as to provide for these and other meagre requirements and, if possible, also enable them to save a little in order that they may have an opportunity to reestablish themselves in other occupations without being thrown back on the bread line immediately they cease work in these camps. We consider the provision of work, food and shelter for these men under well-regulated and sanitary arrangements is such a vast improvement over past conditions that it should be extended to take care of the great number who are still left without any means of securing a livelihood."

#### Further Measures to Combat Unemployment

A number of further measures were suggested for facilitating the relief of unemployment, as follows:—

Revision of the British North America Act so as to give greater powers to the Federal Government to deal with social and labour legislation and particularly that covered in Conventions and Recommendations emanating from the annual conferences of the International Labour Organization (League of Nations). Changes should be made which would enable the Federal Government to both enact and administer unemployment insurance and old age pension legislation as national measures.

The veto power of the Senate should be restricted, as was that of the House of Lords in Great Britain several years ago.

The Alien Labour Act should be revised and the responsibility for its administration placed upon a minister of the Government, and in addition the contract labour provisions of the Immigration Act more strictly interpreted and enforced.

In view of the prevailing unemployment amongst Canadian musicians it was suggested that all musicians serving in the bands of the permanent forces of Canada should be removed from the competitive field.

Claiming that the tax on printing proclaimed by the Federal Government, August, 1931, was designed to create employment in the printing industry or provide revenue for the Government and that in either case the

intent had been largely nullified by the printing of articles from plates made outside Canada, the delegation asked that the Canada Copyright Act be amended so as to read:—

"Any printed article requiring Canadian copyright must be printed from type set, or from plates made from type set, within the confines of the Dominion of Canada."

In order to provide revenue for dealing with unemployment it was proposed the levies on incomes or wealth generally be further increased and so graded that the largest percentage be paid by those who possess the greatest wealth.

Amendment of the Bankruptcy Act was recommended so as to give priority of wage claims over all other creditors.

The memorandum re-iterated the stand of the Trades and Labour Congress of Canada in favour of the principle of nationalization of the banking system. Further, it was proposed that the Government should reduce the interest rates on outstanding public bonds and debentures to a rate not in excess of three and one-half per cent so as to establish a more just equilibrium between the value of money paid as interest and that earned through productive enterprise; and that legislative action should be taken to prevent the practice of watering of stock by industrial, commercial and public utility enterprises with the end in view that dividends be allowed to be paid only on actual capital employed by such concerns.

As aged workers are relieved from the necessity of attempting to compete in an already overcrowded labour market, the memorandum requested that steps be taken to make old age pensions applicable to all needy qualified persons in Canada irrespective of the province in which they reside, and that the clause demanding five years provincial residence be repealed; further that the Act be amended to reduce the qualifying age from 70 to 65 years; and to materially raise the present amount of \$360 per year which is now the aggregate of private and pension income allowable before deduction is made from pension payments.

The efforts are now being put forth by various provincial and municipal authorities to place unemployed workers from industrial centres on vacant farm land were approved, and the Minister of Immigration and Colonization was commended for the assistance his Department was rendering in this work.

It was pointed out that the Employment Service Council of Canada might be of valuable assistance in advising on many

phases of employment and unemployment, but that only once since 1930 had this Council been convened. The memorandum suggested that fuller use should be made of the services of the Council during this period of acute unemployment.

The recommendation made for the past two years for the establishment of a National Economic Council, was again made. Such a council, it was thought, might take the form of a small representative committee, on which labour as represented by the Congress would be accorded membership, and under whose guidance a section of the National Research Council would operate. The memorandum suggested that the main purpose of such a body would be to gather facts in respect to the economic changes taking place in industry and agriculture. It was recalled that similar proposals had been brought to the attention of Parliament, the resolution introduced during the last session receiving practically unanimous approval. Almost all major industrial countries, with the exception of Great Britain, had established councils of this character, and in that country the British Federation of Industries and the British Trade Union Congress had jointly made proposals to the Government along similar lines. Immediate action in this direction was urged in view of the need for more adequate information in Canada in respect to the problem of distribution, purchasing power, displacement of labour by machinery, and many other questions related to the growing problem of unemployment.

Pending action which would establish throughout the Dominion the general five-day work week, the delegation asked that steps be taken to revise the Lord's Day Act so as to bring it into harmony with the International Convention respecting One Day's Rest in Seven. "By this means", it was thought, "some limitation would be placed upon those employers who from time to time call upon their employees to work seven days per week which practice often cannot be classed as illegal because of the many exemptions allowed under the existing legislation."

In regard to the Fair Wages Policy of the government the memorandum pointed out that this policy had a material influence upon private employers, who frequently took advantage of the surplus of labour to bring about reduction of wages. There were, however, many public works which were not covered by the Fair Wages provisions, and the delegation therefore asked for amendments: (a) to extend its provisions to cover all undertakings financed wholly or in part by Domin-

ion funds and to companies or commissions operated by or on behalf of the Government; (b) repealing Clause 2 Section 3 of the Act, so as to make the same applicable to all work done in connection with Government contracts. Action was urged to give full application to Section 5 of the Act and regulations thereunder, and it was proposed that all water-borne contracts for the Government of Canada be made only with Canadian registered ships, manned by Canadian personnel and paying the rates of wages recognized in Canada for the respective classes of crews.

In order to secure international peace and security, the memorandum urged the importance of securing an international agreement for disarmament. The participation by the Canadian Government in the World Disarmament Conference was noted with satisfaction and the government was respectfully urged to continue co-operation with such movements.

### Transportation and Public Ownership

The delegation re-interated previous declarations of the Congress in favour of the principles of "public ownership and democratic management of all public utilities" and "Government control and fullest development of all natural resources." The following proposals were submitted in the hope of securing action in harmony with these declarations:—

In regard to radio broadcasting the enactment of the measure last session placing the control of radio broadcasting in the hands of a Government Commission was noted with pleasure, and the hope was expressed that facilities would be extended the commission to fully develop its functions as early as possible. The Prime Minister's declaration on the principle of public ownership made in support of this legislation was commended strongly.

The views of the Congress on the recent report of the Royal Commission on Railways and Transportation had already been made known to the Government in the memorandum submitted in conjunction with the standard railroad organizations. These included recommendations: that there should be no surrender to private interests of the publicly owned railways of Canada and that in any changes made the principle of public ownership should be maintained; that in any reconstruction of the C.N.R. Directorate provisions should be made for the continuance of wage workers representation of a non-political character thereon; that any essential economies should be carried out in such manner so as not to jeopardize

employment of railway workers and further intensify the unemployment situation.

The delegation commended the action of the Government enacting upon the recommendation contained in the Duff Commission's Report and endeavouring to secure agreement with the Provincial Governments for the more effective control of motor transportation on our public highways, and hoped that these efforts would be continued to a successful conclusion. It was suggested that such control should be placed under the Board of Railway Commissioners for Canada or that a new authority should be set up with powers to standardize all rates on a fair and equitable basis with the railways and to enforce the observance of such hours of labour (not more than eight in each day) to insist upon physical efficiency of bus and truck drivers, and to regulate the size and weight of trucks so as to ensure safety to other users of the highways and the travelling public.

Protest was made against the proposed disposal of vessels of the Canadian Government Merchant Marine, except such as were obsolete, which vessels should be replaced by modern vessels.

A system of canal tolls on a tonnage basis was recommended on the Welland Ship Canal by which route more freight and grain would in future be carried to the detriment of the railways, which had to meet all charges in maintaining the right of way, etc.

The delegation again expressed the opposition of the Congress to the recommendation of the Royal Commission on Harbours (Gibb Report) recommending the abolition of Local Harbour Boards and the substitution thereof of one central authority, believing that such absentee control would make more difficult harmonious relations between employees and management.

Revision of Canada Shipping Act was requested during the present session of Parliament, opportunity to be given representatives of the National Association of Marine Engineers of Canada, an affiliate of the Congress, to confer with the Department of Marine on any suggested changes which materially affect their conditions of employment. The Government was commended for its action in passing Order in Council P.C. 2448, dated November 7, 1932, which brings into effect Chapter 48 of the Statutes of 1931 respecting regulation contained in the Safety at Sea and Load Line International Convention. It was proposed, however, that the Act be amended so as to extend its provisions to ships operating on the Great Lakes and that a safety engineer or inspector be

appointed to ensure the proper carrying out of this provision.

Re-introduction of Bill No. 74 introduced by the Minister of Marine during the last session of Parliament, was requested. This measure aimed to correct certain abuses in connection with the coastal trade on the Great Lakes. It was hoped that it would be enacted so as to make its provisions effective at the opening of the 1933 navigation season.

### General Subjects

Other requests in the memorandum were as follows:—

Repeal of Section 98 of Criminal Code, as being too wide in its application and unduly restricts reasonable freedom of speech; and the insertion in the Criminal Code of the clause defining and legalizing peaceful picketing.

Coal Price Investigation—the Government being commended for its action in this matter.

Amendment of the Civil Service Superannuation Act so as to make provision for "prevailing rates employees" viz: those engaged at various trades, wage rates for which are based on those established for similar occupations outside the government service. As this class comprised a considerable number of employees and as many had been in the employ of the Government for long periods it was considered that similar protection should be afforded them as applies to other classes.

Health Insurance was noted as among the measures making for social progress that were being studied of late by a number of the Provinces, and as any such legislation should be uniformly applicable throughout the Dominion, the Federal Government was requested to take action to the end that provincial activities in this connection may be co-ordinated and a nation-wide system of health insurance established.

Grants for technical education in accordance with provisions of the Vocational Education Act of 1931.

Election Act amendments to provide for half-holiday with pay on Federal election days; to enable seamen necessarily absent from their homes on election day to exercise their franchise and to prevent secret contributions towards election campaign funds.

Abolition of grants for cadet training in schools.

Enactment of legislation to facilitate inter-provincial trading by co-operative societies in Canada.

Improvement of letter carriers conditions.

In regard to tariffs, it was suggested that the Industrial Disputes Investigation Act be

made operative in all tariff-protected industries; that control should be exercised over such industries to prevent watering of stocks and charging of unreasonable prices to consumers; that reasonable hours of labour be observed, the wages to be sufficient to maintain proper standards of living and to ensure preference of employment to residents of Canada; that in the appointment of members of the proposed Tariff Board consideration be given to the appointment of a representative of labour chosen on the nomination of the Trades and Labour Congress of Canada.

The establishment of an Advisory Board to the Department of Immigration and Colonization, upon which representation will be accorded industry, labour and agriculture, in addition to the representation of the various Provincial Governments.

Compliance with the International Labour Organization Convention (1922) for the publication and international exchange of emigration as well as immigration statistics.

That boots and shoes should be added to the list of articles covered by the provision of the Customs Tariff Act requiring the marking of the country of origin on such imported articles as the Governor in Council may from time to time decide.

Legalizing of sweepstakes.

### The Prime Minister's Reply

The Prime Minister, in his reply, thanked the delegation for their moderation, and for their appreciation of the difficulties of the government at the present time. These difficulties, he pointed out, were of a kind and an extent hitherto unknown. While an answer could not be given to the several requests without fuller consideration, Mr. Bennett expressed sympathy with the general purpose of the memorandum, which was to bring about improvement in labour conditions. However, he continued, the present burdens on the national treasury made it necessary to proceed with the utmost caution in regard to any proposals that would involve additional taxation. A definite relation existed, he said, between the wealth of a country and its taxable capacity, and in Canada they were dangerously near the limit at the present time. This condition existed not only in connection with the revenue of the Dominion, but also with that of the Provinces and municipalities. As an example of the claims on the treasury he mentioned that a total of \$21,500,000 every month, or \$260,000,000 yearly, had to be raised for only three federal purposes, interest on the public debt, war pensions, and the deficits of the

Canadian National Railways. That amount was for these three purposes only, and did not include the sums required for keeping the federal government machine going, nothing for subsidies to the provinces or for the wear and tear on public works. He reminded the delegates that the population of the Dominion was only about 10,000,000, and that only a few years ago the entire revenue of the

country had been less than \$50,000,000. The Prime Minister concluded by pointing out that the first duty of the Dominion Government at the present time was to hold the country together, and to maintain its integrity, expressing the hope that when the next presentation was made a year hence it would be under more promising conditions than at the present time.

### Province of Quebec Executive of Trades and Labour Congress

The Province of Quebec Executive Committee of the Trades and Labour Congress of Canada submitted their legislative program to the provincial cabinet on January 13. The delegation, which included local representatives of affiliated international and national unions, expressed appreciation of the action of the government in the establishment of a provincial Department of Labour and approval of the appointment of Hon. C. J. Arcand as the first Minister of Labour. Appreciation was also voiced of the decision of the government to acquiesce in some of the reforms requested by the organization in the past.

*Safety and Health.*—The memorandum asked for legislation to govern the erection, operation and supervision of hoisting machinery in building work, and also for an enactment controlling the use of paint spraying machines. It condemned unhygienic printing establishments and unsanitary restaurants, and recommended legislative prohibition of unsanitary locations and practices; that plumbing inspection be made more stringent; and that qualifying examinations for inspectors be held. It also recommended legislation compelling the employment of two licensed projectionists at every moving picture show and the stricter examination of applicants.

*Hours and Wages.*—Under this heading, the committee reviewed the displacement of labour by machinery, and expressed the opinion that "the progressive reduction of working hours would assist in relieving the problem." To this end it was urged that governmental authorities should take the lead and set an example to industry generally, adopting the principle of the five-day week and the six-hour day upon all work undertaken by the Government, either directly or under contract.

The committee drew attention to the alleged practice of some large industries working their employees seven days a week in violation of legislation prohibiting such practice. Prosecution in cases of such violation was urged.

*Fair Wages.*—On the question of fair wages regulations the executive recognized the fact that legislative enactments had provided for

the insertion of a fair wage clause in certain government contracts. "Despite this fact, however," the memorandum proceeded "there apparently have been a number of unscrupulous contractors who have taken undue advantage of present economic conditions to exploit the workers employed on such contracts. We cannot too strongly condemn such action which can only be classed as reprehensible, inasmuch as it deprives the workers of the consideration they are justly entitled to. Your government is therefore urged to take the necessary steps to put an end to such proceedings and to penalize all contractors who violate these regulations to the extent that they would lose the privilege of tendering on any further government works."

The committee also urged, if not already provided by Order in Council, that the regulations be extended to all government departments.

Referring to minimum wages for women the memorandum requested that the Commission be empowered to take legal action to recover wages in cases where employers violated the regulations.

The increasing use of one-man cars on street railways was considered by the executive as "exposing the public to constant danger in congested areas," and the government was asked to take steps to prevent the continuance of this method of operating public conveyances. Under the operation of the Mechanics Lien Act, the executive re-iterated a former request that in all cases of bankruptcy and failure wages should become the first charge upon any recoverable assets.

*Workmen's Compensation.*—Several changes and extensions in the new workmen's compensation legislation were recommended in the memorandum. While pointing out that the Act of 1931, had resulted in "giving reasonable satisfaction to those mainly concerned," the executive criticized the certain phases of its administration, alleging unnecessary delay in the adjustment of a number of cases, and arbitrary interpretations of certain clauses of

the Act. These defects, it was considered, would be remedied by the appointment of a labour representative on the board.

With regard to occupational diseases, it was recommended that the list be extended to include "infected blisters; cancer occurring in connection with the manufacture of pitch and tar; dermatitis and bursitis (inflammation of the synovial lining of the joints), and that, further, dental treatment, where required as the result of an industrial accident should be provided for under the Act."

It was also urged that the scope of the Act be extended to include workers employed in hotels and restaurants.

The report instanced several cases of alleged inadequacy or inefficiency of first-aid treatment. It was therefore urged that "all first-aid work to be placed under the jurisdiction of the Workmen's Compensation Board who should be provided with the authority to establish the necessary standards of efficiency in the administering of first-aid treatment."

*Unemployment Insurance.*—Reviewing the question of Dominion-wide unemployment insurance and the recent interprovincial conference on this problem, the executive recommended as follows:—

"We would therefore strongly emphasize the desirability of your government acquiescing in any measure that will permit of the Dominion Government assuming the responsibility for such legislation, and would urge that the necessary co-operation be granted in the effort to establish a measure of unemployment insurance, Dominion-wide and under Federal control."

*Old Age Pensions.*—The memorandum reviewed the benefits shared by the various provinces coming under the provisions of the amended federal legislation of 1931, increasing the Dominion contribution to 75 per cent and recommended that the provincial Legislature "give immediate consideration to

the acceptance of the old age pension legislation of the Dominion with a view to enacting the necessary legislation that would make it effective in the province of Quebec."

*Sickness and Disability Insurance.*—Referring to the report of the Provincial Royal Commission on social insurance, and to its recommendations in regard to sickness insurance the executive urged that the government "give to the report the consideration that it undoubtedly merits, and in view of the pressing need accentuated by present-day conditions, take the necessary preliminary action to give effect to the recommendations contained in the report."

*Mothers' Allowances.*—With regard to the question of protection for needy mothers, the executive drew attention to "the fact that the Province of Quebec is still lacking legislation, thus placing the women of this province in an inferior position when comparison is made with the women of other provinces." Reference was also made to the report and recommendations of the Royal Commission on Social Insurance, and the executive "pressed the importance of immediate action in the adoption of the recommendations of the Royal Commission on this question." In urging the enactment of legislation instituting a system of mothers' allowances the following two provisions were emphasized: (1) That such allowances should be granted to widows burdened with two or more children, until these children reach the age of sixteen years, with a further proviso that allowances be made to a widow, mother of one or more children, if the mother be ill and unable to work; and (2) That allowances be granted to wives whose husbands are insane or totally incapacitated for work, with the further proviso that aid be given the women in these three classes whether they have one child or more, and until these children reach the age of sixteen.

### Canadian Seamen's Association

In a memorandum addressed to a number of members of the Dominion Parliament, the Canadian Seamen's Association, with headquarters in Vancouver, suggested the following legislative changes. It was urged that the Canada Shipping Act be amended to provide for the establishment of a minimum wage board whose powers would extend to the regulation of seamen's pay and hours of work.

The Association also recommended the establishment of a system of certificates for lower ratings as a measure to ensure the employment of qualified seamen in the places of inexperienced hands, the possession of such certificate to be indicated in the seamen's dis-

charge book. It was recommended that three years' deep water or four years' coasting service be required to qualify for an able bodied seaman's certificate, eighteen months for a trimmer's and two or three years' service for a fireman's certificate, and two years' service on a motorship for a greaser's certificate.

Life-boat certificates were recommended for seamen of all departments, while certificates for marine cooks, issued by a recognized school of marine cookery similar to those already in existence in Great Britain, in Australia and in New Zealand, were also proposed.

It was alleged in the memorandum that special measures are required to protect Cana-

dian seamen against competition from Asiatic seamen, of whom, it was stated, over 2,500 are at present employed on Canadian vessels; and the establishment of certificates would, apart from other damages, constitute a measure of protection.

Complaint was made with respect to seamen's accommodation on many Canadian vessels, and it was urged that shipowners should be compelled to supply sheets, pillowcases, towels and soap twice monthly, and to arrange that blankets should be changed and cleaned every two months.

## ALL-CANADIAN CONGRESS OF LABOUR

### Delegation Interviews the Dominion Cabinet

A DELEGATION representing the All-Canadian Congress of Labour and associated unions presented a memorandum of submissions to the Dominion Government on January 26. The delegation was composed of the following members: Messrs. Zénon David, vice-president, All-Canadian Congress of Labour; W. T. Burford, secretary-treasurer, All-Canadian Congress of Labour; M. Doran and H. Quevillon, Confederation of Catholic Workers of Canada; M. M. MacLean, and M. C. Anderson, Canadian Brotherhood of Railway Employees; R. I. Bradley, Electrical Communication Workers of Canada; E. H. Cook, C. A. Beattie, and S. E. White, Canadian Association of Railway Enginemen, Conductors, Trainmen, Yardmen, Telegraphers, and Dispatchers; R. B. Russell, A. Meikle, A. Hume, J. Duff, and W. McCallum, One Big Union; I. E. Cross, Canadian Association of Stationary Engineers; J. Douglas, Canadian Electrical Trades Union. The total membership of the organizations represented by the delegation was given as 92,000.

The delegation was received by the Prime Minister, and by the following members of the Dominion Cabinet: the Hon. W. A. Gordon, Minister of Labour; the Hon. Hugh Guthrie, Minister of Justice, and the Hon. R. J. Manion, Minister of Railways and Canals. Mr. Bennett thanked the delegation for the presentation of their views, which, he said, would receive careful consideration.

Mr. W. T. Burford, secretary-treasurer of the Congress, read the memorandum of submissions.

The memorandum called the attention of the Government to "the present status of the organized workers in the Dominion," pointing out that various laws permit and facilitate the combination of the workers in unions for the purpose of bargaining collectively as to their conditions of employment. "Yet these laws," it was stated, "though well conceived and wholly commendable in purpose, do not ensure the right of voluntary association. It is submitted that their effect has been nullified in large measure by other laws, that their substance has been vitiated by amendment in

detail, and that, as interpreted and implemented in administrative policy and patronage, they effectually deny the right which they ostensibly recognize. It is hoped that when the handicap which is now imposed on the workers is fully understood the Government will apprehend the need to rectify a condition which is not in the public interest and which does not reflect the will of the Canadian people as expressed in the statutes."

The memorandum then entered upon a criticism of the international labour movement as being unsuitable to conditions as they exist in Canada to-day. That system, it was claimed had been designed to meet the needs of journeymen craftsmen in the days when employment was sought on both sides of the international boundary, but owing to the restrictions on migration and other causes, such a condition did not exist at present. The international unions, however, were still regarded in some quarters as the standard form of organization, to the detriment, it was claimed, of purely Canadian unions. The delegation objected to the recognition of the Trades and Labour Congress of Canada as "the most representative organization" of Canadian workers for the purpose of representation at the International Labour Conferences at Geneva.

The memorandum proceeded to criticize the admission into Canada of an unlimited number of "accredited representatives" of international unions without any restriction upon their activities while in this country. It was claimed further, that the international unions enjoyed special preferences and facilities, as compared with Canadian unions, in regard to the provisions of benefits for their members.

The concluding paragraphs of the memorandum were as follows:—

"The All-Canadian Congress of Labour requests the Government to review the present conditions of labour organization in Canada. It is submitted that the Government, unless it is prepared to go further in the protection of Canadian institutions and cultural interests, should at the very least show impartiality as between the groups of organized workers, in-

stead of a marked preference for a group whose foreign control cannot be disguised. The Congress realizes that the Government might logically extend its 'Canada First' policy so far as to cancel the privileges of all industrial associations which are under the domination of alien central bodies, but it does not ask the Government to go that far. The Government having conceded the propriety of the representation of the workers on certain official delegations, councils and commissions, the Congress requests that such representation shall not be confined to those workers who are members of United States unions. It also requests the removal of all impediments, so far as this is within the powers of the Government, to the exercise by the workers of the right to belong to organizations of their choice. It has no doubt as to what that choice will be, and all it seeks is a fair field and no favour. But for the relief of Canadian workers from foreign control in their union affairs and to ensure their freedom in industrial relations the Congress is convinced that there must be not only a change in governmental policy but also a change in the law.

"The Congress therefore respectfully submits certain specific recommendations. The railway industry being, as already suggested, more closely regulated by legislation than any other industry, and being also, from the workers' standpoint, the key industry in labour organization in Canada and other countries, it is felt that the duty devolves upon the Government of ensuring the equitable incidence of the law on railway employment, and of removing any anomalies which may occur under the law and in the industrial conditions which result therefrom. The one great anomaly resulting from existing railway legislation, in conjunction with the general law concerning industrial disputes, is the facility afforded a union or a group of unions which has once become dominant to continue indefinitely to exercise authority without the approval of the workers upon whose suffrage it is nominally dependent. To remedy this condition, the Government is requested to take steps to amend the Railway Act in such manner as to provide that any class, craft, or category of railway workers shall be able, without risk of intimidation, to name the union which they desire to represent their interests. The draft of a bill, indicating the manner in which the Railway Act might be amended to effect this measure of industrial democracy, is appended

to this memorandum. It is believed that the draft bill will be found to contain nothing which would place an unfair handicap on any railway union, while the All-Canadian Congress of Labour is convinced that the bill offers a means of removing the principal obstacle to freedom of association with which a great number of railwaymen have to contend. The Government is requested to instruct the board of directors of the Canadian National Railways to give effect forthwith to the principle of the bill in the Government-owned railway service, and also to instruct the board to withdraw its recognition from labour unions whose policies are wholly or in part illegal or contrary to the public interest, or which countenance illegal practices by their members and officials.

"It is recommended that the appointment of workers' delegates and advisers to International Labour Conferences shall be made in conformity with Article 389 of the Treaty of Versailles and the judgment of the Permanent Court of International Justice in 1922; also that no workers' delegate or adviser shall be selected without prior consultation with the All-Canadian Congress of Labour and such other organizations as are deemed qualified under the Treaty.

"Finally, the Government is requested to rescind the special privileges now enjoyed by the United States unions having branches in Canada under the Insurance Act, the Immigration Act, and the Customs Tariff."

The Draft Bill to amend the Railway Act, to which reference is made above, was appended to the Memorandum. The proposed Bill contains sections expressly granting employees the right of association in a union of their own choice, the union with the majority of the employees in any class to be deemed the "representative union." In case of dispute between two or more unions as to the right to be so regarded, the Bill lays down a procedure to be followed with a view to solving the question of representation. It is proposed that the Minister of Labour, in such doubtful cases, should ascertain the will of the employees by direct inquiry, a ballot being taken for the purpose of ascertaining the preference of the employees in regard to their union affiliation. At the same time equal treatment would be allowed to members of other unions, in regard to wages, benefits and privileges, as would be enjoyed by members of the representative union.

## Railway Workers Present Memorandum to the Dominion Government

Representatives of the Railway Brotherhoods interviewed the Dominion Government on January 26, in order to present the views of the employees on the subject of reorganization of the Canadian National Railway system as proposed in the legislation now before Parliament. This legislation is on the lines suggested by the Royal Commission, under the chairmanship of Mr. Justice Duff, who presented their report last fall.

On November 24, during the proceedings before the Senate Committee, the views of the employees were presented by a delegation which included Messrs. W. L. Best, chairman, Dominion Legislative Board, Brotherhood of Locomotive Firemen and Enginemen; and R. J. Tallon, President, American Federation of Labour, Railway Employees' Department, Division 4. The brief presented suggested that there be a board of five trustees to administer the Canadian National Railways, one member to be a personnel expert specializing in public relations, in place of the board of three trustees proposed by the bill introduced in the Senate. The brief advocated immediate revision of the Canadian National Railways financial structure, and urged the necessity of imposing upon the railways a statutory duty not to aggravate unemployment as a by-product of co-operation between them. Addressing the committee, Mr. Best contended that hasty action in elimination of railway services and facilities to remove duplication would not tend to improve the railway situation or relieve the conditions prevailing throughout the country. He advocated that where terminal facilities are abandoned, the employees concerned should have their seniority rights adjusted carefully, and should be compensated for any loss suffered, due to decrease of value of property. He stated that railway labour generally does not look kindly upon the proposal for arbitral tribunals, its view being that if compulsory arbitration must be resorted to, the Board of Railway Commissioners would be a much more suitable body to have control than would be arbitral tribunals subject to one-man domination.

Senator Meighen, dealing with Mr. Best's arguments, stated that Canada would face economic disaster and that railway labour would probably suffer before anybody else if the policy of borrowing by, and on behalf of, the Canadian National Railways was continued. Conditions had reached a point where the financial standing of the whole country would be threatened seriously if the borrowings were not stopped. He added that no member of Parliament wished to proceed in

disregard of humanitarian principles, but that the situation must be faced squarely and economies effected, even at some cost to the railway employees.

Mr. Tallon presented figures to show that 51,663 Canadian railway employees had been deprived of employment, the railway payroll having decreased \$63,428,757. Mr. Best contended that it would be preferable to have the country continue to subsidize the railways rather than to deprive more men of employment.

### Second Memorandum

A further memorandum was presented to the Government on behalf of the Railway organizations on January 26, when the Right Hon. R. B. Bennett, Prime Minister, heard the representations of a delegation. A memorandum was submitted by Mr. J. B. Ward, general chairman of the Locomotive Engineers of the Canadian Pacific System. He was accompanied by W. L. Best, Dominion legislative representative of the Brotherhood of Firemen and Engineers, and Frank McKenna, chairman of the C.P.R. System of Federated Shopmen.

The supplementary memorandum urged upon the Government the importance of considering the "human element" in connection with the proposed reorganization of the railways, and "earnestly appealed to the government in the railway crisis, to temper the wind of economy to the workers without bread."

"We must not further aggravate our social conditions," the memorandum declared: "Doctrines, old and new, of a character foreign to our desires are heard everywhere, all of which are eagerly listened to and sometimes accepted by the man with a family in difficulty."

The memorandum expressed the opinion of the workers as in favour of preserving the identity of the two railway systems in Canada, and proceeded as follows:—"Railway workers, just as the Royal Commission, are also compelled to sound a note of warning to the Canadian people. There are now nearly a million Canadian wage-earners out of employment. Almost one million Canadian citizens are subsisting upon charity and government aid. There is no worker by hand or brain whose wages has not been cut. There is scarcely an employee who is not sharing his work with as many of his fellow workers as he can possibly help and not call for charity or assistance from the government.

"In the railway industry over 60,000 men are wholly without employment and the rest are all working short time. Nor is that all.

Out of their reduced earnings, as meager as they are in thousands and thousands of cases, railway men are now contributing 10 per cent to reduce the burden upon the federal treasury and to improve the financial position of the privately-owned railway. Practically every demand which has been made upon railway labour, whether in the form of wage deductions, reduced hours or mileage or total discharge, has only served to aggravate the prevailing business depression and further weaken the financial position of our railways. No constructive end is served by reducing purchasing power and increasing unemployment. It does not revive business. It does not create traffic. Instead it slows up the whole industry. It ruins the farmer. It defeats its own purpose.

"For these reasons railway labour earnestly appeals to the government, in the railway crisis, to temper the wind of economy to the workers without bread. We who speak for the railroad workers are not unmindful of the gravity of the Canadian railway situation. We want to be helpful and are prepared to be helpful in a solution of the problem.

"Our primary interest is, very naturally, in the personnel of those engaged in the railway industry, men and women who have devoted very many years in most cases to the positions they occupy and have occupied. They live in communities stretched throughout the length and breadth of the inhabited portion of our Dominion. Many of them live in small communities far removed from great cities and our social organization, and in these places they have invested their all in the requirements of growing families, such, for instance, as the primary needs of food, shelter, and clothing. In most instances homes have been acquired by the mortgage system requiring much family sacrifice in order that the home may some day be declared free. Only too often when that day arrives the railroader has reached an advanced age. In many such places the local populace are often represented on school boards and local government bodies by railroader workers and this because of their permanence in such localities and the vital interests they have been obliged to take in their offspring and their own social requirements. They and theirs often are considered the backbone of our citizenship in such localities. The same may be said in varying degrees of railroaders in our greater transportation centres. These people are Canadians, many originating in other lands, but Canadians all, taking pride in sending their children to schools and colleges and in many instances universities.

They are our neighbours, your neighbours, of us, belong to us, part of our life, gradually, consciously and unconsciously working to a higher life standard.

"The faith we have in our institutions compels us to believe that international lanes of commerce may be reopened. In fact they must be reopened else civilization sink in despair. Conferences of an international character such as are projected for the near future in connection with international economies, etc. will, we hope, lead the way to our national recovery. With that recovery the rail situation will gradually improve, assisted very materially by the knowledge we have all gained of our transportation difficulties and the agreement already entered into by the Canadian National and the Canadian Pacific Railway to retain their rivalry on a friendly basis to the advantage of themselves, their employees and the country at large."

The Prime Minister thanked the delegation for the statement of their views. In reply, he emphasized the serious condition of the railways, which he declared to be threatening the very economic life of the country. "No language," he said, "would be too extravagant to describe the seriousness of Canada's railway problem." The delegation had claimed that too much stress was being placed on financial difficulties, and not enough on the human element. In reply, Mr. Bennett asserted that if the railway enterprises were obliged to cease operations altogether there would be no work at all. "Our effort," he declared, "is to maintain these enterprises as going concerns. This is our job, our responsibility." Canada's economic life was at stake, he continued. The deficit of the Canadian National Railways was \$70,000,000 in 1932, and this year it might be about a million dollars a week, which had to be met by the taxpayers of Canada. With a population of only ten million people, the payment of taxes was a difficult problem, and the breaking point had almost been reached. Under normal conditions the Canadian National would be considered as in receivership, but receivership was impossible in this case because the railway bonds were guaranteed by the government. The Prime Minister stated that the government and the Canadian National Board of Trustees (recommended by the Duff Commission), would endeavour to exercise their responsibility to maintain the railways as going concerns, giving employment as far as possible, but sacrifices would have to be made. "But it will be a common sacrifice, and everyone will have to suffer."

## Quebec Joint Legislative Committee of Railway Brotherhoods

The Joint Legislative Committee (Province of Quebec) of the railway brotherhoods, representing locomotive and train service employees, recently submitted its memorandum of proposed legislation to the Hon. L. A. Taschereau, Premier of Quebec, and the members of the provincial cabinet.

**Motor Vehicle Regulation.**—The delegation submitted several recommendations respecting motor vehicle competition and regulation. Summarized, these urged: that more equitable taxation be levied upon all motor vehicles using the highway for revenue purposes, such taxation to be in addition to that now imposed upon highway traffic of all kinds; that regulations be made fixing adequate and uniform freight and passenger tariffs on all motor vehicles using the highway for revenue purposes; that sufficient financial responsibility be required on the part of owners and operators of all motor vehicles; that no franchises be granted to operate bus or truck lines where there already exists adequate transportation facilities, or where the steam railway companies can and are willing to provide those facilities.

It was also urged that the present highway traffic legislation be amended that all drivers

of motor vehicles be required to pass a qualifying physical examination and that there be restrictions against excessive hours of duty.

**Social Insurance.**—The Committee referred to the comprehensive study and inquiry conducted by the provincial Royal Commission on Social Insurance, and "hopefully anticipated that with the Social Commission's Final Report and Recommendations before the Government, followed by the enactment of the recommended legislation, the Province of Quebec will be in the vanguard of any Province in Canada in the matter of social and humanitarian legislation."

**Mothers' Allowances.**—Pointing out that seven provinces of the Dominion and forty-five states of the United States had established systems of mothers' allowances, the committee emphasized the enactment of similar legislation in the province.

**Old Age Pensions.**—The Committee recommended that the Legislature enact legislation, making the Dominion Old Age Pensions Act effective in the province.

## ALBERTA FEDERATION OF LABOUR

The seventeenth convention of the Alberta Federation of Labour was held at Calgary on January 9-11, with approximately 60 delegates in attendance. Mayor Davison, a member of the International Typographical Union, welcomed the delegates to the city, while Mr. J. E. Worsley, president of the Calgary Trades and Labour Council, extended a welcome on behalf of the trade unionists of the city.

The joint report of the president and secretary reviewed the work of the Federation for the past year. Mention was made of the representations that were made to the government following the last convention and the matters of interest to organized labour which came before the legislature at the last session. The report referred to the essay contest dealing with social legislation which was authorized last year but owing to the small number competing the officers doubted the wisdom of a continuance of the competition. According to the treasurer's report total receipts including balance brought forward amounted to \$2,291.89, disbursements totalled \$1,405.31, leaving a balance on hand of \$886.58.

The convention adopted the resolutions outlined in the following paragraphs:—

Proposing numerous amendments to the Workmen's Compensation Act including the following: (a) to raise the compensation paid in respect of widows to \$70 per month, and that for children from \$12 for the first child, \$10 for the second child, \$9 for the third and remaining children, to \$15, \$12, and \$10 respectively; (b) that desired information be supplied to any contributory to the compensation fund concerning monies paid out; (c) to increase the amount of compensation to one hundred per cent of average earnings; (d) deletion of the three-day waiting period, computation of earnings of salaried employees on a monthly basis; railway companies to be placed under the ordinary provisions of the Act.

That all relief work shall be paid at union rates of wages, but where direct relief is substituted, the amount shall be sufficient to guarantee an adequate standard of living for recipient and dependents;

Amendment to the Mines Act to provide that "all miners who produce coal shall be paid for all coal that they produce on a run of mine basis only";

That miners be paid weekly;

That the age at which a miner may start to work be raised from 18 to 19 years, and that all persons working underground must be 18 years of age;

A maximum work-day of six hours, and a five-day week;

To encourage naturalization of newcomers after the necessary residence period;

Amendment of the Old Age Pensions Act lowering the age requirement from seventy to sixty;

Amendment to the Vehicles and Highways Traffic Act requiring drivers of vehicles to draw to the right-hand curb and stop on the sounding of a signal by any fire apparatus when responding to an alarm;

That the Alberta Government prosecute a campaign for fire prevention education;

Approving any amendment of the British North America Act to enable the Federal Government to enact unemployment insurance legislation or other national measures;

Establishment of a bank owned and controlled by the government for the nationalization of the monetary system;

Amendment of the Mothers' Allowance Act to include deserted wives;

Legislation on health insurance;

That election day be declared a public holiday;

Amendment of the Franchise Act making the residence period three months for all British or naturalized subjects;

That the Industrial Disputes Investigation Act be made operative in Alberta;

Requesting the Federal Government to include in the representatives to the conference on unemployment insurance, officers of the Trades and Labour Congress of Canada;

A free municipal legal court;

The six-hour day on all provincial government contracts let for highways, building and maintenance work for both permanent and temporary employees, and that a fair wage similar to the Federal Fair Wage be paid on this class of work;

Protesting against any change from the present ownership of the Canadian National Railways;

Opposition to any further reduction in wages;

Protesting against reduction in mothers' allowances;

That the provincial university be kept at least up to the present standard of education;

That all paid fire departments of the province have an 8-hour day;

Requesting the Federal Government to go off the gold standard;

Legislation to give all workers in Alberta a minimum wage, especially workers in the lumbering and motor trucking industries;

Increase in the minimum amount on which income tax is levied;

Assistance in securing for railroad workers the six-hour day and thirty-hour week;

That no officer of the Federation shall at any time attend a conference meeting or accept an appointment on a committee dual to this Federation;

Contributory retirement insurance scheme of old age pensions for railroad workers of Canada;

A housing scheme for workers in the province similar to that prevailing in some states in the Australian Commonwealth;

Opposing any curtailment of present educational standards;

Formation of union label committees;

Taxing of fire insurance companies to provide funds for a firemen's pension fund;

Opposing the abolition or lowering of the minimum salary of seventy dollars per month for school teachers;

Continuance of compulsory education up to the age of eighteen years, and that free education be continued through university whenever ability is evident;

Appointment of qualified plumbing inspectors;

That the Federal Government take over the transportation systems of Canada and operate them for service instead of for profits and dividends;

Two-men-on-shift law for theatres;

Financial assistance from the province for all workers and their families who are in distress;

Seniority rights for a miner elected as checkweighman;

Recommending seventy-five feet as the maximum distance to which rooms in a mine shall be driven without crosscuts;

Establishment of by-products plant in the Drumheller Valley;

Legislation to create a coal commission to regulate shipping and inter-provincial trade by means of a co-operative marketing pool;

Segregation of East Coulee from the Drumheller and Wayne Coal Districts;

Appointment of a commission to formulate plans for the nationalization of the coal mining industry in Alberta; labour to have a representative on such commission.

Establishment of a clinic in the city of Drumheller.

Officers elected were: President F. J. White, Calgary; Secretary-Treasurer, Carl E. Berg, Edmonton.

Edmonton was selected as the next convention city.

## International Federation of Trade Unions

The Executive Committee of the International Federation of Trade Unions decided at a recent meeting that when the results became known of the Preparatory Technical Conference of the International Labour Organization on shorter working hours\*, arrangements should be made to hold the annual General Council meeting of the I.F.T.U. in the spring of 1933, with a view to lending weight to activities in favour of the 40-hour week and other measures to combat unemployment. The dates of these Conferences are to be fixed in connection with the meeting of the next Session of the International Labour Conference.

The next session of the International Trade Union Congress will meet at Brussels from July 30 to August 3, 1933. The Executive Committee adopted the agenda of the Congress, which will include, besides the report on activities, discussions on the guiding prin-

ciples of social policy of the International Federation of Trade Unions, and on the demands of the Federation for economic planning. A preliminary draft of the latter was presented to the Committee and approved. A committee of experts met in December for further discussion and formulation of demands dealing with the reconstitution of the existing economic system. The draft demands for economic planning are also to be discussed by the Joint Executive Committee of the International Federation of Trade Unions and the Labour and Socialist International.

The creation of an independent Workers' Education International has been postponed, since certain national centres have not submitted replies to the questionnaire issued on the subject. It was, however, decided to do everything possible to promote the making of international labour films.

## National Economic Councils in Various Countries

A review of Economic Councils in the different countries of the world was published recently at Geneva by the League of Nations Economic Committee. The inquiry was made in pursuance of a resolution of the Assembly of the League in 1931, requesting the Council "to seek the most appropriate means providing for the co-operation of National Economic Councils in the work of the League of Nations." (Reference to the establishment of such councils in various countries have been noted in the *LABOUR GAZETTE* from time to time, April, 1932, page 422; February, 1931, page 118, etc.) The rights and duties of economic councils, it is found, are manifold, but differ in the various countries. All councils without exception are advisory bodies, their main object being to furnish advisory opinions on economic questions in general. In most cases, financial and social problems are automatically included—sometimes they are specifically enumerated. Advisory opinions are required more particularly for legislative proposals. The right to initiate proposals is conferred on all economic councils, though it is sometimes bound up with specific conditions. Advisory councils of experts, more especially, have been granted power to carry out investigations, more particularly in Belgium, the United Kingdom, Finland, Greece and Spain. A feature which has only taken

shape in recent months is the assignment to economic councils of the framing of a plan for the whole national economy.

The report describes the constitution and work of the Economic Councils existing in 28 European countries, and in Asia, America, South Africa and Australasia.

### The Soviet Economic System

The report contains the following brief summary of the economic councils in Russia. "The idea of a State constituted by councils representing the working population had a repercussion in other countries, and in Germany, for instance, was one of the causes of the institution of an Economic Council. The Soviet Union's schemes of economic planning are affecting public opinion outside Russia as well, and, in certain countries, the Economic Council is to be summoned to give effect to similar ideas (China, Spain). A short description might therefore be given here of the main features, at least, of this economic system.

"1. The Russian State is based on the Soviets. These consist of representatives of the units of production—i.e., works and factories, villages and barracks—and are elected directly by the workers, peasants and soldiers. They represent, therefore, the will of the working population, the proletariat. The dele-

\* A report of this conference appears later in this issue.

gates are elected for one year but may be removed at any moment, and have to account for their actions to the workers, peasants and soldiers. In Soviet Russia, therefore, the electoral system is organized, not on a territorial basis, but on that of the producing establishment.

"2. The Soviet organization comprises: (a) The Congresses with which decisions rest, and (b) The Executive Committees.

"The supreme authority is the Congress of Soviets of the Union of Soviet Socialist Republics and its Executive Committee, which combines both legislative and executive functions. The Soviets, however, constitute not only the political but, at the same time, the economic administration of the State, and have the direct conduct of the whole national economy.

"3. The Supreme Economic Council was mentioned in the 1918 Constitution among the seventeen People's Commissariats then instituted. It has been reconstituted on several

occasions. In the beginning of 1932, it was divided into the People's Commissariats for the heavy, light and timber industries. The Supreme Economic Council has set up forty-four Regional Administrations, which consist, like the Council's own Managing Board, of workers—employees and managers. It controls only the industrial syndicates and trusts and not the whole economic system; in March, 1931, there were eighty-four such bodies. It supervises the control of industrial centres and industrial combines, and acts as a tribunal of appeal for differences of opinion in the managing boards of industrial combines. It can issue orders and instructions in this connection.

"4. Next, the State Planning Committee prepares the annual economic plan, the figures fixed in advance for production, the general directions for production and the long-term schemes, such as the Five-Year Plan. On February 5, 1932, the main lines of the second Five-Year Plan covering the years 1933 to 1937 were laid down."

## LEAGUE OF NATIONS INTERNATIONAL LABOUR ORGANIZATION

### Seventeenth Session of the International Labour Conference

The Governing Body of the International Labour Office decided at a meeting held on February 2nd to postpone the date of the opening of the Seventeenth Session of the International Labour Conference to June 8th of this year. The date previously fixed had been for May 31.

The International Labour Office has sent to the Governments of the States Members of the Organization the agenda, in its final form, of the Seventeenth Session of the International Labour Conference which is to open in Geneva on June 8, 1933.

This agenda includes no less than five items. In the first place there are the questions of the *abolition of fee-charging employment agencies, and invalidity, old age and widows' and orphans' insurance*, which were discussed for the first time at the 1932 Session and will therefore come up for the second and final discussion in 1933 with a view to the adoption of draft Conventions or Recommendations.

Two other questions are coming before the 1933 Conference for the first time: that of *methods of providing rest and alternation of shifts in automatic sheet glass works* and that of *unemployment insurance and various forms of relief for the unemployed*, a subject of special importance in view of the persistence of the economic depression. Following the

usual procedure of the International Labour Conference, these two questions will be discussed for the first time at the Seventeenth Session with a view to determining the points on which Governments are to be consulted in order to enable the preparation of the final decisions to be taken at the following session.

There is another problem closely linked up with the economic depression which forms the fifth and last item on the agenda of the International Labour Conference for 1933, the question of the *reduction of hours of work*. On this subject the Conference will have before it the report of the Tripartite Preparatory Conference which has been convoked specially and will meet in Geneva on January 10, to study the technical aspects of this question.

The International Labour Conference will also examine at its Seventeenth Session the ten-yearly reports on the application of six international Conventions adopted in 1920 and 1921 with regard to which no proposal for revision has been made.

A report will also be submitted to the Conference on collective agreements in agriculture.

Finally, as is customary, the Conference will discuss the report of the Director of the International Labour Office on the work of the Organization and the annual reports submitted by States in virtue of Article 408 of the Treaty of Peace concerning the measures

taken by them to enforce the Conventions which they have ratified.

### **Ratification of International Labour Conventions**

On November 30, 1932, the number of ratifications of International Labour Conventions registered with the Secretary-General of the League of Nations and officially notified to the International Labour Office was 488. The number of ratifications authorized by the competent national authorities by that date, but not yet registered with the Secretary-General of the League of Nations was 52.

During August, September, October and November, 21 new ratifications were registered.

*Belgium* ratified the Convention concerning workmen's compensation in agriculture (1921).

*Bulgaria* ratified the Convention concerning forced or compulsory labour (1930).

*Czechoslovakia* ratified the Convention concerning workmen's compensation for occupational diseases (1925).

*Finland* ratified the Convention concerning the marking of the weight on heavy packages transported by vessels (1929).

*Hungary* ratified the Convention concerning the creation of minimum wage fixing machinery (1928).

*India* ratified the Convention concerning seamen's articles of agreement (1926).

*Japan* ratified the Convention concerning forced or compulsory labour (1930).

*Spain* ratified the Conventions concerning: the employment of women during the night (1919); the minimum age for admission of children to industrial employment (1919); the night work of young persons (1919); the age for admission of children to employment in agriculture (1921); the rights of association and combination of agricultural workers (1921); night work in bakeries (1925); workmen's compensation for occupational diseases (1925); sickness insurance for workers in industry and commerce and domestic servants (1927); sickness insurance for agricultural workers (1927); the marking of the weight on heavy packages transported by vessels (1929); the protection against accidents of workers employed in loading or unloading ships (1929); forced or compulsory labour (1930); the regulation of hours of work in commerce and offices (1930); hours of work in coal mines (1931).

By these fourteen new ratifications Spain has brought the number of its ratifications of International Labour Conventions to thirty, and thus takes the lead among the States Members of the Organization from this point of view.

### **Publications of the International Labour Office**

*Rest and Shifts in Glass Works.*—The International Labour Office has published a "Grey" Report on "Methods of providing rest and alternation of shifts in automatic sheet-glass works"—the fourth item on the agenda of the 17th Session of the International Labour Conference, which opens in Geneva on May 31, 1933.

The question of the weekly rest in glass works was before the Conference in 1924 and again in 1925, when a Draft Convention on the subject failed to secure the majority required for its adoption. The obstacles to its adoption arose mainly out of the technical problems involved in a stoppage of work in mechanical sheet-glass factories. In 1929 the Conference passed a resolution in favour of further consideration of the possibility, by suitable organization of shifts, of ensuring that glass workers in such factories should have the benefit of a regular rest, until such time as mechanical progress made it possible to give them the Sunday rest without adversely affecting production. In accordance with that resolution, the question has been thoroughly explored by the Office, in consultation with a special committee of experts, and in January, 1932, the Governing Body decided to place the matter on the agenda of the 1933 Session of the Conference in the form indicated by the title of the report just issued.

The aim of the report is to provide the Conference, as a basis for its first consideration of the subject under the double-discussion procedure, with a general survey of the present systems of regulating the provision of rest and the alternation of shifts in automatic sheet-glass works in the various countries. A brief description is first given of the manufacturing processes, the machines used, and the work involved. This is followed by an analysis of the various methods at present employed for ensuring continuity of work. Finally, the report indicates the essential factors to be considered when the time comes for framing international regulations, and enumerates the points on which it would be advisable to consult the Governments in the interval between the first and second discussions.

*Non-Contributory Pensions.*—Under this title the International Labour Office has just published a study comprising a comparative analysis of the principal features (qualifying conditions, computation of pension, finance and administration) of all the non-contributory pension legislation which is known to exist at the present time. In addition to a general introduction dealing briefly with the history of the subject, the

volume consists of four parts dealing respectively with pensions for aged, invalid and blind persons, mothers' pensions, financial resources and pension authorities, together with two appendices, one containing statistics and the other a list of non-contributory pension Acts.

This volume forms the necessary complement to the larger study which is being issued on the subject of pension insurance.

*Industrial Relations in Great Britain.*—The volume just published by the International Labour Office under this title is the first of a series of national monographs on industrial relations which the Office is preparing, with the generous aid of Industrial Relations Counsellors, Inc., of New York. Reference to the present publication is made in the notes at the beginning of this issue.

### Credit Unions in Nova Scotia

The rules and regulations under the "Credit Union Societies Act" of Nova Scotia, 1932, were published as a supplement to the *Nova Scotia Gazette*, December 14, 1932 (reference to this legislation was made in the *LABOUR GAZETTE*, December, 1932, page 1247). The capital of the union is obtained by means of shares subscribed by the members. The rules governing loans are as follows:—

The credit union may make loans exclusively to its own members, except that a loan to a member which is a similar or affiliated corporation may be made only with the consent of the Registrar. Security satisfactory in each case to the credit committee shall be required of all loans in excess of fifty dollars, to which limit loans may be made without other security than the note of the borrower. No loan shall be made except for a provident or productive purpose. A borrower may repay his loan in whole or in part any day the office of the credit union is open for business. A member may not borrow from the credit union when not in good standing, or if he has failed to repay any previous loan, or is in arrears in the payment of any current loan or instalments thereon. No loan shall be made except on written application which contains all of the information required and is signed by the person desiring the loan. All applications for loans shall be filed as permanent records of the credit union. A member failing to pay an instalment on a loan when due, unless excused therefrom for cause by the board of directors, shall pay a fine of  $\frac{1}{2}$  of 1 per cent per instalment period on the amount in arrears, the minimum fine to be five cents. If instalment, interest or fines remain unpaid for any one month, the board of directors may take such steps toward terminating his membership and making collection as may in its judgment be advisable.

It is provided that at all meetings of the members each member shall have but a single vote whatever his share holdings, and there shall be no voting by proxy.

The *Canadian Co-operator*, January, 1933, gave an account of four credit societies that have come into existence in Nova Scotia since

the legislation of 1932 became effective. The first was the Parish Credit Union at Broad Cove, where "it was voted unanimously to organize a Credit Union, to be known as 'The Filene Credit Union,' in honour of Edward A. Filene, of Boston, Mass., the father of co-operative credit in the United States, to whose generosity the expansion of the movement on this continent during the last decade must be principally attributed."

The second credit union was organized at a public meeting at Miners' Hall, Inverness. "This is a community credit union to which all the men, women and children of Inverness are eligible. We understand that this will be a very large credit union, and will operate under particularly favourable circumstances because Father MacDonald, the priest at Inverness, now heads up a committee of five (two miners, two store-keepers and Father MacDonald) and they are operating the coal mine on which that community depends for its existence on strictly co-operative lines" (the organization of the "Inverness Co-operative Company, Limited" was noted in the *LABOUR GAZETTE*, September, 1932, page 947).

The third unit is the "Reserve Mines Credit Union," also a community organization, composed principally of miners working at Reserve Mines, about ten miles from Sydney.

"The fourth credit union is a typical industrial one, organized at Sydney to satisfy the needs of the employees of the local gas and electric company, and the local street car company. A recent Canadian Press despatch reported that this street car system is now operated by the employees for their own benefit."

Referring to recent co-operative activities in Nova Scotia, the *Co-operator* quotes the opinion of Mr. Roy F. Bergengren, executive Secretary of the Credit Union National Extension Bureau of Boston, who took an active part in organization work in the Province. Mr. Bergengren indicated that he was very favourably impressed with the prospects of developing a sound and extensive Co-operative Credit Union Movement in Nova Scotia. The conditions prevailing there remind him very much of those in Germany when Raiffeisen, the father of Agricultural Co-operative Credit, started his work.

## REDUCTION OF WORKING HOURS AS A MEANS OF RELIEVING UNEMPLOYMENT

### Report of Tripartite Preparatory Conference convened by International Labour Organization

**A** Preparatory Conference, convened by the Governing Body of the International Labour Office (League of Nations) for the study of the technical problems involved in the reduction of hours of work as a means of relieving unemployment, was held in Geneva, Switzerland, on January 10-25. Each of the fifty-eight member countries of the International Labour Organization was invited to be represented at this gathering by three delegates, one to represent the Government and the other two to be representatives of employers and workers, chosen in agreement with the most representative organizations of employers and workers in the respective countries. Provision was made also for the appointment of technical advisers.

Thirty-five countries in all were represented at the conference as follows: Albania, Austria, Belgium, Brazil, Great Britain, Bulgaria, Canada, Chile, China, Cuba, Czechoslovakia, Denmark, Dominican Republic, Finland, France, Germany, Hungary, India, Irish Free State, Italy, Japan, Latvia, Luxemburg, Mexico, Netherlands, Norway, Persia, Poland, Portugal, Roumania, South Africa, Spain, Sweden, Turkey and Yugoslavia. Egypt, although not a member of the International Labour Organization, was represented by an observer. The Government of the United States, while not appointing a delegation, instructed its Consul in Geneva to follow closely the Conference proceedings. The Russian Government also had been invited to appoint representatives but regretted its inability to participate and intimated that it had intended taking part in the Conference if the same had been held at the same time as the World Economic Conference. The total number of delegates in attendance was 74, and the total number of advisers, 72.

#### Canadian Delegates

The delegation from Canada was made up as follows:—

*Government Representative.*—Dr. W. A. Riddell, Canadian Advisory Officer, League of Nations, Geneva, Switzerland.

*Employers' Representative.*—Mr. A. R. Goldie, Galt, Ont. (Chairman of the Industrial Relations Committee of the Canadian Manufacturers Association).

*Workers' Representative.*—Mr. R. J. Tallon, Montreal, P.Q., Vice President of the Trades

and Labour Congress of Canada, and President of the Railway Shop Crafts Federation of Canada).

#### Officers of Conference

The Conference appointed as its President, Mr. Ernest Mahaim, Belgian Government delegate. The following were appointed as Vice-Presidents: Sir Atul Chatterjee (India), Government Vice-President; Mr. Oersted (Denmark), Employers' Vice-President; and Mr. Hayday (British Empire), Workers' Vice-President. Mr. H. B. Butler, Director of the International Labour Office, was also in attendance and participated actively in the work of the Conference.

#### Report made by International Labour Office

A Report on Hours of Work and Unemployment had been prepared by the International Labour Office in advance of the Conference, in order to present information as to the action which had been taken already looking to the reduction of hours of work in various countries as a means of spreading employment. Different chapters of this report dealt successively with the present situation with regard to the problem of reduction of hours of work; the possibilities of creating further employment by this means; the many methods of reduction of working hours already in effect; and the action taken by public authorities, by legislative measures, and the experience gained thereby. The final chapter of the report suggested certain lines of international regulation of working hours which might be applied rapidly and effectively in the present circumstances.

#### General Discussion

The Conference opened with a general discussion of the whole problem of working hours which lasted for several days, during which 54 speakers in all participated. This discussion indicated the three points following as the main questions which were involved: (1) Is the reduction of hours of work capable of decreasing unemployment? (2) Is such a reduction necessarily contingent upon international agreement being reached? (3) Are there any special conditions which must be considered as indispensable to ensure that reduction in hours of work would be effective,

and in particular is it necessary that the standard of life of the workers should be maintained?

For the workers it was argued that a reduction in working hours should be made to a 40-hour week, accompanied by a readjustment of wages rates to maintain earnings at their present level as a means of diminishing unemployment and adding to purchasing power. The workers demanded recognition of their right to employment, which was for them, they contended, the right to live. Statistics were presented showing that there are about thirty million persons unemployed in the world at the present time—over one-sixth of the world's workers. The view was expressed by the workers that the 40-hour week was not merely a social necessity, but an industrial and economic necessity as well.

For the employers it was contended that such a measure would raise the cost of production, aggravate the existing hindrances to economic revival and so defeat its own object.

The Government delegates, with one or two notable exceptions, were anxious that the practicable and probable effects of reducing hours as a partial remedy for unemployment should be fully explored. The spokesman for the British Government contended, however, that it would be hopeless to attempt, either by the adoption of an international convention or by national legislation, to control wage rates in a way that would prevent earnings from being reduced coincidentally with hours. Apart from technical, economic and other obstacles in the way of an acceptable 40-hour convention, the British Government representative regarded the wages difficulty as being conclusive and advised that the Conference should look to other and more helpful fields of enquiry.

#### **Address by Canadian Government Delegate**

Two members of the Canadian delegation participated in the general discussion of the proposed reduction of working hours, namely, Dr. W. A. Riddell, Government delegate, and Mr. A. R. Goldie, Employers' delegate. Dr. W. A. Riddell observed that Canada was one of the last countries to feel the effects of the economic depression, but that employment, which was at its peak in 1929-30, had now fallen, as in other countries, to a very serious low level. Over a period of years, collective agreements had shown a reduction in the number of normal hours of work until the 44 and 48 hour week had become by far the most common. These normal hours, owing to business depression, had now become the maximum, and while there was no accurate information on the subject, many persons

thought that more than 50 per cent of the workers are unable at present to obtain the normal hours of work; in fact, short time was rapidly becoming the rule. Employers, wishing to keep their labour forces together as far as possible, were trying to spread the available work, and employees, willing to share with their fellows, had in many cases consented to this being done—often, it must be said, with very considerable sacrifices in earnings. Canada, however, had not required the pressure of world opinion embodied in an international convention to bring about the spread in work, the economic pressure at home having been sufficient to do this. The Canadian Government, however, because of the deep interest which it takes in measures to remedy the appalling existing unemployment, both at home and throughout the world, had viewed with sympathy the calling of this Preparatory Conference. It was only fair to say, however, that according to the constitution in Canada, the federal government was almost powerless to carry out any conclusions which might be arrived at either by the Preparatory Conference or by a General Conference, since the regulation of hours of work in Canada, except as regards Dominion works and undertakings, is solely within provincial jurisdiction. Within the limits of its competence, the Federal Government had put into effect the provisions of the Washington Hours Convention (limiting hours of work in industrial undertakings to eight a day) and the measures taken in this connection had been fully reported in the publications of the International Labour Office.

The gravity of the unemployment situation had been stressed again and again in this Conference, and Dr. Riddell observed that he would be the last person to think that it had been over emphasized. At the same time he thought it was well to recognize that this Preparatory Conference could do very little to increase the volume of employment. The preparatory work for the accomplishment of that task—that is, increasing the volume of employment—had been entrusted to another group of experts who were in session at this time engaged in arranging for the forthcoming world Monetary and Economic Conference. The problem before the Preparatory Conference was that of devising means for extending employment to a larger number of persons by shortening the hours of those already at work. Like certain other Government representatives who had spoken, Dr. Riddell felt himself at a loss to see how it was possible, with any prospect of success, to incorporate wage provisions in an international agreement regarding the shortening of hours.

Personally, he thought that gains resulting to the workers from the recognition of a forty-hour week would ultimately more than offset any loss in wages which might result from an international agreement regarding hours. In this time of world depression it was exceedingly difficult to distinguish between unemployment due to the depression and unemployment which might be attributable to technical progress. The International Labour Office had been collecting the material available on this problem for some time past. It was still a question, however, which would require much research before there would appear to be a sufficient basis of fact to warrant national and international action. Sufficient information, however, was available already to make it impossible to ignore the problem any longer. If technical progress does lessen opportunities for employment, individual hours will have to be shortened so that the burden of the work of the world will be more equally distributed; for it is not likely that any plan will long be considered satisfactory which does not provide for every man a share in his country's work.

Just as previous International Labour Conferences had emphasized the necessity of protecting the individual from over-work, so the present Preparatory Conference would give a new emphasis to the right of every man to an equitable share in the world's work. This, indeed, would be its chief contribution, irrespective of whether or not an international agreement was reached with regard to shorter hours. The Canadian Government, through its delegate, would continue to co-operate in this Conference, Dr. Riddell declared, hoping that some constructive help might thereby be obtained.

#### Address by Canadian Employers' Delegate

Mr. A. R. Goldie declared that Canada, like all other countries, had felt the world-wide depression in a distressing degree. Owing to climatic conditions there was always a considerable amount of seasonal work in Canada, such as farming, fishing, building and road-making, with the result that many of the workers in these trades were necessarily unemployed during the winter months; but over and above these there were many others unemployed, variously estimated as from six to seven hundred thousand. The decline in trade had gone on in Canada at different rates in different industries. For instance, many of the textile mills, the artificial silk or rayon mills, and the makers of the cheaper class of shoes, and others, had not felt the decline in trade as much as other industries. Their

ability to keep going had thus helped the situation materially.

In most industries, the decline in trade had been gradual and to take care of the situation as far as possible the policy had been generally adopted of spreading the work over as large a number of persons as possible; that is to say, hours of work had been decreased in preference to dismissing workers. This policy had been advocated by the Canadian Manufacturers Association and urged upon its members, and it had all been done voluntarily on the part of the employers. In most cases the short time had been paid for at the regular hourly rates, without any attempt to preserve the same weekly wage. While this undoubtedly involved a sacrifice on the part of the workers, it had in general been accepted in a good spirit, with the knowledge that the revenues of the factory and the employer had also been seriously reduced. Unfortunately, at the present time many plants were forced to work both short time and with depleted staffs, owing to lack of orders. In Canada, while there are many large, highly organized factories, in some of which operations were continuous, the greater number were comparatively small and often located in small towns and cities where the available supply of workers in any particular trade is limited. It is in places such as these that agreements to provide a 40-hour week for the workers, while the factory itself is operated for longer hours, would be particularly difficult, if not impossible, to apply. In these smaller plants, it was very necessary to retain key men with a thorough knowledge of the company's business and the customers' requirements and similar information which could only be acquired through long experience, even though the available work was barely adequate to provide subsistence for all the employees. This reduced the chance of engaging inexperienced men.

The proposal had been made in the Preparatory Conference that the shortening of working hours should be accompanied by a corresponding adjustment of wages rates. This would, however, increase the cost of manufacture and the selling price; it would tend also to reduce sales and thus cause more unemployment. While increasing the purchasing power of those directly interested, it would reduce that of others. This policy would have a more serious effect in Canada, where wages are higher than in Europe.

The present Conference had been called to consider the reduction of unemployment by means of the establishment of a 40-hour week. Mr. Goldie submitted that, as regards Canada,

this policy would not do at present for the following reasons:—

"First, most of the factories are already working fewer hours than forty, and therefore could not take on more workers unless orders increased.

"Second, if those factories working more than forty hours were compelled to reduce the hours, the result would be either lower purchasing power for the workers or increased cost of manufacture, both of which would increase rather than decrease unemployment.

"Third, the world is in a state of turmoil; no one really knows what is the matter nor what is the cure. This is therefore an inopportune time to burden industry with further compulsory regulations.

"Fourth, it would not provide more work, which is what the factories need. They are unemployed just the same as workers are unemployed. The workers are idle through no fault of their own and the factories in the same way are idle throughout no fault of their own. The cure for this condition does seem to be in hands other than those of either worker or employer. What the unemployed plant wants is work just the same as the unemployed worker."

As regards the future effect of a maximum 40-hour week, it was difficult to say. Undoubtedly, improvement in trade when it does come will not appear uniformly in all classes of industry and it would seem unwise to hamper those industries which do take care of their full number of workers with restrictive regulations. Mr. Goldie thought that recovery would be more rapid and complete if each industry were left free to work out its own solution, with the general understanding that work would be spread over as many workers as possible. The Preparatory Conference was faced with a hard and perplexing problem which seemed to have many angles but only two sides, and in the solution of which the utmost faith and understanding were needed.

### Decisions of Conference

At the conclusion of the general discussion, the Conference voted on a number of individual proposals which had been formulated by the International Labour Office in its Report on Hours of Work and Unemployment, above referred to, looking to concerted international action for the reduction of hours of work as a means of overcoming unemployment. The employers' group in a collective declaration made at the close of the Conference, expressed their opposition to the proposals which had been under consideration and dissociated themselves from the decisions which had been taken by the other groups, being of opinion that the discussion had only served to demonstrate that it was a practical impossibility to continue further with the suggestions for international action which had been put forward.

Notwithstanding the attitude of the employers' group, a report was agreed upon by the other delegates in attendance, the text of which is appended to the present article.

### Conference Report Considered by Governing Body

The report of the Preparatory Conference in question was communicated to the Governing Body of the International Labour Office at a meeting held in Geneva on February 2. It was decided by the Governing Body at this meeting that the report of the Preparatory Conference should be communicated to the Governments of the member countries of the International Labour Organization, with a request for any observations which the latter might desire to make, and that the International Labour Office, on receipt of the replies of the various Governments, should prepare a draft convention for the consideration of the whole subject at the annual session of the International Labour Conference, which is to open in Geneva on June 8.

## REPORT OF THE TRIPARTITE PREPARATORY CONFERENCE ON THE REDUCTION OF HOURS OF WORK

### I

At its Sixteenth Session (1932) the International Labour Conference, consisting of 148 delegates, adopted by 48 votes to 37 a resolution proposed by Mr. Jouhaux, French Workers' delegate, inviting "the Governing Body of the International Labour Office to investigate the question of the legal institution of the forty-hour week in all industrial countries with a view to the early adoption of international regulations on the subject."

Before the Governing Body of the International Labour Office could consider the effect

to be given to that resolution, Mr. de Michelis, Italian Government representative on the Governing Body, in a letter dated July 25, 1932, addressed to the Chairman of the Governing Body, requested that a special session of the Governing Body should be convened to consider the adoption of an emergency procedure with a view to exploring the possibility of framing proposals, capable of immediate application, on the question of the reduction of hours of work internationally as a means of combating unemployment.

As a result, the Governing Body held a special meeting in Geneva in September, 1932,

and decided by 16 votes to 6 to submit the technical problems concerning the reduction of hours of work to a Tripartite Preparatory Conference to be held in January, 1933, at Geneva. It was also decided that the conclusions of the Tripartite Preparatory Conference should be submitted to the Governing Body of the International Labour Office at its January Session in order that it might consider the desirability of communicating them to the forthcoming World Economic Conference and perhaps also to the Governments. It was understood that the discussions of the Tripartite Preparatory Conference would cover industry as a whole, including mines, and also the hours of work of salaried employees, but that maritime work and agriculture should be excluded.

At its Sixtieth Session (Madrid, October, 1932), the Governing Body decided by 16 votes to 6 to place on the agenda of the Seventeenth Session of the International Labour Conference which will meet on May 31, 1933, the following question: "The reduction of hours of work—Report of the Tripartite Preparatory Conference." Finally it was decided that the Director should approach the Governments of the industrial countries which were not Members of the International Labour Organization with a view, if possible, to obtaining their participation in the work of the Conference.

As a result of the decisions taken by the Governing Body, the International Labour Office invited the States Members of the organization to take part in the Tripartite Preparatory Conference, the date of which had been fixed for January 10, 1933, and to send representative delegations composed of one delegate each from Government, employers and workers, the latter to be chosen, in the spirit of Part XIII of the Treaty of Versailles, in agreement with the most representative employers' and workers' organizations respectively. At the same time, the Governments were empowered to nominate advisers to be attached to each delegate.

The Office also approached the Governments of the United States, the U.S.S.R. and Egypt with a view to considering the conditions under which they might possibly participate in the work of the Tripartite Preparatory Conference.

The Tripartite Preparatory Conference thus summoned to study the possibilities of finding a remedy for unemployment by the reduction of hours of work met in Geneva on January 10, 1933.

Of the 58 States Members of the Organization, 35 States were represented: Of these the following 19 were represented by complete tripartite delegations: Austria, Belgium, Great Britain, Canada, Czechoslovakia, Denmark, France, Germany, Italy, Japan, Luxembourg, Netherlands, Poland, Portugal, Rumania, Spain, Sweden, Switzerland and Yugoslavia. Norway was represented by one Government delegate and one employers' delegate, and the following 15 States were represented by Government delegates only: Albania, Brazil, Bulgaria, Chile, China, Cuba, Finland, Hungary, India, Irish Free State, Latvia, Mexico, Persia, South Africa and Turkey. The Dominican Republic was represented by an observer. Some countries explained their inability to attend or to send a complete delegation owing to want of time or to financial considerations. The total number of delegates entitled to vote was 74.

As regards the non-Member States, Egypt sent a Government observer. The Government

of the United States, while not nominating a delegation, instructed its Consul in Geneva closely to follow the work of the Conference and submit a report upon its results. The Government of the U.S.S.R. announced that it would have been willing to take part in the Conference if the date of the meeting had coincided with that of the Economic Conference.

Seventy-two advisers attended the Conference, which, including the deputy delegates and substitutes, comprised 162 persons. A complete list of the delegations will be found in an appendix.

The Conference appointed as its President Mr. Mahaim, Belgian Government delegate, Member of the Governing Body of the International Labour Office. It also nominated Sir Atul Chatterjee (India) as Government Vice-President, Mr. Oersted (Denmark) as employers' Vice-President, and Mr. Hayday (British Empire) as workers' Vice-President. It decided that in addition to its President and three Vice-Presidents, its Officers should consist of the three members of the Governing Body nominated by the latter to represent it at the Tripartite Preparatory Conference, together with their substitutes. Of these three members, Mr. Mahaim and Mr. Oersted, who had already been appointed by the Conference, had as their substitutes, Mr. Yoshisaka (Japan) and Mr. Forbes Watson (British Empire); the substitute for Mr. Jouhaux (France) was Mr. Schürch (Switzerland).

The Officers were instructed to consider and submit proposals to the Conference on all questions concerning procedure which might arise during the course of its work.

The Conference adopted as its Standing Orders, with a certain number of modifications, the Standing Orders provisionally applied in the Committees of the Conference at its Sixteenth Session.

## II

After having been constituted in this manner, the Conference decided in the first instance to take as a basis of its work the report which, in accordance with the decision of the Governing Body of the International Labour Office, had been prepared by the Office, and including the series of questions drawn up by the Office in the conclusion of this report, the submission of which to the Conference had been agreed to by the three delegates appointed by the Governing Body to represent it at the Conference. The first group of questions related to the possibility and desirability of finding a solution to the problem laid before the Conference, namely, whether a concerted reduction of hours of work could to a certain extent diminish the volume of unemployment either immediately or when even a partial economic recovery occurred. A detailed general discussion, which lasted for several days, took place upon the whole problem. There were fifty-four speakers, not including those who intervened in order to submit, support or discuss the resolutions which were voted upon as a conclusion to the general discussion.

From the outset of the discussion it appeared that the whole Conference was agreed upon the fact that unemployment had at the present moment reached so serious a stage that every effort should be made to find effective remedies as quickly as possible. When, however, the Conference came to consider the question whether the reduction of hours of work was a means calculated to decrease unemployment, divergent opinions were expressed.

The argument in favour of the reduction of hours of work as a remedy for unemployment was put forward by members of the workers' group and by the representatives of certain Governments.

In submitting that argument the workers' group stated that they considered the principle of the maintenance of earnings as an essential condition of the proposed measure since the present depression was fundamentally due to under-consumption. In their view the workers had already, as the fact of unemployment indicated, borne the cost of rationalization in industry and they could not admit that still further sacrifices should be demanded of them.

In favour of the reduction of hours of work the following reasons were put forward by members of the workers' group:—

Opportunities of employment should be given to the greatest number of workers in order to enable them to earn a livelihood for themselves and their dependents.

In particular the youth should be enabled to take their place in the community and thus avoid the demoralization resulting from unemployment.

The present unemployment involves serious financial burdens upon the States which endanger the equilibrium of national budgets and create the risk of dangerous inflation.

Unemployment leads to a serious reduction in the purchasing power of the mass of consumers which diminishes the possibilities of the distribution of industrial and agricultural products, thus maintaining and even increasing the present economic instability which in its turn generates unemployment.

General financial and economic remedies the value of which is not disputed could not produce sufficiently rapid and extensive results to afford a complete solution of the unemployment problem.

The reduction of hours of work would certainly contribute to the stabilization of wholesale prices and thus to the final removal of the depression while at the same time helping to produce the same result by increasing the number of wage-earners and consumers, provided that the standard of life were everywhere maintained.

In any case general economic remedies would leave untouched technological unemployment, the existence of which cannot be denied and for which the reduction of hours of work is the only remedy.

In view of the reorganization of industry which has taken place during recent years mainly as the result of rationalization and mechanization, the capacity of industry to readapt itself to a reduced working week, and to overcome the technical difficulties which might arise, cannot be doubted.

While causing an increase of consumption, the 40-hour week would, owing to the increase in productivity, still ensure sufficient production and would at the same time give the workers increased leisure to profit by that production.

A reduction of hours of work would promote the conclusion of new collective agreements and would not prove an obstacle to the adaptation of existing agreements.

It was also pointed out by some Governments and workers' delegates that the possible increase in costs which might result from the reduction of hours of work would, in virtue of the dynamic nature of economic

development be offset (a) by the increase in the purchasing power of the workers (which would not necessarily be accompanied by a decrease in the purchasing power of other classes of society); (b) by the decrease in the overhead charges per unit of production, since the number of units would be increased by the revival of economic activity; (c) by the decrease and perhaps the disappearance of social charges represented by unemployment benefit.

As a consequence production could well bear an increase in wages costs.

Moreover, in contesting certain objections put forward by the employers, which are referred to below, the workers' representatives stated:

That no value should be attributed to the theory according to which the percentage of labour costs entering into the cost of any given commodity should be determined by adding these various percentages at every stage of production, as this does not take into account the other factors which determine sale prices of the commodities at the different stages of production.

The following objections to the reduction of hours of work were put forward by employers' representatives:

The proposed measure is not a matter of voluntary short time as already practised in many countries, but of a general compulsory limitation of hours of work.

The reduction of hours of work accompanied by an increase of hourly rates would entail a considerable increase in production costs and selling prices, which would result in a fall in demand calculated to produce fresh unemployment.

It is necessary when estimating the share of wages, salaries and social charges in the cost of production (and consequently the incidence of the rise in labour costs on the price level) to take into account all the expenses of this nature which are involved in the production of a given commodity in all its stages of production and distribution where this measure would have effect, and each of these items of labour costs should be allotted its relative importance in the product in question.

The maintenance of weekly earnings would lead directly to dangerous inflation.

If earnings were reduced in the same proportion as hours of work, so as to leave the aggregate wages bill at its present level, no general increase of purchasing power would result, and even in that case production costs would be increased.

An increase in costs of production in industry would further reduce the demand for industrial products by the agricultural population. In view of the fact that the purchasing power of the latter is already greatly reduced, the disequilibrium between industry and agriculture would be still further increased.

The increase in the aggregate purchasing power of the workers which might result from the employment of a greater number of wage earners and the maintenance of wages would be counter-balanced by a decrease in the purchasing power of other classes of the population, so that in the end the total demand for industrial products would not be increased.

For various reasons, such as the impossibility of instituting a rotation system in small establishments and the fact that many under-

takings at present are only working 40 hours or even less, the compulsory reduction of hours of work would have little or no effect in creating further employment.

Technical difficulties varying in importance according to countries, such as the adaptation of the unemployed to new work requiring their technical reeducation, the increase of the technical staff required for supervision and management, lack of factory space and plant, difficulty of obtaining the skilled workers required, transference of workers from one place to another giving rise to objections on their part, and housing difficulties, would in many cases prevent the employment of a greater number of workers.

In countries where it is the custom to regulate hours, wages and conditions of work by means of collective agreements, the compulsory reduction of hours of work would to a large extent abrogate these agreements and would thus introduce serious elements of unrest in industry.

The compulsory reduction of hours of work would artificially accentuate mechanization in order to offset the loss of production and the rise in production costs and might thus become a cause of further unemployment.

The difference in the extent to which the reduction of hours of work would affect the cost of production and sale price of industrial goods in various countries, owing particularly to the inequalities already existing at the outset in respect of wages, standards of living, population factors, economic conditions, and so forth, would increase the disparity between the competitive power of various countries, tend to exaggerate economic nationalism and would result in further hindrances to international trade.

A new uniform and compulsory general regulation would deprive industry of its necessary elasticity, hinder the adaptation to present conditions, and run counter to all chances of revival.

Any solution must be international and previous experience shows the inability of the International Labour Organization to provide an international instrument on hours of work, which means the same thing to and for all countries; or which would be ratified and effectively applied by all States Members; further any such instrument would not apply to States outside the Organization; and moreover, uniformity of hours of work unaccompanied by uniformity of wages and other conditions cannot provide international equality.

The effective solution for the unemployment problem can only be found in the remedies for the general financial and economic difficulties which the World Conference will be called upon to consider.

The Government delegates did not express a unanimous opinion. Certain arguments put forward by the members of the Workers' Group were also advanced or supported by Government delegates.

The majority of Government delegates who took part in the discussion were of opinion that the question of the reduction of hours of work as a remedy for unemployment deserved the most serious consideration.

In general they declared themselves more or less definitely in favour of action by the International Labour Organization, which would lead to a reduction of hours of work as a remedy for unemployment.

Several, however, made various reservations concerning such points as the duration of the proposed regulation of hours and its scope.

They laid particular stress upon the necessity of the Convention which may be drawn up being ratified and conscientiously enforced by all competing countries, and above all by a sufficient number of the great European and overseas industrial countries. One delegate even considered that the Draft Convention should lay down that the obligations devolving upon the States which ratified it would only become operative if that condition were fulfilled.

On the whole, they considered that the question of wages should not be dealt with in a Convention, since it would be difficult to draw up an effective international agreement on this point. They were, however, of opinion that the reduction of hours of work should as far as possible be accompanied by the maintenance of the standard of life.

Whilst recognizing these as very real difficulties, they nevertheless considered that it was desirable to undertake as thoroughgoing an examination as possible of the problems raised by the reduction of hours of work, since they considered that the methods of application might prove a means of solving these difficulties.

Certain delegates from overseas countries expressed their regret that, owing to the short limit of time, they were not able to take an active part in the debates in the Conference, and also desired that due consideration should be given to the state of industrialization, experience and public opinion prevailing in different countries.

One Government representative suggested that the economic aspects of the question should be subjected to further enquiry.

The British Government delegate stated that his Government considered that the question of the compulsory limitation of hours of work to forty a week had not yet been sufficiently examined to warrant a definite conclusion being reached, and that therefore his Government were opposed to proceeding at the present time with the project of a Draft Convention. He pressed for a comprehensive enquiry into the whole question before any definite action is taken.

The general discussion showed that the main questions with which the Conference was faced were covered by the following points:—

1. Is the reduction of hours of work capable of decreasing unemployment?
2. Is such a reduction necessarily contingent upon international agreement being reached?
3. Are there any special conditions which must be considered as indispensable to ensure that that reduction in hours of work would be effective, and in particular is it necessary that the standard of life of the workers should be maintained?

These conditions were set forth in two draft resolutions submitted to the Conference, one by the workers' group, the other by the Government Delegates of France, Belgium, Netherlands, Spain, Chile, Germany and Italy. The draft resolution submitted by the workers' group was as follows:—

"The Conference considers—

That discussion on the project of a 40-hour week Convention should proceed on the basis that weekly wages and monthly salaries will

not be reduced by reason of the reduction of hours resulting from the adoption and application of such Convention."

The draft resolution submitted by the seven Government Delegates referred to above read: "The Conference—

after reviewing the various arguments advanced for and against a reduction of working hours, considers that it is one of the measures which would contribute to reducing unemployment.

The Conference therefore decides to examine its detailed aspects, taking the questions raised in Part II of the conclusion of the Report of the Office as the basis of its examination, in order to reach an arrangement of an international character the methods of giving effect to which would be determined with a view to rendering possible the maintenance of the standard of life of the wage-earners."

The workers' resolution was put to the vote first and was rejected by 32 votes (12 Government delegates and 20 employers' delegates) against 21 votes (2 Government delegates and 19 workers' delegates) and 17 abstentions.

The workers' group then made the following statement:—

"We shall vote in favour of the resolution submitted by the Government delegates because it contains the principle which was at the basis of the workers' resolution.

"If, as we hope, that resolution is adopted, we are convinced that the work of the International Labour Office which will complete the work of the present Conference will be carried out along the lines indicated not only in the workers' resolution but also in that submitted by the Government delegates."

In order to confirm and strengthen that statement, the British workers' delegate made the following statement:—

"The British workers would have preferred the clearer language of the Workers' Resolution, but as two Governments, in response to the direct questions put to them yesterday, have said that there is no vital difference of intention or principle, but only of phraseology, between the Workers' Resolution and that of the Governments, on that understanding—while keeping ourselves free to decide what our action shall be in June when we see the actual terms in which the draft international measure is presented—we have decided to vote for the Governments' Resolution."

The employers' group stated that its attitude had been determined with regard to the terms of the resolution itself and not with regard to the interpretations put upon it by certain members of the Conference.

The Italian employers' representatives, whilst calling attention to the technical difficulties of such a regulation, nevertheless considered that the social and political aspects of the question called for its further serious examination and on those grounds made a statement to explain his vote.

The resolution submitted by the 7 Government Delegates was adopted by 41 votes (21 Government delegates, 19 workers' delegates and 1 employers' delegate), against 22 votes (3 Government delegates, 19 employers) and 7 abstentions.

After the vote was taken the employers' group made the following statement:—

"The employers' group has carefully considered its position as the result of the votes

which have just been taken. We have already announced that we are profoundly convinced that the proposals which you are now about to discuss are impracticable and provide no remedy for unemployment. The issues which we raised are fundamental. In the situation created by the adoption of the resolution it would have been open to us to dissociate ourselves immediately from this Conference. We know, however, how liable such action would have been to misunderstanding and misrepresentation, and in so far as we may continue to be associated with this Conference, our attitude is governed by a desire to avoid such misunderstanding and such misrepresentation. We feel, however, that in the circumstances we must make it clear that our attitude of opposition is unchanged and our presence in no way prejudices the question of our further action in the matter."

Before passing on to the consideration of the questions contained in Part II of the conclusions of the Report of the International Labour Office in accordance with the resolution which had been adopted, the Conference had to discuss the following statement made by the workers' group concerning the extension to agriculture of the proposed regulation:—

"The Workers' Group of the Preparatory Conference has noted with great regret that, in the discussions on the question of the limitation of working hours, agriculture is from the outset excluded.

"The Workers' Group strongly protests against the exclusion of agriculture in dealing with questions of this importance.

"The Workers' Group notes that since the International Labour Conference, at its Third Session in 1921, adjourned the question of the regulation of hours of work in agriculture, no further mention has been made of this question for more than a decade.

"The Workers' Group notes that rationalization and the crisis is bringing about ever-increasing unemployment in agriculture, as in other industries, and is convinced of the absolute necessity of a limitation of the over-long working hours of agricultural workers.

"The Workers' Group therefore requests the Conference to recommend to the Governing Body of the International Labour Office that it should ask the International Labour Office to initiate an immediate enquiry into working hours in agriculture with the object of bringing about as soon as is any way possible an International Convention on the regulation and limitation of working hours in agriculture."

It will be remembered that, in accordance with the decision taken by the Governing Body on September 22, 1932, agriculture had not been included in the scope of the work of the Conference.

The question whether the Conference was competent to transmit this statement to the International Labour Office was raised by an employers' representative and was negatived by 33 votes to 19. After a discussion the Conference adopted by 33 votes to 19 the following resolution submitted by the French Government delegate, to which the workers' group had previously given its support:—

"The Conference—

"while recognizing that agriculture is within the competence of the International Labour Organization,

"finds that the question of the reduction of hours of work in agriculture is not within the terms of reference of the present Conference,

"decides to refer the Workers' resolution to the International Labour Office."

The Conference then proceeded to consider the nature of the future international regulations and the provisions which they might contain.

For the sake of clarity in voting, the Conference decided to vote on some of these questions in more definite terms than those used in the Office Report.

The Conference voted on the following questions:—

1. "Should a Convention be aimed at by the International Labour Conference?"

The Conference adopted that proposal by 36 votes to 21 (for: 18 Governments and 18 workers; against: 3 Governments and 18 employers).

The employers' group then announced that it would abstain from voting in future as it was not prepared to take any responsibility in drawing up a Convention.

2. "Is the Conference of the opinion that the Convention should be of short duration and if necessary renewable?"

This proposal obtained 36 votes to 0. (For: 18 Governments and 18 workers).

The quorum was not reached.<sup>1</sup>

3. "Should the Convention be drafted in such a manner as to allow as large a choice of methods in arranging the hours of work as is consistent with the strict observance of the limits fixed by the Convention?"

The Conference adopted this proposal by 40 votes to 0. (For: 21 Governments and 19 workers).

4. Methods of arranging hours of work proposed in the Report of the International Labour Office:—

(a) "Increasing the number of shifts for work which necessarily has to be carried on continuously."

The Conference adopted this text by 37 votes to 0. (For: 18 Governments and 19 workers).

(b) "Adequately arranging shifts for other work carried on by multiple shifts?"

This method obtained 30 votes to 0. (11 Governments and 19 workers). (The quorum was not reached.)

(c) "Reducing weekly hours of work or organizing a rotation system for work carried on in a single shift provided that the necessary measures are taken to prevent abuse and to ensure that the daily and weekly limits fixed by the Washington Convention and the Coal Mines Convention be not exceeded."

The Conference adopted this text by 37 votes to 0. (For: 18 Governments and 19 workers).

(d) "Allowing any other method of reducing hours of work to be applied by means of collective agreements which the public authority recognized as being in conformity with the Convention, on condition that they are communicated to the International Labour Office by the Governments concerned."

This text obtained 33 votes to 0. (For: 14 Governments and 19 workers.) (The quorum was not reached.)

<sup>1</sup> In accordance with the Standing Orders adopted by the Conference the quorum was 37 votes namely half the total number of delegates.

5. "Whether in the opinion of the Governments there should be special provision to meet the needs of transport within the terms of the Convention under the following:—

"A. Railways.

"B. Other transport."

This proposal obtained 27 votes (10 Governments and 17 workers), against 1 (1 Government). (The quorum was not reached.)

6. "Is it desirable to fix a numerical limit of the hours overtime which may be worked?"

The Conference adopted this proposal by 36 votes (17 Governments and 19 workers) to 2 (2 Governments).

7. "Should the Convention provide that the average working week should not exceed 40 hours, subject to such exceptions as the Convention may provide?"

The Conference adopted this proposal by 35 votes (16 Governments and 19 workers) to 2 (2 Governments).

8. "Should special provision be made in the Convention in respect of its application to small establishments?"

This proposal obtained 35 votes to 0 (17 Governments and 18 workers). (The quorum was not reached.)

#### *Possibility of also Applying the Regulation to Commerce and Offices*

On this point the three following texts were submitted to the Conference:—

9. (a) "Inasmuch as the shortening of the hours of work should apply not only to industrial undertakings but also to commercial establishments and offices, should they both be included in a single Convention or would it be preferable to adopt two Conventions, one concerning industrial undertakings and the other concerning commercial establishments and offices?"

This proposal obtained 22 votes to 0 (4 Governments and 18 workers). (The quorum was not reached.)

(b) "Should the international regulations apply not only to industrial undertakings but also to commerce and offices as covered by the Conventions referred to under II, 1?"

"If so, should not the regulations applying to commerce and offices form the subject of a special Convention?"

This proposal obtained 26 votes (9 Governments and 17 workers) to 1 (1 Government). (The quorum was not reached.)

(c) "Should the Draft Convention apply not only to industrial undertakings but also to commerce and offices as covered by the Conventions referred to under II, 1?"

This proposal obtained 24 votes to 0 (9 Governments and 15 workers). (The quorum was not reached.)

10. "In any case, in whatever form the scheme of regulation adopted for reducing hours of work might be embodied, should a recommendation concerning the standard of living of the workers and wages be considered?"

The Conference adopted this proposal by 32 votes for (13 Governments and 19 workers), against 19 (3 Governments and 16 employers).

11. "In view of the spread of technological unemployment, on which there is a lack of definite information, should some provision be considered for ensuring regular transmission to the International Labour Office by Governments of information on this subject, drawn up as far as possible on a uniform plan?"

The Conference adopted this proposal by 41 votes (21 Governments, 19 workers and 1 employer) to 1 (1 Government).

The Conference thus terminated its examination of the questions set forth in Part II of the Report of the International Labour Office.

The Employers' Group then made the following declaration:—

"At the close of the general discussion before the Conference proceeded to consider the conclusions in the report of the International Labour Office, we pointed out clearly to the Conference that nothing had taken place which led us to change our attitude of complete opposition to the proposals submitted to the Conference."

## STATE LEGISLATION FOR UNEMPLOYMENT RELIEF IN UNITED STATES

THE United States Department of Commerce recently published a report from the President's Organization on Unemployment Relief describing the provisions made for such relief by legislation in the different States from January 1, 1931 to May 31, 1932. Such legislation has been enacted for the purpose of supplementing local resources with direct advances from State funds. The report states certain principles dictated by the experience gained during the depression.

Most of the States, it is reported, have placed the administration of emergency relief in the hands of a special State body handling this problem only. They have shown that they desired a board which (a) is acquainted with relief needs and methods, (b) knows or can learn local financial resources, and (c) has adequate powers to administer State aid or to supervise local relief administration or to do both. In this emergency, several States have secured volunteer service of high quality by appointing unpaid commissions containing, and in some States consisting entirely of, prominent private citizens, familiar with the relief problem. These commissions have appointed paid staffs with experience in relief work to assist them.

Bonds, new taxes, diversion of present taxes to relief—these are the chief sources of funds used. Some States have felt that the use of bonds to meet current expenses is justifiable in the emergency. Others have recognized the possibility that relief needs may continue as a current expense for some time, and consequently have arranged to carry part or all of the State aid on taxes. Since the burden of local relief is borne chiefly by taxes on land and since land values have fallen off heavily, some States have turned to other tax resources, and have thought it wise to divert to relief part of the present tax income hitherto devoted to other purposes. So far as possible, funds for State aid are generally sought from sources which (a) do not mortgage the future too far, (b) do not overburden any single group of taxpayers, and (c) do not increase the total tax load too greatly.

Experience in some States shows that local government units sometimes try to shift the cost of regular public works to work relief budgets. Local units may also seek to use for routine local relief the State aid designed for emergency unemployment relief. To meet these dangers, some States require the local unit to match State grants. Other States, give the State relief commission power to supervise expenditures from State grants to avoid shifting of responsibility. All the States use present local machinery of relief administration. Some States permit the use of part of the State funds for added personnel needed by local units to handle the increased load. Devices for preventing duplication and waste in relief are frequently required.

The States have found the following requirements essential: (a) In work relief, that most of the funds be available for wages which will make an equal amount of direct relief unnecessary; (b) In work relief, that wages reach the most needy unemployed, namely, those whose resources are exhausted and who will require direct relief if they do not get work relief; (c) In direct relief, that individuals share in State aid according to their need. To meet these requirements, some States have limited the amount to be spent on materials in work relief or have specified that work relief shall be spent only on wages which are equivalent to direct relief. Some States, either by law or by rules of the State relief commission, provide that in work relief, as well as in direct relief, there shall be investigation of applications to insure that relief goes to the most needy. That relief should meet urgent necessities, but that the independence and initiative of the individual in seeking work should not be destroyed, has been the aim in all the States. To achieve this aim, several of them have provided that recipients shall work in return for relief given. They have also required a check-up of the needs of the applicants, not merely to have the funds available for the most needy but also to help recipients maintain the habit of self-reliance.

### "The Limitations of Unemployment Insurance"

Further monographs in their Social Insurance Series have been published recently by the Metropolitan Life Insurance Company. The series includes studies of the various voluntary and compulsory social insurance systems in the United States and abroad, including unemployment insurance, sickness and invalidity insurance, and old age pensions (earlier publications in this series were noted in the LABOUR GAZETTE, October, 1931, page 1080; June, 1931, page 646, etc.).

Monograph Six is a study of "the limitations of unemployment insurance," the conclusion being reached that this type of insurance must be supplemented by State aid. It describes the principal methods by which the problem of unemployment protection has been approached in Great Britain, Germany, Denmark, and Switzerland. The example of Great Britain is shown as illustrating a compulsory unemployment insurance plan of national scope, covering about 61 per cent of the working population, which is administered directly by the Government and is supported by contributions from workers, employers, and the National Exchequer. In Germany there is found a national compulsory system, covering 54 per cent of the working population, in which however the administration is largely divorced from direct governmental participation. Here the contributions are limited to the workers and their employers, with public financial assistance granted only as a measure of emergency relief. The system in Denmark is voluntary, with a State subsidy to unemployment benefits administered by trade unions, covering roughly 20 per cent of the working population. In Switzerland, the monograph notes the co-existence of a variety of subsidized compulsory and voluntary provincial and local schemes, within a Federal structure similar to that of the United States, under which plans somewhat less than 19 per cent of the working population is insured.

*International Comparison.*—The monograph concludes with the following international comparison:—

"Of the eighteen foreign countries which have legislation creating or regulating schemes of unemployment insurance, nine have adopted compulsory plans and nine have the voluntary type. Under the voluntary systems the percentage of the gainfully employed population covered by unemployment insurance is in general less than that in countries with

compulsory plans. The more highly industrialized nations usually have a compulsory type of system. Even under the compulsory plans, however, many workers are left unprotected. These people are chiefly in the occupations in which the risk of unemployment is comparatively moderate, such as agriculture and domestic service. In Denmark, some effort to bring agricultural workers into the plan has been made, but the number so covered is only a small proportion of the agricultural workers, as only organized farm labourers can be covered.

"All countries having compulsory schemes require contributions from the employee, the employer, and the State, except Italy, where the Government makes no contribution to the scheme. In Germany, however, the National Government contributes only to the crisis benefits and not to the regular unemployment scheme.

"Under the voluntary schemes the employer is usually exempt from contributions, although in Switzerland the employer contributes to various voluntary employer-employee funds, and in Denmark the employer is nominally required to contribute to a central unemployment fund which is intended to operate as a reserve or emergency fund.

"The unemployment benefit is usually very limited in amount and duration. Those responsible for the adoption of these plans have always maintained that unemployment insurance benefits are to be considered as temporary relief, and intended not as a substitute for wages, but only as a supplement to individual savings.

"During the wholly abnormal flood of unemployment which has come over most industrial nations since 1930, several of the countries having unemployment insurance schemes have had to provide emergency measures of relief, such as employment on public works, special extension of the duration of insurance benefits, and large increases in poor law relief. With the exception of Italy, where the State does not contribute, considerable subsidies have been necessary to provide the present scales of benefit."

Monograph Eight consists mainly of a summary of the evidence taken by the English Royal Commission on Unemployment Insurance (LABOUR GAZETTE, December, 1932, page 1308).

## UNEMPLOYMENT IN CANADA AS REPORTED BY TRADE UNIONS FOR THE YEAR 1932

The Department of Labour receives monthly reports from local trade unions, indicating their membership and the number of members unemployed on the last day of each month, these providing an unemployment gauge for organized workers in Canada from month to month. During the year 1932 an average of 1,793 locals furnished returns to the Department, these embracing a membership average of 171,460 persons, 22.0 per cent of whom were on an average without employment.

The year 1932 has proved to be one of unsettled conditions in industry with a greater unemployment prevalence than in any year since the establishment of our records. The majority of trades and industries suffered curtailment of activity during the year, the building trades particularly showing heavy employment losses. The percentage of idleness for these trades stood at over 55 per cent in each month during the year reviewed which was in excess monthly of that recorded during 1931. As in building, the manufacturing industries showed a higher unemployment level each month than in 1931, the iron and steel trades indicating a considerable slowing up of activity, especially towards the close of the year. Transportation was also somewhat quieter, unemployment, however, showing little variation from month to month. The situation in coal mining fluctuated to a considerable extent, the balance of employment, however, being unfavourable. In

lumbering and logging a somewhat better situation obtained during the early part of the year than in the same period in 1931, but for the remainder of the year employment showed pronounced curtailment. In telegraphic communication, also, a falling off in activity was noted.

There was little change in the situation at the close of January, 1932, from the previous month, the tendency, however, being unfavourable. The February situation showed some improvement over January, renewed activity in the garment trades in Quebec and in Nova Scotia coal mines being a noteworthy factor in this better employment movement. During March the level of activity remained much the same as in the previous month, with a very slight upward tendency, the percentage of inactivity reported for this month and in September resting at 20.4 and representing the minimum of unemployment for the year. Due in a substantial measure to a falling off in activity in the garment and iron and steel trades, the situation in April showed a moderate decline from March. However, continued and steady improvement on a small scale was noted from the close of April until the beginning of October when conditions again became more depressed, extending with somewhat increased impetus until the close of the year when unemployment stood at 25.5, the highest percentage of idleness to be recorded during the year.

## REPORT OF EMPLOYMENT SERVICE OF CANADA FOR THE PERIOD OCTOBER TO DECEMBER, 1932

The work of the Offices of the Employment Service of Canada during the quarter October to December, 1932, indicated less activity for that period than in the corresponding quarter of 1931, as there was shown a loss of 40 per cent in vacancies offered and of 42 per cent in placements effected in regular and casual employment. The loss recorded was due to fewer placements in construction and maintenance, particularly in the highway construction division of that section, although all other groups, except farming and logging, likewise registered declines. In farming, a considerable gain was shown, due to many placements made under the Farm Relief Act. Provincially, the Maritimes, Quebec and Saskatchewan showed gains in vacancies and placements, while Ontario, Manitoba, Alberta and British Columbia registered decreases in each instance. These losses, as in the former comparison, were

largely due, in each province, to fewer placements in construction and maintenance, while the gain in Saskatchewan was attributable to the large number of applicants placed on farms under the Farm Relief Act and the increase in the Maritimes, to additional highway construction sponsored by the government and the various municipalities. The accompanying table gives the vacancies and placements of the Employment Service of Canada by industrial groups in the various provinces during the period, October to December, 1932.

From the chart on page which accompanies the article on the work of the Employment Service for the month of December, 1932, it will be noted that the trend of the curves of vacancies and placements in relation to applications was downward during the month of October and showed little variation for the first part of November, but during the latter

## VACANCIES AND PLACEMENTS OF THE EMPLOYMENT

| Industry                                  | Nova Scotia |            |        | New Brunswick |            |        | Quebec    |            |        | Ontario   |            |        |

half of that month and throughout December, recorded a continuous and marked upward trend. At the end of the quarter, however, the curve of vacancies was nearly 6 points below and that of placements 8 points beneath the levels shown at the close of December, 1931. During the period October to December, 1932, there was a ratio of 48.2 vacancies and 45.9 placements for each 100 applications for employment, as compared with 65.3 vacancies and 63.9 placements during the corresponding quarter of 1931.

The average numbers of positions offered daily during the quarter under review was 1,090; of applications registered 2,261; and of placements effected 1,037; in contrast with the daily average of 1,791 vacancies, 2,741 applications and 1,752 placements in regular and casual employment during the last quarter of 1931.

During the three months October to December, 1932, the offices reported that they had made 83,106 references of persons to posi-

tions and had effected a total of 78,780 placements, of which 38,402 were in regular employment and 40,378 in casual work. Of the placements in regular employment, 28,696 were of men and 9,706 of women, while casual work was found for 32,574 men and 7,804 women. Comparison with the corresponding period in 1931, showed that 134,862 placements were then made, of which 60,182 were in regular employment and 74,680 in casual work. Applications for employment during the period under review were received from 136,526 men

and 35,252 women, a total of 171,778 in contrast with the registration of 211,053 persons during the same period of 1931. Employers notified the Service during October to December, 1932, of 82,790 vacancies, of which 62,497 were for men and 20,293 were for women, as compared with 137,881 opportunities for work during the corresponding period in 1931.

On page of this issue will be found a report, in detail, of the transactions of the Employment Service for the month of December, 1932.

## EMPLOYMENT AND UNEMPLOYMENT IN CANADA IN DECEMBER, 1932

THE following information as to the employment situation in Canada is based upon reports from four sources:—

(1) The Dominion Bureau of Statistics receives reports each month from most of the larger employers of labour throughout Canada in all industries except agriculture, fishing, hunting and highly specialized business, the returns being from firms employing fifteen workers or more. The number of firms so reporting on January 1, was 7,947, the employees on their payrolls numbering 721,308 persons.

(2) The Department of Labour receives reports from local trade unions throughout Canada, showing the number of their members who were unemployed in the period under review. The number of unions reporting for December was 1,764, having an aggregate membership of 155,298 persons. It should be

understood that the report on the number of unemployed workers refers only to organized labour, definite figures not being available as to the number of unorganized workers who were without employment during the period reviewed.

(3) The Department of Labour receives reports from the 66 offices of the Employment Service of Canada showing the number of applications for work, the existing vacancies and the number of workpeople placed in positions.

(4) The Dominion Bureau of Statistics receives each month detailed statistics from 61 cities throughout Canada, showing the value of permits granted during the period for various classes of building construction, these figures indicating the degree of activity prevailing in the building trades.

### (1) Employment Situation at the Beginning of January, 1933, as Reported by Employers

Employment at the beginning of January showed curtailment less than normal for the season, and the decline was on a decidedly smaller scale than that noted on January 1, 1932; the decline during December was also considerably less than the average loss recorded at the opening of preceding years of the record. The Dominion Bureau of Statistics tabulated returns from 7,947 firms whose payrolls declined from 763,561 persons on December 1 to 721,308 at the beginning of January, a decrease of 42,253 persons, or 5½ per cent. Reflecting this contraction, the index (based on the 1926 average employment as 100) stood at 78.5 on January 1, 1933, as compared with 83.2 in the preceding month and 91.6 on January 1, 1932. On the same date in the preceding eleven years, the index was as follows:—1931, 101.7; 1930, 111.2; 1929, 109.1; 1928, 100.7; 1927, 95.9; 1926, 90.7; 1925, 84.9; 1924, 89.8; 1923, 87.3; 1922, 78.8 and 1921, 88.8.

As is usually the case at the beginning of January, the greatest losses on the date under review occurred in manufacturing, construction and transportation, but there were also important reductions in mining and communications; trade in which the tendency on January 1 has very frequently been downward, showed an increase as compared with December 1. Logging also reported a considerably larger number of employees on the date under review. Since the decreases, especially in manufacturing, were in many

cases due to a temporary stoppage of work over the holiday season, and for inventory and plant repairs, it is likely that a partial recovery from these contractions will be shown in the next report.

#### Employment by Economic Areas

All provinces recorded reduced activity; as is customary at the time of year, establishments in Quebec and Ontario laid off the greatest number of workers.

*Maritime Provinces.*—There was a decrease in employment in the Maritime Provinces on January 1; this occurred chiefly in manufacturing and construction, but mining and trade were also slacker. On the other hand, transportation showed seasonal improvement with the opening of the winter ports. Statements were received from 579 firms employing 55,834 persons, compared with 58,387 at the beginning of December. Losses had also been noted on January 1, 1932, but the index was then many points higher.

*Quebec.*—The reduction in Quebec was decidedly smaller than that noted on the same date of last year, but employment was then in greater volume. Manufacturing (notably in iron and steel, pulp and paper, textile, food, leather, lumber and building material plants), construction and transportation reported the most pronounced losses, but the tendency was also downward in mining, while improvement took place in logging and retail trade. In many cases, operations will have

been resumed early in the New Year in the establishments closed down over the holiday season. The labour forces of the 1,954 co-operating employers aggregated 210,166 workers, as against 223,940 on December 1, 1932.

*Ontario.*—Manufacturing showed the greatest curtailment in Ontario, that in iron and steel, food, pulp and paper, textile, rubber and lumber factories being most noteworthy, although there were also important losses in the non-ferrous metal, leather, electrical appliance and other groups. In the non-manufacturing industries, there were large

cember 1. Construction reported especially marked losses, but manufacturing and transportation also showed important curtailment; in addition, communications and wholesale trade were slacker, while logging registered seasonal improvement.

*British Columbia.*—The recessions in British Columbia were on a decidedly smaller scale than those indicated on January 1 of last year; the then index, however, was higher. The 776 firms furnishing data reported 56,733 employees, as against 60,084 in the preceding month. Lumber, vegetable food and non-fer-

### EMPLOYMENT IN CANADA AS REPORTED BY EMPLOYERS

**NOTE.**—The curve is based on the number of employees at work on the first day of the month as indicated by the firms reporting, in comparison with the average number of employees they reported during the calendar year 1926 as 100.

contractions in transportation, mining and construction, and smaller declines in services and communications. Retail trade and logging on the other hand, recorded slightly increased activity. A combined payroll of 295,022 persons was employed by the 3,531 firms whose returns were received and who had 314,694 on their staffs on December 1. This contraction involved the release of approximately the same number of persons as that indicated on January 1, 1932, but the index then was higher.

*Prairie Provinces.*—Declines on a rather smaller scale than at the beginning of January, 1932, were noted in the Prairie Provinces. Statistics were tabulated from 1,108 employers of 103,553 workers, or 2,903 less than on De-

rous metal factories, iron and steel products, logging, trade and construction recorded curtailment, that in the last-named being most pronounced. On the other hand, pulp and paper, transportation and coal mining showed slight improvement.

Index numbers of employment by economic areas are given in Table I.

### Employment by Cities

There were contractions in seven of the eight cities for which separate tabulations are made, firms in Montreal, Quebec, Toronto, Ottawa, Hamilton, Winnipeg and Vancouver reporting reduced employment, while heightened activity was indicated in Windsor and the ad-

jacent Border Cities, where manufacturing especially in iron and steel, showed improvement.

*Montreal.*—The decrease in Montreal involved a smaller number of workers than the decline registered on January 1, 1932, and the index on the date under review was lower. Statements were received from 1,108 establishments with 113,958 employees, as compared with 125,289 in the preceding month. Important declines were shown in transportation, construction and manufacturing, especially in food, textile, leather and iron and steel factories. On the other hand, retail trade was seasonally busier.

*Quebec.*—Manufacturers reported a loss in Quebec City, and transportation and construction also afforded less employment; the 152 co-operating employers reduced their staffs from 11,992 persons on December 1 to 11,569 at the beginning of January. This decline was smaller than that indicated on January 1 of last year, when the index was higher.

*Toronto.*—Toronto firms showed a smaller seasonal contraction than on January 1, 1932, but employment was then in greater volume. There were losses in manufacturing, the most noteworthy being in the textile, metal, food, printing and publishing and electrical apparatus groups; construction and transportation

NOTE.—The "Relative Weight" in Table I, shows the proportion of employees in the indicated area to the total number of all employees reported in Canada on the date under review.

TABLE I.—INDEX NUMBERS OF EMPLOYMENT BY ECONOMIC AREAS

(AVERAGE CALENDAR YEAR 1926=100)

|  | Canada | Maritime<br>Provinces | Quebec | Ontario | Prairie<br>Provinces | British<br>Columbia |
|--|--------|-----------------------|--------|---------|----------------------|---------------------|
| Jan. 1, 1921.....  | 88.8   | 107.6                 | 84.2   | 88.8    | 95.0                 | 76.7                |

| Dec. 1.....  | 99.1   | 112.7                 | 94.7   | 99.3    | 106.0                | 90.5                |
| Jan. 1, 1932.....  | 91.6   | 111.1                 | 86.3   | 93.8    | 92.8                 | 80.6                |
| Feb. 1.....  | 89.7   | 99.9                  | 85.9   | 92.7    | 91.3                 | 77.5                |
| Mar. 1.....  | 88.7   | 93.1                  | 86.5   | 91.8    | 88.2                 | 78.7                |
| Apr. 1.....  | 87.5   | 88.3                  | 85.0   | 91.1    | 86.1                 | 80.9                |
| May 1.....   | 87.5   | 87.8                  | 86.0   | 89.5    | 87.6                 | 82.7                |
| June 1.....  | 89.1   | 96.4                  | 87.8   | 89.9    | 89.3                 | 83.7                |
| July 1.....  | 88.7   | 96.4                  | 86.6   | 89.2    | 90.5                 | 83.7                |
| Aug. 1.....  | 86.3   | 90.1                  | 84.4   | 86.9    | 90.1                 | 81.4                |
| Sept. 1.....   | 86.0   | 87.8                  | 85.3   | 85.1    | 91.6                 | 82.8                |
| Oct. 1.....  | 86.7   | 84.9                  | 85.8   | 86.1    | 94.6                 | 82.1                |
| Nov. 1.....  | 84.7   | 86.8                  | 83.6   | 84.2    | 91.6                 | 77.8                |
| Dec. 1.....  | 83.2   | 83.8                  | 82.9   | 84.1    | 86.7                 | 73.8                |
| Jan. 1, 1933.....  | 78.5   | 80.1                  | 77.8   | 78.8    | 84.4                 | 69.7                |
| Relative Weight of Employment by Economic<br>Areas as at Jan. 1, 1933..... | 100.0  | 7.7                   | 29.1   | 40.9    | 14.4                 | 7.9                 |

were also slacker, but retail trade reported considerable improvement. Returns were tabulated from 1,196 employers with 103,626 workers, compared with 109,024 in their last report.

*Ottawa.*—Manufacturing and construction registered seasonal curtailment, and transportation also afforded less employment. The working forces of the 157 reporting establishments aggregated 10,936 persons, or 789 fewer than at the beginning of December. This reduction involved rather more employees than that recorded on the same date of last year, when industrial activity was greater.

*Hamilton.*—Data were received from 235 firms in Hamilton employing 22,198 workers, as against 24,096 on December 1. Manufac-

turing and transportation showed reduced activity, while highway construction and services reported improvement. The declines noted on January 1, 1932, were larger but the index was then higher.

*Windsor and the adjacent Border Cities.*—There was a slight increase in the number employed in the Border Cities on January 1, 1933, manufacturing showing an improvement. Returns were compiled from 132 establishments with 8,148 persons in their employ. Activity was less than on January 1, 1932, when a considerable increase had been indicated.

*Winnipeg.*—Factory employment declined in Winnipeg, but construction showed a slight improvement. The 353 co-operating firms reported 33,624 employees, compared with 34,350

**NOTE.**—The "Relative Weight" in Table II shows the proportion of employees in the indicated city to the total number of all employees reported in Canada on the date under review.

TABLE II.—INDEX NUMBERS OF EMPLOYMENT BY PRINCIPAL CITIES

(AVERAGE CALENDAR YEAR 1926=100)

| Relative Weight of employment by Cities as at Jan. 1, 1933..... | 15.8     | 1.6    | 14.4    | 1.5    | 3.1      | 1.1     | 4.6      | 3.5       |

in the preceding month. This reduction did not involve so many workers as that recorded on January 1, 1932, but employment was then more active.

*Vancouver.*—Further reductions took place in Vancouver, according to returns from 341 employers of 25,385 persons, as compared with 26,488 on December 1. A much smaller decrease had been indicated on the same date of last year, and the index then was higher. There were losses in manufacturing, construction and trade on January 1, 1933, as compared with the preceding month, while other groups did not show much change.

Index numbers by cities are given in Table 2.

### Manufacturing

The losses in employment registered by manufacturers were rather smaller than the average decline reported at the beginning of January in the twelve years of the record, except 1925 and 1927, but in spite of this, the index was lower than in any other year since 1925. The most extensive reductions on the date under review were in iron and steel, food, lumber, textile and pulp and paper, but the building material, leather, non-ferrous metal and rubber industries also recorded important curtailment, and smaller losses were indicated in musical instrument, animal products, electrical apparatus, clay, glass and stone and

**NOTE.**—The "Relative Weight" in Table III shows the proportion of employees in the indicated industry to the total number of all employees reported in Canada on the date under review.

TABLE III.—INDEX NUMBERS OF EMPLOYMENT BY INDUSTRIES

(AVERAGE CALENDAR YEAR 1926=100)

|  | All industries | Manufacturing | Logging | Mining | Communications | Transportation | Construction | Services | Trade |
|--|----------------|---------------|---------|--------|----------------|----------------|--------------|----------|-------|
| Jan. 1, 1921.....  | 88.8           | 84.8          | 159.9   | 104.9  | 90.5           | 95.1           | 63.1         | 78.9     | 99.6  |

| Jan. 1, 1933.....  | 78.5           | 74.4          | 74.5    | 96.9   | 87.5           | 78.3           | 32.4         | 102.2    | 119.6 |
| Relative weight of employment by industries, as at Jan. 1, 1933..... | 100.0          | 51.1          | 2.8     | 6.0    | 3.2            | 12.9           | 9.3          | 2.8      | 11.9  |

other factories. As in previous years, the declines so generally reported were largely due to shut-downs for holidays, inventories and repairs, and considerable improvement may be expected in the next report. Statistics for Jan. 1 were compiled from 4,924 manu-

facturers, employing 368,548 operatives, compared with 397,705 on Dec. 1.

*Animal Products, Edible.*—Large reductions were reported in this division, in which all branches showed curtailment, that in meat-preserving plants and dairies being most exten-

TABLE IV.—INDEX NUMBERS OF EMPLOYMENT BY INDUSTRIES (AVERAGE 1926=100)

| Industries                                | Relative weight | Jan. 1, 1933 | Dec. 1, 1932 | Jan. 1, 1932 | Jan. 1, 1931 | Jan. 1, 1930 | Jan. 1, 1929 | Jan. 1, 1928 |

1 The "Relative Weight" column shows the proportion that the number of employees in the indicated industry is of the total number of employees reported in all industries by the firms making returns on the date under review.

sive. Statements were received from 225 manufacturers with 16,732 workers, as compared with 17,278 at the beginning of December. This loss was smaller than that recorded on January 1, 1932, when the index number was some three points higher. All provinces except British Columbia reported reduced employment, but the heaviest contractions were in Ontario.

*Leather Products.*—There was a decline in the leather industries at the beginning of January, particularly in boot and shoe factories. The shrinkage involved a larger number of employees than that noted on the corresponding date last year, and the index was slightly lower. A combined working force of 15,732 persons was registered by the 254 firms making returns, as compared with 17,494 in the preceding month. The greatest losses occurred in Quebec and Ontario.

*Lumber Products.*—Seasonal contractions on a rather larger scale than on January 1, 1932, were noted in lumber mills, 751 of which reduced their payrolls from 25,967 on December 1 to 22,265 workers at the beginning of January. Employment was in smaller volume than on the corresponding date last year. Sawmills registered the most pronounced decreases, but there was also curtailment in furniture, match, container and other wood-using industries. There were especially marked losses in Ontario, although employment generally declined.

*Musical Instruments.*—Thirty-seven manufacturers of musical instruments released 641 persons from their staffs, bringing them to 668 at the beginning of January. Practically all the decrease took place in Quebec and Ontario. A smaller recession had been noted on January 1 a year ago, and the index number was then very much higher.

*Plant Products, Edible.*—There were seasonal reductions in employment in all branches of the vegetable food group, the greatest being in sugar and syrup, canning, biscuit, chocolate and confectionery and flour and cereal factories. The working forces of the 390 co-operating employers totalled 25,146 persons, as compared with 29,282 in their last report. The contractions in Ontario were especially pronounced, although the movement was generally unfavourable. The declines noted at the beginning of January last year were on a rather lower scale, and the index number then was higher than on the date under review.

*Pulp and Paper Products.*—The shrinkage at the beginning of January, 1933, was similar to that noted on the same date in 1932, but employment was then in greater volume. Sta-

tistics were received from 548 firms, whose staffs aggregated 49,319 workers, or 2,318 fewer than in their last report. The most noteworthy losses were in Quebec and Ontario, although the trend was downward in all provinces except British Columbia, where a fair increase was noted. Pulp and paper mills reported a large share of the reduction, but there were also declines in plants producing paper goods and in printing and publishing establishments.

*Rubber Products.*—Rubber factories showed a decrease, which, however, was less than that of January 1, 1932; 41 plants had 9,622 employees on the date under review, as against 10,905 at the beginning of December. The largest losses took place in Ontario. The index number, at 75.6, was lower than in the same month of last year, when it had stood at 82.2.

*Textile Products.*—The 854 textile firms furnishing data released a much larger proportion of their total operatives than was the case among the establishments reporting at the beginning of January, 1932, when the index number was about two points higher than on the date under review. Their payrolls included 74,742 persons on January 1, 1933, as against 81,522 in the last report. Ontario recorded the bulk of the shrinkage, which was especially marked in the hosiery and knit goods, garment and thread, yarn and cloth divisions.

*Tobacco, Distilled and Malt Liquors.*—There was a slight falling-off in employment at the beginning of January in the tobacco and beverage groups, the decline being similar in size to that recorded on January 1 last year, when employment was slightly below its level on the date under review. Statements were tabulated from 153 manufacturers in this group, employing 15,564 workers, or 132 fewer than on December 1. Practically all the loss took place in distilled and malt liquor factories, and largely in Ontario, while in Quebec moderate improvement was noted in the group as a whole.

*Chemical Products.*—Employment in chemical and allied product plants, chiefly in Ontario and Quebec, showed a contraction on January 1, as compared with the preceding month, 386 persons having been released from the labour forces of the 144 reporting establishments, which had 7,524 employees. Greater declines were noted than on the corresponding date a year ago, when the index number was a few points higher.

*Clay, Glass and Stone Products.*—Further recessions in employment occurred in building material works, 184 of which reported an aggregate staff of 5,399, as compared with 5,903

in the preceding month. All provinces shared in this curtailment, which, however, was most marked in Quebec and Ontario. Brick and stone plants recorded important declines; these were, however, smaller than those of January 1, 1932, but employment generally was then in greater volume.

*Electric Current.*—There were large decreases in the number employed in electric current plants, according to statistics from 91 producers, employing 13,310 workers, or 306 fewer than on December 1. Ontario reported the greatest falling-off. The general reduction involved many fewer employees than that indicated at the beginning of January of last year, when the index, however, was higher.

*Electrical Apparatus.*—A further reduction in personnel was registered by the 92 co-operating electrical apparatus factories, whose labour forces aggregated 10,225 persons on January 1, as compared with 10,773 in the preceding month. Employment was in lesser volume than on the same date of 1932; although somewhat larger declines had then been noted.

*Iron and Steel Products.*—Crude, rolled and forged, heating appliance, general plant machinery and sheet metal works reported considerable curtailment; less extensive losses were shown in agricultural implement factories and other divisions of this group, while automobile plants showed a decided increase. The payrolls of the 767 firms furnishing data in the iron and steel group totalled 73,671, against 78,413 employees on December 1. This contraction (which was on a smaller scale than that noted on the corresponding date of last year, when the index was much higher) was most pronounced in Ontario, but the movement was generally downward.

*Non-Ferrous Metal Products.*—The loss recorded in non-ferrous metal products involved a rather smaller number of workers than that indicated on the same date in 1932, when the index was many points higher. Returns were compiled from 131 employers of 11,562 persons, as compared with 12,357 at the commencement of December. The most noteworthy reductions were in Ontario. An analysis of the data by industries shows that the smelting and refining and lead, tin, zinc and copper groups released most of the workers who were laid off.

*Mineral Products.*—Declines were noted in this group, the shrinkage, however, being less than that registered at the beginning of last year. A combined working force of 11,517 persons was employed by the 115 establishments whose returns were received, and who

had 11,807 employees on December 1. The situation was not quite so favourable as on January 1, 1932, although greater curtailment had then been indicated.

### Logging

Logging showed an unusually large increase, as compared with the preceding month, but employment was in less volume than at the beginning of January of most other years for which data are available, the single exception being January of 1932. A combined working force of 20,452 men was reported by the 224 co-operating firms, who had 15,388 employees in the preceding month. Improvement was shown in Quebec and Ontario, that in Quebec being the greater; a slight decrease was noted in the Maritimes and British Columbia.

### Mining

*Coal.*—There was a contraction in coal mines, 89 of which reduced their payrolls from 25,087 persons on December 1, to 24,600 at the beginning of January. A falling-off was shown in the Maritime and Prairie Provinces, while the tendency was favourable in British Columbia. The index number on January 1, 1932, was higher, employment then had also shown a slight reduction from December 1 of the preceding year.

*Metallic Ores.*—A large decrease was noted in metallic ore mines, according to data from 66 firms who employed 15,330 persons at the beginning of January, as compared with 15,812 in the last report. The index was rather lower than on the same date of last year.

*Non-Metallic Minerals (Other than Coal).*—The trend of employment in this division continued seasonally downward, the reductions were on a smaller scale than on January 1 a year ago, but the index was then many points higher. Statements were received from 75 firms employing 3,865 workers, as compared with 4,252 in the preceding month. Quebec recorded the greatest shrinkage.

### Communications

Further losses were reported in telephones and telegraphs; the situation compared favourably with that indicated on the same date in 1932, when decreases were also noted. The payrolls of the companies and branches furnishing data declined from 23,490 on December 1, to 23,014 employees at the beginning of January.

### Transportation

*Street Railways and Cartage.*—Employment in local transportation showed a further seasonal decline, involving fewer workers than that

reported on January 1, 1932, when the index number was some two points lower. A combined staff of 24,240 persons was employed by the 174 co-operating firms, who had 24,701 employees in the preceding month. Of the five economic areas, the Maritimes and Western Provinces showed improvement, while Quebec and Ontario shared the reductions.

*Steam Railways.*—Employment on steam railways showed a decrease involving a smaller number of workers than that indicated on the corresponding date a year ago; the index number then was higher than on the date under review. Improvement in the Maritime Provinces was offset by contractions elsewhere. The payrolls of the 100 companies and divisional superintendents furnishing returns aggregated 56,987 persons, as against 57,979 in their last report.

*Shipping and Stevedoring.*—There was a large seasonal reduction in employment in water transportation, chiefly in Quebec and Ontario, while an increase, also seasonal in character, was noted in the Maritime Provinces. A rather larger number of workers was let out than on January 1, 1932, when the index was a few points higher. Returns for the date under review were compiled from 89 employers of 11,255 men, compared with 16,413 in the preceding month.

### Construction and Maintenance

*Building.*—Continued seasonal curtailment of operations was shown in building construction; 625 contractors reduced their staffs from 14,969 at the beginning of December to 11,865 on January 1. The most pronounced declines were in Quebec, although there were general losses in all provinces. More extensive decreases were indicated on January 1 last year, but the index was then many points higher.

*Highway.*—Statements were received from 319 firms employing 33,815 workers, or 6,454 fewer than on December 1. Road construction was generally maintained at a decidedly lower level than in the winter of 1931-1932,

when the unemployment relief measures then in vogue had provided work for a very much greater number of men. Important losses were indicated in all provinces, that in the Maritime areas being most pronounced.

*Railway.*—A further recession was shown in this division, in which 33 employers reported 21,434 persons on their payroll, as compared with 22,479 in the preceding month. The index was lower than on January 1 of a year ago, although the declines then noted were very considerably larger. Ontario and the Prairie Provinces recorded the bulk of the decrease, while seasonally increased employment was indicated in the Maritime Provinces.

### Services

Reduced activity was registered in the service group, in which 314 firms employed 20,028 persons, or 222 fewer than in the preceding month. Smaller decreases took place at the beginning of January, 1932, when the index was higher.

### Trade

Retail trade afforded greater employment than on December 1, but losses occurred in wholesale establishments. The 832 co-operating employers in the trade group had in the aggregate 85,506 workers, compared with 84,406 in their last report. Employment was at a lower level than on January 1, 1932, although the general tendency was then downward, as on January 1 in most years for which data are available.

### Tables

The accompanying tables give index numbers of employment by economic areas, leading cities and industries. The columns headed "Relative Weight" show the proportion that the number of employees reported in the indicated area or industry is of the total number of employees reported in Canada by the firms making returns on the date indicated.

## (2) Unemployment in Trade Unions at the Close of December, 1932

The term unemployment as used in the following report has reference to involuntary idleness due to economic causes. Persons who are occupied at work outside their own trades or who are idle due to illness are not considered as unemployed while unions involved in industrial disputes are excluded from these tabulations. As the number of unions making returns varies from month to month with consequent variation in the membership upon

which the percentage of unemployment is based, it should be understood that such figures have reference only to the organizations reporting.

Unemployment among local trade unions at the close of December, 1932, established a peak for the year and also since the collection of these records was first undertaken, the percentage of idleness standing at 25.5. This less favourable tendency in December was a cul-

mination of the adverse employment movement shown during October and November when the unemployment percentages were 22.0 and 22.8 respectively. For December, returns were received from a total of 1,764 labour organizations involving 155,298 members, 39,607 of whom were without work on the last day of the month. A lower employment volume was afforded also, than in December, 1931, when 21.1 per cent of idle members were recorded. All provinces reflected a slowing up of activity from November, which was not of particular significance in any one province, the recessions rating from 3.5 per cent in Saskatchewan to percentages of 0.5 and 0.3

Monthly records are kept separately of unemployment in the largest city in each province with the exception of Prince Edward Island. Of these Montreal, Toronto and Vancouver unions recorded the highest percentages of idleness during December, those in the first two cities named representing moderate increases in slackness from November while in the latter city the change was slight though adverse. In Edmonton, employment declined sharply from November, Regina unions also showing a noteworthy drop in activity, while in Saint John fractional recessions only occurred. Employment advancement though slight was apparent in Halifax from Novem-

#### PERCENTAGE OF UNEMPLOYMENT AS REPORTED BY TRADE UNIONS

in Nova Scotia and Manitoba respectively. Building and construction was considerably quieter than in November, especially in Ontario where a substantial falling off in activity was noted. Nova Scotia unions indicated a pronounced gain in employed members from December, 1931, the coal mines of the province accounting largely for the change, though short time work was quite prevalent in the mines. The most extensive losses in activity from December, 1931, were apparent among Ontario unions which showed a large drop in the employment afforded, and in New Brunswick, Alberta and British Columbia also heavy curtailment was noted.

ber, the situation in Winnipeg remaining much the same with a slight tendency upward. Pronounced curtailment was evident among Toronto, Edmonton, Winnipeg, Saint John and Vancouver unions from December, 1931. Declines of lesser importance were reported from Regina, employment for Halifax unions showing a very slight drop. In Montreal the balance of employment was favourable during the month reviewed though the change was merely nominal.

Appearing with this article is a chart which shows the unemployment trend by months from January, 1927, to date. The level of the curve throughout the year 1932 has been

consistently above that shown during 1931, indicating a slowing up of activity during the year just past. The trend in January, 1932, changed but slightly from the previous month, the tendency, however, being upward. During February and March activity as represented by the curve was in somewhat better volume while in April a distinct rise in the course followed by the curve was noted, unemployment in the manufacturing industries accounting largely for the change. Following April a period of

TABLE I.—PERCENTAGES OF UNEMPLOYMENT IN TRADE UNIONS BY PROVINCES

| Month             | N. S. and Prince Edward Island | New Brunswick | Quebec | Ontario | Manitoba | Saskatchewan | Alberta | British Columbia | Canada |
|-------------------|--------------------------------|---------------|--------|---------|----------|--------------|---------|------------------|--------|
| Average 1919..... | 3.1                            | 2.0           | 7.4    | 2.7     | 2.1      | 3.2          | 2.0     | 7.9              | 3.4    |

employment expansion on a smaller scale set in, the curve continuing its downward course until the close of September. In October industrial activity as noted by the curve was again retarded, unemployment continuing more prevalent each month until the close of the year when 25.5 per cent of idleness was reached, the most substantial percentage to be shown throughout the year and since our records were first established. During March and September the best situation for the year prevailed when 20.4 per cent of the members reported were without work.

The situation in the manufacturing industries was less favourable during December than in the preceding month as shown by the reports received from 467 unions covering a membership of 42,017 persons. Of these, 12,145 or a percentage of 28.9 were without work on the last day of the month contrasted with 26.0 per cent in November. Reductions in activity on a noteworthy scale were reflected by garment workers, while among cigar makers and glass workers the percentage declines were quite pronounced though affecting few workers. Among pulp and paper makers, wood workers, and general labourers unemployment showed a moderate increase, the tendency for iron and steel, leather, hat and cap, and brewery workers, and bakers and confectioners being toward lessened activity, though the changes were slight. Textile and fur workers, and metal polishers, on the other hand, showed somewhat improved conditions. In the printing trades the same percentage of idleness was reported in both months compared. Garment workers recorded a decidedly better situation during December than in the corresponding month of 1931 when 23.8 per cent of unemployment was reported in the manufacturing industries as a whole, and employment for general labourers, leather and brewery workers, and bakers and confectioners also tended upward. Slackness in the remaining trades, however, considerably outweighed this expansion, the iron and steel trades particularly showing extensive losses in activity, pulp and paper makers, the printing trades, textile, hat and cap, and glass workers, metal polishers, and cigarmakers also recording a considerably greater unemployment prevalence than in December, 1931.

Coal miners with 45 unions embracing a membership of 13,235 persons in December registered 8.3 per cent of idleness contrasted with percentages of 7.0 in November and 10.0 in December, 1931. In the Nova Scotia mines a practically unchanged situation was shown from November, few members being reported as actually unemployed though there was evidence of considerable short time work. In the Alberta and British Columbia mines the

TABLE II.—PERCENTAGES OF UNEMPLOYMENT IN TRADE UNIONS BY GROUPS OF INDUSTRIES

| Month           | Fishing | Lumbering and Logging | Mining | Manufacturing | Vegetable products | Pulp and paper | Pulp and paper mill workers | Printing, publishing and lithographing | Electric current | Fibres, textiles and textile workers | Textile workers | Hat, cap and glove workers | Animal products | Iron and its products | Non-ferrous metals | Clay, glass and stone products | Mineral products | Miscellaneous industries | Building and construction | Shipping and stevedoring | Local transportation | Communication | Telephone operation | Trade (retail) shop | Services | Governmental | Miscellaneous | All occupations |
|-----------------|---------|-----------------------|--------|---------------|--------------------|----------------|-----------------------------|--|------------------|--------------------------------------|-----------------|----------------------------|-----------------|-----------------------|--------------------|--------------------------------|------------------|--------------------------|---------------------------|--------------------------|----------------------|---------------|---------------------|---------------------|----------|--------------|---------------|-----------------|

| August, 1923    | 68.0    | 4.3                   | 8.1    | 7.9           | 1.5                | 1.7            | 2.2                         | 2.7                                    | 12.7             | 18.4                                 | 3.4             | 23.3                       | 0.3             | 3.3                   | 5.7                | 4.5                            | 23.2             | 0.2                      | 2.0                       | 2.1                      | 2.1                  | 2.1           | 1.6                 | 2.2                 | 1.6      | 2.2          | 1.6           | 2.2             |
| September, 1923 | 68.0    | 4.3                   | 8.1    | 7.9           | 1.5                | 1.7            | 2.2                         | 2.7                                    | 12.7             | 18.4                                 | 3.4             | 23.3                       | 0.3             | 3.3                   | 5.7                | 4.5                            | 23.2             | 0.2                      | 2.0                       | 2.1                      | 2.1                  | 2.1           | 1.6                 | 2.2                 | 1.6      | 2.2          | 1.6           | 2.2             |
| October, 1923   | 68.0    | 4.3                   | 8.1    | 7.9           | 1.5                | 1.7            | 2.2                         | 2.7                                    | 12.7             | 18.4                                 | 3.4             | 23.3                       | 0.3             | 3.3                   | 5.7                | 4.5                            | 23.2             | 0.2                      | 2.0                       | 2.1                      | 2.1                  | 2.1           | 1.6                 | 2.2                 | 1.6      | 2.2          | 1.6           | 2.2             |
| November, 1923  | 68.0    | 4.3                   | 8.1    | 7.9           | 1.5                | 1.7            | 2.2                         | 2.7                                    | 12.7             | 18.4                                 | 3.4             | 23.3                       | 0.3             | 3.3                   | 5.7                | 4.5                            | 23.2             | 0.2                      | 2.0                       | 2.1                      | 2.1                  | 2.1           | 1.6                 | 2.2                 | 1.6      | 2.2          | 1.6           | 2.2             |
| December, 1923  | 68.0    | 4.3                   | 8.1    | 7.9           | 1.5                | 1.7            | 2.2                         | 2.7                                    | 12.7             | 18.4                                 | 3.4             | 23.3                       | 0.3             | 3.3                   | 5.7                | 4.5                            | 23.2             | 0.2                      | 2.0                       | 2.1                      | 2.1                  | 2.1           | 1.6                 | 2.2                 | 1.6      | 2.2          | 1.6           | 2.2             |

employment level was reduced by about 3 per cent from November. Unemployment in the coal fields of Nova Scotia was in much lesser volume than in December, 1931, Alberta and British Columbia unions, however, showing large increases in slackness. As in Nova Scotia the Western miners worked at greatly reduced time.

Operations in building and construction were further restricted during December, the 241 unions making returns with 20,406 members showing 69.2 per cent of idleness contrasted with 63.5 per cent in November. Responsibility for this adverse change rested largely with Ontario unions, particularly those of bricklayers, masons and plasterers. In addition, granite and stonecutters, bridge and structural iron workers, carpenters and joiners, painters, decorators and paperhangers, and hod carriers and building labourers all reported a somewhat lower employment volume than in November. Slight improvement, however, was reflected by tile layers, lathers and roofers, electrical workers and plumbers and steam-fitters. Compared with the situation in the building trades during December, 1931, when 58.1 per cent of the membership involved was idle, electrical workers were much better engaged during the month under survey, and gains in activity of lesser degree, though noteworthy, occurred for painters, decorators and paperhangers. In the remaining trades, however, conditions were decidedly less favourable than in December, 1931.

Employment in the transportation industries was slightly retarded during December from the previous month as manifest by the reports tabulated from 772 local unions with an aggregate of 57,405 members. Of these 8,914 were reported idle at the end of the month, a percentage of 15.5 contrasted with 13.5 per cent of inactivity in November. Less favourable conditions also prevailed from December, 1931, when 12.3 per cent of unemployment was reported. The steam railway division, which included over 81 per cent of the entire group membership reported, showed some falling off in activity from both the previous month and December, 1931. Among navigation workers there was considerable curtailment in the employment volume afforded from November though the situation was much better than in December, 1931. Teamsters and chauffeurs were quite busy during December, showing noteworthy improvement from the previous month, and also from the corresponding month in 1931, while among street and electric railway employees the same situation obtained in the three months used here for comparative purposes.

Retail clerks were much busier during December than in the previous month, the 5 unions making returns with 1,079 members

showing 0.7 per cent of inactivity compared with 5.8 per cent in November. A high level of activity was also indicated in December, 1931, when 0.3 per cent of the members reported were without work.

Reports tabulated from 73 associations of civic employees during December, 1932, with a total of 7,358 members showed that 464 or 6.3 per cent were unemployed at the end of the month in contrast with percentages of 5.6 in November and 2.3 in December, 1931.

There was a slight lessening of the unemployment volume among unions in the miscellaneous group of trades during December, the 112 locals from which reports were received with 4,025 members showing 20 per cent of idleness at the end of the month in contrast with 21.3 per cent in November. Hotel and restaurant employees indicated marked improvement in conditions from November and better employment was apparent also among stationary engineers and firemen, theatre and stage employees and barbers. Activity for unclassified workers, however, declined substantially. In making a comparison with the returns in the miscellaneous group of trades for December, 1931, when 19.1 per cent of the members reported were idle, hotel and restaurant employees, as in the previous comparison, were afforded a greater amount of work during the month reviewed, and slight gains were registered by barbers. On the other hand, a less favourable situation was reflected by theatre and stage employees, unclassified workers and stationary engineers and firemen.

Among fishermen the employment tendency in December, 1932, was toward a reduction in activity, though the change was slight as shown by the reports tabulated from 2 associations with a membership numbering 705 persons. Of these 200 or 28.4 per cent were without employment on the last day of the month in contrast with 27.0 per cent in November. Considerable curtailment of employment was manifest from December, 1931, when 20.2 per cent of idleness was recorded.

From unions of lumber workers and loggers 4 reports were received during December, 1932, with an aggregate of 1,300 members, 675 of whom or 51.9 per cent were unemployed on the last day of the month contrasted with percentages of 46.5 in November and 20.6 in December, 1931.

Table I shows by provinces the percentage of members who were on an average unemployed each year from 1919 to 1932 inclusive, and also the percentage of unemployment by provinces for December of each year from 1919 to 1929 inclusive, and for each month from January, 1930, to date. Table II summarizes the returns in the various groups of industries for the same months as in Table I.

### (3) Employment Offices Reports for December, 1932

The volume of business transacted by the Offices of the Employment Service of Canada during the month of December, 1932, showed a gain of nearly 3 per cent in the average daily placements effected when compared with those of the preceding month, while a decline of 18 per cent was recorded from the placements effected daily during December a year ago. The expansion in the first instance was largely due to additional placements in services, construction and maintenance and logging, these gains being partly offset by declines in farming, transportation and manufacturing. Under the second com-

the graph that the curves of vacancies and placements in relation to applications showed an abrupt upward trend from November, which continued throughout the month under review, the curve of vacancies on December 31 being about 20 points higher and that of placements 17 points above the levels shown at the end of the preceding month, but 6 and 8 points, respectively, below the levels attained at the close of December a year ago.

The ratio of vacancies to each 100 applications was 57.2 and 68.6 during the first and second half of December, 1932, in comparison with the ratios of 63.4 and 74.3 during the

#### POSITIONS OFFERED AND PLACEMENTS EFFECTED FOR EACH ONE HUNDRED APPLICATIONS FOR EMPLOYMENT

Applications ————— Vacancies - - - - - Placements o-o-o-o-o-o

parison, a heavy loss took place in construction and maintenance, with lesser declines in manufacturing and transportation, while farming showed a substantial gain, due to additional placements effected under the Farm Relief Act, with noteworthy increases also reported in services and logging.

The accompanying chart shows the trend of employment since January, 1930, as represented by the ratio of vacancies notified and of placements effected for each 100 applications for work registered at the Offices of the Service throughout Canada, computations being made semi-monthly. It will be seen from

same periods of 1931. The ratios of placements to each 100 applications during the periods under review were 54.4 and 64.4 as compared with 61.2 and 72.4 during the corresponding month of 1931.

The average number of vacancies reported daily by employers to the Offices of the Service throughout Canada during December, 1932, was 1,188, as compared with 1,148 during the preceding month and with 1,418 in December a year ago.

The average number of applications for employment received daily by the Offices during the month under review was 1,913, in

comparison with 2,607 in November and with 2,073 in December, 1931.

The average number of placements made daily by the Offices of the Service during December, 1932, was 1,123, of which 550 were in regular employment and 573 in work of one week's duration or less, as compared with a total daily average of 1,096 during the preceding month. Placements in December a year ago averaged 1,375 daily, consisting of 552 placements in regular and 528 in casual employment.

During the month of December, 1932, Offices of the Service referred 30,394 persons to vacancies and effected a total of 29,192 placements. Of these, the placements in regular employment were 14,290, of which 11,361 were of men and 2,929 of women, while placements in casual employment totalled 14,902. The number of vacancies reported by employers was 23,847 for men and 7,038 for women, a total of 30,885, while applications for work numbered 49,736, of which 40,332 were from men and 9,404 from women.

During the year 1932, the Offices of the Service throughout Canada reported 366,028 vacancies, 652,428 applications and 352,214 placements in regular and casual employment, a decline of 25 per cent from the placements effected during the preceding year, 1931.

The following table gives the placements effected by the Offices of the Employment Service of Canada, each year, from January, 1922, to date:

| Year      | Placements |         |         |
|-----------|------------|---------|---------|
|           | Regular    | Casual  | Totals  |
| 1922..... | 297,827    | 95,695  | 393,522 |
| 1923..... | 347,165    | 115,387 | 462,552 |
| 1924..... | 247,425    | 118,707 | 366,132 |
| 1925..... | 306,804    | 106,021 | 412,825 |
| 1926..... | 300,226    | 109,929 | 410,155 |
| 1927..... | 302,723    | 112,046 | 414,769 |
| 1928..... | 334,604    | 135,724 | 470,328 |
| 1929..... | 260,747    | 137,620 | 398,367 |
| 1930..... | 187,872    | 180,807 | 368,679 |
| 1931..... | 175,632    | 295,876 | 471,508 |
| 1932..... | 153,771    | 198,443 | 352,214 |

#### NOVA SCOTIA

During the month of December, 1932, positions offered through employment offices in Nova Scotia were 42 per cent higher than in the preceding month and 268 per cent more than during the corresponding month of 1931. Placements were nearly 44 per cent above November and 280 per cent in excess of December a year ago. Work provided in relief of unemployment on road construction was responsible for the large gain in placements over December, 1931, as losses were reported in all groups except construction and mainten-

ance. None of the declines, however, were large. Nearly all placements effected during the month were in construction and maintenance and services, there being 2,805 in the former and 328 in the latter group. Of the placements in services, 211 were of household workers. There were 55 men and 59 women placed in regular employment during the month.

#### NEW BRUNSWICK

There was an increase of over 14 per cent in the number of positions offered through employment offices in New Brunswick during December, when compared with the preceding month and of 96 per cent in comparison with the corresponding month of 1931. Placements also were over 14 per cent higher than in November and 99 per cent above December a year ago. As in Nova Scotia, relief work on road construction accounted for the large gain in placements over December, 1931. The only loss of importance was in services, the changes in other groups being nominal only. Placements were almost entirely confined to construction and maintenance and services, there being 1,000 in the former group and 388 in the latter. Of the placements in services, 314 were of household workers. Regular employment was found for 162 men and 45 women.

#### QUEBEC

The demand for workers, as indicated by orders received at employment offices in the Province of Quebec during December, were nearly 7 per cent less than in the preceding month, but 58 per cent greater than during the corresponding month of 1931. Placements declined over 15 per cent in comparison with November, but were nearly 31 per cent higher than during December a year ago. An increase in placements in the services' group was responsible for the gain over December, 1931, as the improvement reported in trade and manufacturing was offset by a decline in bush placements. Industrial divisions in which most of the placements were effected during the month were manufacturing 81; logging 47; construction and maintenance 169; trade 76; and services 1,134, of which 1,038 were of household workers. There were 389 men and 820 women placed in regular employment during the month.

#### ONTARIO

During December, employment offices in Ontario received orders for over 6 per cent more workers than in the preceding month, but for 45 per cent less than during the corresponding month of 1931. There was a gain of 5 per cent in placements when compared

## REPORT OF THE EMPLOYMENT OFFICES FOR THE MONTH OF DECEMBER, 1932

| Offices                       | Vacancies                    |                                 | Applicants                          |                             |               |               |                                      | Regular<br>place-<br>ments<br>same<br>period<br>1931 |

\* 419 placements effected by offices since closed.

with November, but a loss of 46 per cent in comparison with December a year ago. Reduction in work provided in relief of unemployment on road construction accounted for the decrease in placements when the month under review is compared with December, 1931. Gains were reported in services, logging and farming, but there was a decline in the manufacturing industries. Placements by industrial divisions included manufacturing 498; logging 782; farming 244; transportation 105; construction and maintenance 4,441; trade 354; and services 4,237, of which 1,668 were of household workers. There were 3,776 men and 971 women placed in regular employment during the month.

#### MANITOBA

Orders received at employment offices in Manitoba during December called for nearly 3 per cent more workers than in the preceding month, but nearly 27 per cent less than during the corresponding month of 1931. There was a gain of over 6 per cent in placements when compared with November, but a decline of over 24 per cent in comparison with December a year ago. Less relief work on road construction was provided during December, 1932, than in the corresponding month of the preceding year, which accounted for the decline in placements under this comparison. Losses were also reported in services and trade, but these reductions were offset in part by gains in farming under the Farm Relief Plan and logging. Industrial divisions in which most of the placements were effected during the month were manufacturing 24; logging 226; farming 1,182; construction and maintenance 946; trade 45; and services, 823, of which 639 were of household workers. Placements in regular employment numbered 1,857 of men and 309 of women.

#### SASKATCHEWAN

Opportunities for employment, as indicated by orders received at employment offices in Saskatchewan during December, were 8 per cent better than in the preceding month and nearly 55 per cent in excess of the corresponding month of 1931. There was a gain of less than 1 per cent in placements when compared with November, but of nearly 45 per cent in comparison with December a year ago. Placements on farms under the Unemployment and Farm Relief Act accounted for the gain over December, 1931. The only other change of importance was in construction and maintenance, in which group fewer placements had been made on highway construction. Small gains were shown in logging, trade and mining, with corresponding losses in services and manu-

facturing. Placements by industrial divisions included manufacturing 32; logging 44; farming 2,167; construction and maintenance 923; trade 58; and services 614, of which 504 were of household workers. There were 2,922 men and 326 women placed in regular employment during the month.

#### ALBERTA

Orders received and placements effected by employment offices in Alberta during December were 4 per cent higher than in November, but 44 per cent less than during December, 1931. The highway division of construction and maintenance showed the largest decline in placements from December a year ago, and was mainly responsible for the adverse change under this comparison, although all groups, except farming and logging, participated in the loss. Industrial divisions in which most of the placements were effected were logging 198; farming 396; mining 50; construction and maintenance 712; and services 417, of which 330 were of household workers. Regular employment was found for 848 men and 226 women during the month.

#### BRITISH COLUMBIA

Employment opportunities, as indicated by orders received at employment offices in British Columbia during December, were nearly 3 per cent better than in the preceding month, and nearly 17 per cent in excess of the corresponding month of 1931. There was a gain also in placements of nearly 5 per cent, when compared with November and of nearly 17 per cent in comparison with December a year ago. Work provided in relief of unemployment on road construction accounted for the gain in placements over December, 1931, as the changes in all other groups were quite small. Placements by industries included manufacturing, 24; construction and maintenance, 2,605; trade, 45; and services, 743, of which 432 were of household workers. During the month 1,352 men and 173 women were placed in regular employment.

#### Movement of Labour

During the month of December, 1932, the offices of the Employment Service of Canada made 14,290 placements in regular employment, 6,954 of which were of persons for whom the employment found was outside the immediate vicinity of the offices at which they were registered. Of the latter, 456 were granted the Employment Service reduced transportation rate, 277 going to centres within the same province as the despatching office and 179 to other provinces. The reduced transportation rate, which is 2.7 cents per mile with a mini-

mum fare of \$4, is granted by the railway companies to bona fide applicants at the Employment Service who may desire to travel to distant employment for which no workers are available locally.

Ontario offices issued 206 certificates for reduced transportation during December, of which 204 were given to persons going to provincial employment. From Port Arthur 139 workers were conveyed to situations within the same zone and included 133 bushmen and 6 highway construction cookees. Destined to the Port Arthur zone also, were 5 miners transferred from Timmins. The Sudbury office was instrumental in the despatch of 23 bushmen within its own zone and of 2 bushmen to Timmins, the latter zone receiving also 35 pulp cutters from North Bay. The 2 persons travelling outside the province were lumber scalers who received certificates at Pembroke for transportation to Amos. In Manitoba during December both the provincial and inter-provincial labour movement originated at Winnipeg and comprised the transfer of 8 persons within the province and 153 to other provinces. The majority of the workers travelling outside the province were for the Port Arthur zone, which was the destination of 150 bushworkers, 1 farm hand and 1 miner. In addition 1 farm hand was carried at the special rate to North Battleford. Provincially 2 hotel workers and 1 town general were sent to Dauphin, 1 hotel general and 1 farm hand to Brandon and 2 farm hands and 1 hotel cook within the Winnipeg zone. By offices in Saskatchewan 31 transfers at the reduced rate were effected in December, 7 of

which were to employment within the province and 24 to centres outside. The inter-provincial movement was entirely of bushmen shipped from Prince Albert to points in the Dauphin zone. Included in the provincial transfers from Regina were 1 hotel cook and 1 teacher journeying to centres within the Regina zone, 1 Red Cross worker to Prince Albert and 1 farm hand to Moose Jaw. On certificates secured at Saskatoon 3 mine labourers were transported to Prince Albert. Workers taking advantage of the Employment Service reduced transportation rate in Alberta during December totalled 49, all of whom were conveyed to situations within the province. The Edmonton office was responsible for the transfer of 46 of these to centres within its own zone, including 28 bushworkers, 8 mine workers, 7 farm hands, 2 farm household workers and 1 town maid. Travelling from Calgary 2 farm hands went to Drumheller and 1 hotel cook to employment within the Edmonton zone. All transfers in British Columbia during December were effected by the Vancouver office and numbered 9, these being provincial. To the Penticton zone were despatched 1 farm hand and 2 farm housekeepers, to Nelson 1 logger and within the Vancouver zone 3 mine workers and 2 farm hands.

Of the 456 workers who were transported at the reduced rate during December 240 were conveyed by the Canadian National Railways, 200 by the Canadian Pacific Railway, 10 by the Temiskaming and Northern Ontario Railway, 5 by the Pacific Great Eastern Railway and 1 by the Northern Alberta Railway.

#### (4) Building Permits Issued in Canada During December, 1932

The building permits issued by 61 cities in December, 1932, represented construction work valued at \$1,480,731, as compared with \$2,505,309 in November, 1932, and \$7,895,106 in December, 1931. There was, therefore, a decrease of \$1,024,578 or 40.9 per cent in December as compared with the preceding month, and of \$6,414,375 or 81.2 per cent in comparison with the high total for the same month of 1931. In this record, which goes back to 1920, the December, 1932, figure was exceeded by the total for December of each year from 1920-1931, but the wholesale costs of building materials, as measured by the Bureau's index number, were lower than in any other year since 1920.

Detailed statements were received from some 50 cities, showing that they had issued almost 100 permits for dwellings valued at some \$350,000 and over 600 permits for other buildings at an estimated cost of about \$900,000. There was also one permit in St.

Boniface for engineering work at a cost of \$100,000. During November, the construction of some 200 dwellings and 1,400 other buildings was authorized; these were estimated to cost approximately \$630,000 and \$1,800,000, respectively.

As compared with the preceding month, Manitoba alone, registered an increase in the value of the authorized building, showing a gain of \$84,350, or 27.7 per cent. Declines were indicated in the remaining provinces. While the absolute decreases were \$582,834 or 38.3 per cent in Ontario and \$349,114 or 57.3 per cent in Quebec, the relative decreases of \$20,015 or 90.4 per cent in Saskatchewan and \$30,194 or 59.6 per cent in Alberta were most pronounced.

All provinces except New Brunswick recorded decreases as compared with December, 1931, in the value of the building authorized. In this comparison also, Quebec and Ontario reported the most marked losses of \$2,825,870

## ESTIMATED COST OF BUILDING WORK AS INDICATED BY BUILDING PERMITS ISSUED BY 61 CITIES

| *St. Thomas.....          | Nil               | 3,525             | Nil               |                              |                   |                   |                   |

or 91.5 per cent and \$2,927,747 or 75.7 per cent respectively.

Montreal, Toronto, Winnipeg and Vancouver showed decreases in the value of the building permits issued as compared both with November, 1932, and December, 1931. Saint John, Belleville, Moose Jaw and Prince Rupert recorded advances in both comparisons.

*Cumulative Record for 1932.*—The following table shows the value of the building authorized by 61 cities during December and in the years since 1920; the 1932 figures are unrevised, while for preceding years the statistics are revised. (A revised statement for 1932 will be issued next month.) Index numbers, based upon the total value of the building authorized by these cities during 1926 as 100, are given below, as are the average index numbers of wholesale prices of building materials in the years, 1920-1932. (Average 1926=100.)

The unrevised statistics for 1932 indicate that last year's aggregate was the smallest since 1920; it should also be noted, however, that the Bureau's index number of wholesale

| Year      | Value of permits issued in December | Value of permits issued in twelve months | Indexes of value of permits issued in twelve months (1926=100) | Average Indexes of wholesale prices of building materials in twelve months (Average 1926=100) |
|-----------|-------------------------------------|--|--|---|

prices of building materials was also considerably lower than in any other year since 1920.

The accompanying table gives the value of the building permits issued by 61 cities in November and December, 1932, and December, 1931. The 35 centres for which records are available since 1910 are marked with asterisks.

## EMPLOYMENT AND UNEMPLOYMENT IN GREAT BRITAIN AND THE UNITED STATES

### Great Britain

THE British *Ministry of Labour Gazette*, January, 1933, summarized the employment situation as follows:—

Employment at December 19, showed an improvement as compared with November 21. The principal industries in which employment improved were coal mining, metal manufacture, general engineering, iron founding, and slate quarrying, the textile industries (except woollen and worsted, silk and artificial silk, and hosiery), the clothing, drink, and glass bottle industries, the distributive trades, and the transport, communication, hotel and boarding-house services.

On the other hand, employment declined in the pottery, woollen and worsted, silk and artificial silk, hosiery, boot and shoe, leather, and leather goods industries, and the seasonal decline continued in building and public works contracting.

The improvement in employment was mainly in London, the Northern Counties and Wales, and less marked in the Southern Counties and the Midlands. In Scotland and in Northern Ireland there was a slight decline. Employment was still moderate in London and the South-Eastern Counties, slack in the Southwest and in the Midlands, and bad in all other areas.

Among the workpeople, numbering approximately 12,808,000, insured against unemployment in Great Britain and Northern Ireland, and working in practically every industry except agriculture and private domestic service, the percentage unemployed at December 19, 1932 (including those temporarily stopped as well as those wholly unemployed) was 21·7, as compared with 22·2 at November 21, 1932, and with 20·9 at December 21, 1931. The percentage wholly unemployed at December 19, 1932, was 18·1, as compared with 18·2 at November 21, 1932, while the percentage temporarily stopped was 3·6 as compared with 4·0. For males alone, the percentage at December 19, 1932, was 25·1, and for females, 12·6, at November 21, 1932, the corresponding percentages were 25·7 and 13·0.

At December 19, 1932, the number of persons on the Registers of Employment Exchanges in Great Britain was 2,171,175 wholly unemployed, 454,522 temporarily stopped, and 97,590 normally in casual employment, making a total of 2,723,287. This was 76,519 less than a month before, but 213,366 more than a year before. The total included 2,226,483 men, 64,466 boys, 388,406 women and 43,932 girls.

Comparison of the numbers on the registers with the figures for a year before is affected by the results of legislative and administrative changes.

The persons on the Registers included 1,213,813 insured persons with claims for insurance benefit (consisting of those who (a) had paid at least 30 contributions during the preceding two years; (b) who received less than 156 days' benefit in their current benefit years; and (c) if 156 days' benefit had become payable in a previous benefit year ending on or after November 12, 1931, had paid at least 10 contributions since the 156th day of benefit); 1,139,434 insured persons with applications for transitional payments; 239,677 insured persons not in receipt of insurance benefit or transitional payments, and 130,363 uninsured persons.

In Great Britain and Northern Ireland, the total number of persons on the Registers of Employment Exchanges at December 19, 1932, was 2,795,795.

### United States

The Bureau of Labor Statistics of the U.S. Department of Labor reports the changes in employment and payrolls in December, 1932, as compared with November, 1932, based on payroll reports ending nearest the 15th of the month received from 68,229 identical establishments in 17 major industrial groups having in December 4,476,531 employees whose combined earnings in one week were \$86,519,751. The combined totals of these 17 industrial groups show a decrease of 0·4 per cent in employment and a decrease of 0·9 per cent in payrolls over the month interval.

Increased employment was shown in 4 of the 17 groups included in this monthly survey, and increased payrolls were reported in 3 groups. The retail trade group reported a seasonal gain in employment of 16·5 per cent and increased payrolls of 10·1 per cent. The metalliferous mining group reported a gain of 4·2 per cent in employment coupled with a decrease of one-tenth of 1 per cent in payrolls; the crude petroleum producing group reported an increase of 1·2 per cent in employment coupled with a decrease of 1·7 per cent in earnings; and the bituminous coal mining group reported an increase of 0·9 per cent in number of employees coupled with a decrease of 0·9 per cent in payrolls. The electric-railroad operation group reported a gain of 0·4 per cent in payrolls coupled with a decrease of 0·5 per cent in employment and the anthra-

cite mining group reported a gain of 10·2 per cent in earnings over the month interval coupled with a decrease of 0·5 per cent in number of workers. In the remaining 11 groups in which both decreased employment and earnings were reported, the decreases were as follows: Laundries and banks—brokerage—insurance—real estate, 0·4 per cent in employment and 0·8 per cent in payrolls each; power and light, 0·8 per cent in employment and 0·1 per cent in payrolls; wholesale trade, 0·8 per cent in employment and 1·1 per cent in payrolls; telephone and telegraph, 0·9 per

cent in employment and 1·1 per cent in payrolls; hotels, 1·4 per cent in employment and 1·6 per cent in payrolls; manufacturing industries, 1·9 per cent in employment and 2·3 per cent in payrolls; dyeing and cleaning, 3·6 per cent in employment and 7·4 per cent in payrolls; quarrying and non-metallic mining, 14·4 per cent in employment and 18·7 per cent in payrolls; building construction, 15·4 per cent in employment and 20·3 per cent in payrolls; and canning and preserving, 33·2 per cent in employment and 25·4 per cent in payrolls.

## FAIR WAGES CONDITIONS IN DOMINION GOVERNMENT CONTRACTS

**D**URING the month of January, 1933, none of the departments of the Government of Canada entered into any contracts for works of construction, repair, remodelling or demolition, but following is a statement of payments made during January for supplies ordered by the Post Office Department under contracts which were subject to the regulations for the suppression of the sweating system, the securing of payment to the workers of fair wages and the performance of the work under proper sanitary conditions:—

| Nature of Orders   | Amount    |
|--|-----------|
| <i>Making metal dating stamps and type, brass crown seals, cancellers, etc.—</i> |           |
| Pritchard-Andrews Co. of Ottawa, Ltd. . . . .                                    | \$ 586 04 |

## NEGOTIATIONS AS TO WAGES ON STEAM RAILWAYS IN CANADA AND THE UNITED STATES

**F**OLLOWING proceedings under the Industrial Disputes Investigation Act, an agreement was reached a year ago between the principal railway companies in Canada and the unions representing engineers, firemen, conductors, trainmen and telegraphers providing for a ten per cent deduction from the pay of each employee from December 1, 1931, to January 31, 1933, the basic scales being unchanged (LABOUR GAZETTE, February, 1932, page 124). It was provided that if business conditions should not improve sufficiently to enable the railway companies to terminate this agreement on January 31, 1933, notice would be given to the representatives of the employees on December 1, 1932, and conferences would be held. Such a notice was given, and during the conference which followed the railway companies notified the unions representing the employees of a reduction in the

basic wage scales of twenty per cent to be effective March 3, 1933. The union representatives arranged to place the matter before the local branches of the organizations and later to hold conferences with the railway companies. The classes affected by the changes proposed include 40,000 employees out of 150,000 railway employees. The agreements as to the ten per cent deduction for other classes of railway employees, maintenance of way, shops, clerks, freight handlers, etc., do not expire until later dates (LABOUR GAZETTE, April, 1932, page 452).

In the United States, an arrangement for a ten per cent deduction from the pay of each employee from February 1, 1932, to January 31, 1933, had been made on January 31, 1932; and during December, 1932, it was agreed between the twenty-one unions representing the various classes of employees that this

arrangement would be continued for nine months, when the basic rates would be automatically restored, unless agreements to the contrary had been made, and that on June 15, 1933, the railways might serve notice for a basic wage reduction to be followed by pro-

ceedings under the Railway Labour Act, 1926 (LABOUR GAZETTE, August, 1926, page 792); also that in these proceedings the railway companies would act collectively, and that all parties would attempt to have the proceedings completed by October 31, 1933.

### AGREEMENTS AS TO WAGES AND WORKING CONDITIONS FOR COAL MINERS IN NOVA SCOTIA, AT GLACE BAY, SYDNEY, MINES, SPRINGHILL AND STELLARTON

THE agreements in effect from February 1, 1932, to January 31, 1933, between the Dominion Coal Company, Limited, Glace Bay, the Nova Scotia Steel and Coal Company, Limited, Sydney Mines, the Cumberland Railway and Coal Company, Limited, Springhill, and the Acadia Coal Company, Limited, Stellarton, subsidiaries of the Dominion Steel and Coal Corporation, Limited, and District 26, the United Mine Workers of America, have been renewed for another period of twelve months, without any changes except that the rates of pay for some fifty to sixty employees in special positions in receipt of high earnings, not included in the day wage scale, are reduced as from May 1, 1933.

The expiring agreement was reached as a result of the recommendations of a Royal Commission appointed by the Government of Nova Scotia, the text of the report being

given in the LABOUR GAZETTE, March, 1932, page 270. The text of the agreements appeared in the issue for August, 1933, page 913. The Commission had recommended a general reduction of twelve and one-half per cent in piece-rates and ten per cent in day-rates, with a minimum of \$3.25 per day for all adult miners, this being the existing rate for surface labourers. In regard to the wage scales of the employees reduced by the new agreement, the Commission had recommended that they should be dealt with separately, their rates being the result of differentials, allowances, etc., in some cases after investigation by conciliation boards.

The agreement was ratified by a vote of the United Mine Workers of America employed by the mining companies parties to the agreement on January 31, 1933.

### RECENT INDUSTRIAL AGREEMENTS AND SCHEDULES OF WAGES

A SUMMARY is given below of the more important industrial agreements and schedules of wages and working conditions that have recently been received in the Department. Such agreements are summarized each month in the LABOUR GAZETTE. In the majority of cases the agreements are signed by both the employers and the employees. Verbal agreements, which are also included in the records, are schedules of rates of wages and hours of labour and other conditions of employment agreed upon between the parties concerned, and in effect though not signed. In addition to these, important schedules of wages are summarized, including civic schedules. In each agreement or schedule, the rates of wages for the principal classes of labour are given, with other information of general interest.

#### Manufacturing: Printing and Publishing

SAINT JOHN, N.B.—NEWSPAPER PUBLISHERS AND THE INTERNATIONAL TYPOGRAPHICAL UNION, LOCAL No. 85.

Agreement to be in effect from May 1, 1932, to May 1, 1933.

This agreement is similar to the one previously in effect and summarized in the LABOUR GAZETTE, August, 1930, page 969, with the following exception:—

Although the agreement continues the wage rates of \$39 per week for foremen, linotype operators and machinists and 37 per week for floormen, the following clause is added:

"Should the party of the first part find at any time during the term of this contract, that business conditions affecting the revenues of the said party warrant a reduction in salaries and wages of all departments, it is hereby agreed by the party of the second part that a ten per cent reduction in wages will be acceptable for the balance of the term of this contract, provided, however, that salaries and wages of all other departments are similarly reduced, except in cases of existing contracts and salaries of certain minor employees of small income."

Under this clause, a wage reduction of 10 per cent was made May 1, 1932, and a further reduction of 10 per cent January 1, 1933.

### Transportation and Public Utilities: Street and Electric Railways

WINDSOR, ONTARIO, AND VICINITY.—ESSEX DIVISION, HYDRO-ELECTRIC RAILWAYS AND THE AMALGAMATED ASSOCIATION OF STREET AND ELECTRIC RAILWAY EMPLOYEES OF AMERICA, LOCAL No. 616.

Agreement to be in effect from July 1, 1932, to June 30, 1933.

This agreement is the same as the one previously in effect and summarized in the LABOUR GAZETTE, August, 1931, page 934, and June, 1929, page 678, with the following exceptions:—

Wages: sub-station operators \$119.70 per month (The former rate was \$140.); motormen, conductors, one-man car and bus operators 53 cents per hour (The former rates were 52 cents during first six months, 57 cents during second six months, and 62 cents after the first year of service).

### Transportation and Public Utilities: Water Transportation

HALIFAX, N.S.—CERTAIN STEAMSHIP COMPANIES AND THE INTERNATIONAL LONGSHOREMEN'S ASSOCIATION, LOCAL No. 269.

This agreement was reached as a result of direct negotiations between the parties. A Board of Conciliation and Investigation under the Industrial Disputes Investigation Act had been established but not fully constituted.

Agreement to be in effect from December 17, 1932, to November 30, 1933, and from year to year thereafter until notice.

This agreement is similar to the one previously in effect and summarized in the LABOUR GAZETTE, February, 1928, February, 1930, and January, 1931, with the following exception:—

The wage rates are reduced 10 per cent, making the rate for ordinary longshore work 63 cents per hour for day work and 72 cents for night work. The rates for special cargoes and work under special conditions are similarly reduced 10 per cent.

## PRICES, RETAIL AND WHOLESALE, IN CANADA, JANUARY, 1933

### Cost of Living, Prices of Staple Articles and Index Numbers

PRICES during the month again showed a downward movement, both the weekly family budget in terms of retail prices and the Dominion Bureau of Statistics index number of wholesale prices being lower.

In retail prices the cost per week of a list of twenty-nine staple foods in terms of the average retail prices in sixty-nine cities was \$6.94 for January as compared with \$7.04 for December, 1932; \$7.68 for January, 1932; \$9.86 for January, 1931; \$11.88 for January, 1930; \$11.30 for January, 1929; \$11.03 for January, 1922; \$16.92 for June, 1920 (the peak); and \$7.73 for January, 1914. The most important change was a substantial fall in the price of eggs, while the prices of mutton, pork, bacon, lard and flour were also lower. The prices of potatoes, shoulder roast of beef, butter, evaporated apples and prunes were slightly higher. Including the cost of fuel and rent with that of foods the total budget averaged \$15.89 at the beginning of January as compared with \$16.01 for December, 1932; \$17.59 for January, 1932; \$20.21 for January, 1931; \$22.17 for January, 1930; \$21.55 for January, 1929; \$21.52 for January, 1922; \$26.92 for July, 1920 (the peak); and \$14.49 for January, 1914. Fuel was slightly lower, due mainly to declines in the prices of bituminous coal and wood. A slight decrease in rent was reported from Vancouver.

In wholesale prices the index number calculated by the Dominion Bureau of Statistics, based upon prices in 1926 as 100, was slightly lower for January at 63.9 as compared with

64.0 for December, 1932; 69.4 for January, 1932; 75.9 for January, 1931; 95.3 for January, 1930; 94.0 for January, 1929; 97.1 for January, 1922; 164.3 for May, 1920 (the peak); and 64.9 for January, 1914. Ninety-seven prices quotations were lower, fifty-seven were higher and three hundred and forty-eight were unchanged.

In the classification according to chief component materials seven of the eight main groups were lower and one was higher. The groups which declined were: the Animals and their Products group, because of decreased prices for hogs, fresh and cured meats, lard and eggs which more than offset higher prices for hides, steers, lambs and calves; the Fibres, Textiles and Textile Products group, owing to lower prices for certain cotton fabrics, raw jute, hessian and raw silk; the Wood, Wood Products and Paper group, mainly because of reduced quotations for lumber and wood pulp; the Iron and its Products group, due mainly to lower prices for hot rolled and annealed steel sheets, cast iron pipe, scrap iron and steel; the Non-Ferrous Metals and their Products group, because of lower prices for electrolytic copper, lead, tin and zinc; the Non-Metallic Minerals and their Products group due to reduced quotations for hollow building blocks, sulphur and quicklime which more than offset advances for window glass, building stone and plaster; and the Chemicals and Allied Products group, because of lower prices for zinc oxide and sodium bicarbonate. The Vegetables and Vegetable Products group

advanced, higher prices for flax, oats, rye, wheat and flour influencing the index more than lower prices for corn, oatmeal, rolled oats, bran, shorts and coffee.

In the grouping according to purpose consumers' goods were considerably lower, due mainly to declines in the prices of coffee,

(Continued on page 236)

**COST PER WEEK OF A FAMILY BUDGET OF STAPLE FOODS, FUEL, AND LIGHTING, AND RENT IN TERMS OF THE AVERAGE PRICES IN SIXTY-NINE CITIES IN CANADA**

The budget is intended to show the changes in the cost of the items included, not to show the minimum cost for an average family

\* Prior to 1926 number of commodities was 236.

(Continued from page 229)

oatmeal, rolled oats, bran, shorts, cured meats, eggs and lard which more than offset advances in the prices of flour, potatoes and fresh meats. Producers' goods advanced slightly, higher prices for wheat, oats, flax, rye, hides, steers, calves, lambs and silver outweighing lower prices for corn, hogs, raw silk, lumber, coffee and zinc.

In the grouping according to origin raw and partly manufactured goods advanced, while fully and chiefly manufactured goods were lower. In the former group higher prices for wheat, barley, flax, steers, calves, lambs and silver more than offset lower prices for corn, hogs, lead, zinc and tin. In the latter group the decrease was due mainly to lower prices for bran, shorts, lard, iron pipe, copper wire bars and brick. Domestic farm products and articles of marine origin were slightly higher, while articles of forest origin and articles of mineral origin were lower.

## EXPLANATORY NOTE AS TO RETAIL PRICES

The table of retail prices and rentals shows the prices at the beginning of January of seventy-one staple foodstuffs, groceries, coal, wood and coal oil and the rent of six-roomed houses in sixty-nine cities throughout Canada. All prices are for delivered goods. The exact quality for which the quotation is given is set forth in the case of each commodity, and every effort has been made to ensure that the quotations in each case refer to the same class of commodity in order that the statistics may be available for purposes of comparison from month to month, from city to city, etc. The prices of foods and groceries in each city except milk and bread are the average of quotations reported to the Dominion Bureau of Statistics by a number of representative butchers, and grocers in each. Information as to prices of milk, bread and fuel and the rates for rent is secured by the correspondents of the LABOUR GAZETTE, and also by the Bureau of Statistics.

Statistics similar to these were published each month from 1910 to 1920, the figures during this period being secured at the middle of each month by the correspondents of the LABOUR GAZETTE resident in each locality from dealers doing a considerable business with workmen's households. From 1910 to 1915

the table contained a list of only the twenty-nine foods included in the family budget, with laundry starch, coal, wood, coal oil and rent. In 1915 when monthly publication of the budget in the LABOUR GAZETTE was begun it was decided to extend the list of foods to 40, and in 1920 the list of foods and groceries was still further extended to include over 100 items.

Beginning with October, 1922, a number of commodities were dropped from the list, and in the case of a number of articles the average prices of the grades most sold have been given, owing to the impossibility of securing prices for uniform grades for the various cities from month to month.

The quotations for rent are the prevailing rates for six-roomed houses of two classes in districts extensively occupied by workmen. The first class is of houses in good condition, favourably located in such districts with good modern conveniences. The second class is of houses in fair condition less desirably located, but still fairly central, without modern conveniences.

The weekly budget for a family of five, calculated in terms of the average prices in the cities for which reports are received, includes twenty-nine staple foods, laundry starch, coal, wood, coal oil, and rent, these being the items for which statistics have been obtained each month and published in the LABOUR GAZETTE since January, 1910. The quantities of each commodity included are modifications of those employed for similar calculations by various authorities. For some articles comparatively large quantities are included owing to the absence of other important items of the same class. For instance, the only fruits are evaporated apples and prunes, and the only fresh vegetable is potatoes. But, as market conditions affecting these usually affect the prices of other fruits and vegetables somewhat similarly, the relative proportions of expenditure on the various classes of foods tends to be maintained. At times when the price of an article heavily weighted for this purpose rises or falls (abnormally) the increase (or decrease) in food prices so indicated is exaggerated, and this should be taken in account in using the budget as an indicator of changes in the cost of living. In fuel and lighting, the quantities are estimated on a similar principle, anthracite coal being used chiefly east of Manitoba, and soft coal and wood in the western provinces,, while no allowance is made for the quantities required in the various localities owing to climatic conditions, nor for the differences in the heating value of the various fuels. It was estimated when the budget was first published in 1912, in the report on wholesale prices in Canada for 1911, that these calculations represented from sixty to eighty per cent of the expenditure of an ordinary family according to the total income. For the average family of five the expenditure on these items of food, fuel, light and rent would be perhaps two-thirds or about sixty-five per cent of the total income.

While the budget serves to show the increase or decrease from time to time in the cost of the items included, it does not purport to show the minimum cost of food and fuel supplies for an average family in the Dominion or in any one province. The quantities of meats, dairy products, cereals, etc., included were adopted as affording a liberal supply for the healthy family of a man at hard physical work. On the other hand an average family with an income suffi-

\*The figures for "all items" were calculated by giving the following weights to each group: Food, 35%; Fuel, 8%; Rent, 18½%; Clothing, 18½%; Sundries, 20%.

cient to do so would buy less meat, etc., but more fruit, fresh and canned vegetables, etc., so that comparative expenditure would be little changed.

### Index Numbers of Changes in the Cost of Living

In March, 1921, the Department published in the *LABOUR GAZETTE* a table of percentages of changes in the cost of living since 1913 as a tentative cost of living index number, using the figures of the above-mentioned budget for the calculation for food, fuel and rent, with preliminary figures for clothing and sundries added and this table has been brought down to date at intervals since. The calculation of a comprehensive cost of living index number covering all items of workingmen's family expenditure in progress since 1918 had been sufficiently advanced to permit the publication of preliminary figures by groups in a supplement to the *LABOUR GAZETTE*, January, 1926, on Prices in Canada and in Other Countries, page 9. This table gave figures for June and December each year from 1914 to 1926, inclusive. Figures have since been given for March and September each year since 1917 and the accompanying table gives figures for December each year from 1914 to 1921, quarterly from 1922 to 1930, and monthly since January, 1931. As stated in the above-mentioned supplement, the figures in the food group in the family budget are still used to show the changes in food prices but in the other groups the percentage changes in the prices of each article have been weighted according to workingmen's average family consumption, and in the fuel and light groups gas and electricity have been included.

### Cost of Electric Current and Gas for Householders

With rates in 1913 as 100, index numbers of electric light rates were 1900, 141.4; 1905, 135.6; 1910, 118.1; 1911, 113.4; 1912, 109.1; 1913, 100.0; 1914, 96.6; 1915, 90.3; 1916, 86.3; 1917, 84.6; 1918, 82.9; 1919, 81.6; 1920, 81.1; 1921, 81.4; 1922, 80.1; 1923, 77.7; 1924, 76.5; 1925, 73.8; 1926, 73.2; 1927, 70.9; 1928, 69.3; 1929, 67.4; 1930, 64.7; 1931, 64.1; 1932, 63.8.

The above figures were arrived at by converting to the base of 1913 as 100, an index number of electric current costs from 1900 to 1913 constructed for the Board of Inquiry into the cost of living in Canada, 1913-15 (Report, Vol. 2, page 318), and bringing the figures down to 1932. The figures are unweighted. The Dominion Bureau of Statistics has issued an index number of electric current rates for household consumption on the basis of figures in 1926 as 100, as follows: 1923, 108.3;

1924, 105.1; 1925, 101.7; 1926, 100.0; 1927, 99.0; 1928, 97.1; 1929, 94.6; 1930, 92.3; 1931, 89.6.

The following are index numbers of rates for manufactured and natural gas for the years 1913 to 1931 issued by the Dominion Bureau of Statistics: Manufactured gas, 1913, 100; 1914, 98.3; 1915, 98.1; 1916, 96.3; 1917, 100.7; 1918, 107.4; 1919, 111.1; 1920, 125.4; 1921, 143.6; 1922, 140.6; 1923, 135.7; 1924, 134.6; 1925, 131.6; 1926, 131.1; 1927, 128.9; 1928, 128.5; 1929, 128.0; 1930, 126.6; 1931, 125.1; Natural gas, 1913, 100; 1914, 107.0; 1915, 112.5; 1916, 112.5; 1917, 113.9; 1918, 114.0; 1919, 116.1; 1920, 125.1; 1921, 137.6; 1922, 163.2; 1923, 163.0; 1924, 162.2; 1925, 179.3; 1926, 172.4; 1927, 166.9; 1928, 159.3; 1929, 159.5; 1930, 158.8; 1931, 157.6. For the years 1900 to 1913 two index numbers of gas costs calculated for the Cost of Living Inquiry in 1914-15, have been averaged and converted to the base of 1913 as 100, as follows: 1900, 125.8; 1901, 125.8; 1902, 125.8; 1903, 125.2; 1904, 123.9; 1905, 120.1; 1906, 107.5; 1907, 108.8; 1908, 106.9; 1909, 105.7; 1910, 103.8; 1911, 99.4; 1912, 106.6; 1913, 100.0.

### Retail Prices

Beef prices showed little change during the month, sirloin steak averaging 20.6 cents per pound in January the same as in December, while rib roast was slightly higher at 15.8 cents per pound in January as compared with 15.6 cents in December. Mutton was down from an average price of 16.9 cents per pound in December to 16.6 cents in January. Pork prices were also lower, fresh being down from 12.9 cents per pound in December to 12.7 cents in January and salt pork from 14.2 cents to 14 cents. Breakfast bacon was  $\frac{1}{2}$  cent per pound lower at 18.1 cents. The price of lard declined in many localities, the average being down from 13 cents per pound in December to 12.3 cents in January.

Eggs showed a substantial seasonal decline in nearly all localities, fresh averaging 39.1 cents per dozen in January as compared with 45.4 cents in December and cooking averaging 29.5 cents per dozen in January and 32.1 cents in December. Milk was unchanged at an average price of 9.5 cents per pound. Butter prices averaged slightly higher, dairy being up from 22.6 cents per pound to 22.8 cents and creamery from 25.9 cents per pound to 26.9 cents. Cheese was fractionally lower at 19.6 cents per pound. Prices were slightly higher in most localities in the Prairie provinces.

Bread was unchanged at an average price of 5.6 cents per pound. The price of canned vegetables was fractionally higher, tomatoes

averaging 11.7 cents per tin, peas 11.6 cents and corn 11.7 cents. The price of potatoes was higher in most localities, the average for January being 93 cents per ninety pounds as compared with 88 cents the previous month. Evaporated apples were up in the average from 15.2 cents per pound to 15.5 cents. Prunes were also higher at 10.8 cents per pound in January as compared with 10.6 cents in December. The price of anthracite coal was practically unchanged at an average price of \$15.36 per ton. Bituminous coal was down from \$9.40 per ton in December to \$9.35 in January. Coke was also slightly lower at an average price of \$11.81 in January. A decrease in rent was reported from Vancouver.

### Wholesale Prices

The following is a summary of a statement on wholesale prices changes during the month issued by the Dominion Bureau of Statistics.

Grain prices for the most part averaged somewhat higher in January than in the previous month. No. 1 Manitoba northern cash wheat, Fort William and Port Arthur basis, averaged 44.2 cents per bushel in January as compared with 42.4 cents in December. The high price for the month was 46 cents per bushel reached on the 10th and the low 42 cents on the 3rd. The price of flax advanced from 70.2 cents per bushel to 77 cents, oats from 21 cents per bushel to 22.5 cents and rye from 28.7 cents per bushel to 31.1 cents. Western barley was slightly lower at 27.6 cents per bushel, while American corn at Toronto was 1 cent per bushel lower at 66.8 cents. Flour at Montreal was 10 cents per barrel higher at \$4.50. Rolled oats at Toronto was down from \$2.60 per ninety pound bag to \$2.45. Bran and shorts at Montreal each declined 62 cents per ton, the former to \$16.25 and the latter to \$17.25. Raw sugar at New York declined from 94.3 cents per cwt. to 79.5 cents (Canadian funds), while granulated at Montreal was unchanged at \$4.18 per cwt. Santos coffee at Toronto was again 1 cent per pound lower at 18 cents. Ceylon rubber at New York was down from 3.8 cents per pound to 3.6 cents (Canadian funds). In livestock good steers at Toronto showed little change at \$4.11 per hundred pounds, while at Winnipeg the price advanced from \$3.22 per hundred pounds to \$3.64. Veal calves at Toronto advanced from \$6.03 per hundred pounds to \$6.16 and at Winnipeg from \$5.60 per hundred pounds to \$6.03. Lambs at Toronto were up from \$5.18 per hundred pounds to \$5.92 and at Montreal from

\$4.75 per hundred pounds to \$5.61. Bacon hogs at Toronto declined from \$3.97 per hundred pounds to \$3.76 and at Winnipeg from \$3.08 per hundred pounds to \$2.86. Fresh eggs at Montreal were substantially lower at 31.8 cents per dozen as compared with 40.6 cents the previous month. The price at Toronto was down from 37.8 cents per dozen to 28.5 cents, while at Winnipeg the price was down from 36.8 cents per dozen to 28.3 cents. The decrease was said to be due in part to the unusually heavy production for the season. Creamery butter was little changed at Montreal at 23.5 cents per pound. Raw cotton at New York advanced from 6.9 cents per pound to 7.1 cents (Canadian funds), while raw silk was down from \$1.97 per pound to \$1.62. Common birch lumber was down from \$45. per thousand board feet to \$42, and hemlock mill run was 50 cents per thousand board feet lower at \$19. Cast iron pipe was down from \$50. per ton to \$48. Hot rolled and annealed steel sheets declined from \$3.88 per hundred pounds to \$3.72. Scrap steel was down from \$7.25 per ton to \$6.50 and No. 1 scrap iron from \$10 per ton to \$7. In non-ferrous metals electrolytic copper declined from \$7.02 per hundred pounds to \$6.91, imported copper wire bars from \$5.75 per hundred pounds to \$5.68 and tin from 30.5 cents per pound to 30 cents. Silver was slightly higher at 29 cents per ounce as compared with 28.9 cents in December. In building materials the price of hollow building blocks declined from \$100 per thousand to \$87.50. Quicklime was down from \$6.25 per ton to \$6. Granite blocks declined from \$1. per cubic foot to 85 cents.

Shorter working hours were recommended in the following paragraph in the speech from the Throne at the opening of the Legislature of the Province of Quebec on January 10: "It is unquestionable that the use, constantly increasing, of the marvellous modern mechanism has caused an overproduction which consumers cannot absorb. Neither inventive genius nor the ameliorations and progress which it creates can be stopped. Nevertheless statistics prove that 25 per cent of the working class are without work. The government believes that by diminishing the number of hours of work in certain industries which do not suffer from foreign competition, and for such periods as circumstances will justify, we can manage to give to many more of our workmen an opportunity of finding employment; as we do not forget that unemployment is the worst of scourges, both economical and moral."

## PRICES IN GREAT BRITAIN AND OTHER COUNTRIES

The following notes give the latest information available as to the movements of prices in Great Britain and certain other countries. The index numbers of the cost of living are from official sources unless otherwise stated. The authorities for the wholesale prices index numbers are named in all cases. The latest table showing cost of living and wholesale prices index numbers for various countries appeared in "Prices in Canada and Other Countries, 1932," issued as a supplement to the LABOUR GAZETTE, January, 1933.

### Great Britain

**WHOLESALE PRICES.**—The Board of Trade index number, on the base 1924=100, was 60·8 for December, a decline of 0·1 per cent for the month. Advances in meat and fish, iron and steel, coal and miscellaneous commodities were more than offset by declines in cereals, other food, other metals and minerals and textiles.

The *Statist* index number, on the base 1867-1877=100, was 77·7 for December, a decline of 0·3 per cent for the month. There were declines in all groups with the exception of a substantial advance in the animal food group.

**COST OF LIVING.**—The Ministry of Labour index number, on the base July 1914=100, was 142 at the end of December, a decline of one point from the first of the same month. Food was considerably lower while sundries were slightly higher.

### Germany

**WHOLESALE PRICES.**—The index number of the Federal Statistical Office on the base 1913=100, was 92·4 for December, a fall of 1·6 per cent for the month. Agricultural products were 3·9 per cent lower, colonial products 1·2 per cent, industrial raw materials and semi-manufactured goods 0·6 per cent and manufactured goods 0·5 per cent.

**COST OF LIVING.**—The official index number on the base 1913-1914=100, was 118·4 for December, a fall of 0·3 per cent for the month. Food, clothing and sundries were lower, rent was unchanged and heat and light were slightly higher for the month.

### India

**WHOLESALE PRICES.**—The index number of the Government of Bombay, on the base of July 1914=100, was 99 for November, a decline of one per cent for the month. Decreases were noted in pulses, sugar, oilseeds, textiles, increases in hides and metals, while there was no change in "other food."

**COST OF LIVING.**—The official index number of the cost of living, Bombay, on the base July 1914=100, was 110 for November, an increase of one per cent for the month due to increased food prices, although there was a decline in the clothing group.

### South Africa

**WHOLESALE PRICES.**—The Census and Statistics Office index number on the base 1910=1000 was 978 for October, a decline of 2·4 per cent from the July level. With the exception of small increases in meat and fuel and light, all groups were lower than for July.

**COST OF LIVING.**—The official index number of retail prices, on the base 1910=1000, was 1268 for November, showing no change from the October level. There was a slight increase in the food group but all other groups were unchanged for the month.

### United States

**WHOLESALE PRICES.**—The *Annalist* index number, on the base 1913=100, was 82·4 for January, a decline of 4·1 per cent for the month. With the exception of a slight increase in building materials, all groups were lower than for December.

*Bradstreet's* index number which is the sum total of the prices per pound of 96 commodities of common use was \$6.5324 at February 1, a fall of 3·8 per cent for the month, which brings the index number more than 2 per cent below the previous low level reached in June 1932. Compared with January 1, provisions were 8·3 per cent lower; fruit, livestock, hides and leather, textiles, miscellaneous commodities were also lower, while breadstuffs and metals were higher for the month. Other groups showed little or no change.

*Dun's* index number, which is based on the estimated *per capita* consumption of a year's supply of commodities in wholesale markets, was \$128·435 at February 1, a decline of 1·33 per cent for the month. With the exception of an increase in the breadstuffs group, all groups contributed to the general decline.

**COST OF LIVING.**—The index number of the Department of Labour and Industries, Massachusetts, on the base 1913=100, was 122·8 for December, a slight increase over the November level. There were decreases in foods and heat and light, while clothing was slightly higher.

## FATAL INDUSTRIAL ACCIDENTS IN CANADA DURING THE FOURTH QUARTER OF 1932

THE number of fatal industrial accidents (including fatalities from industrial diseases reported with fatal accidents by workmen's compensation boards, etc., as well as fatalities to persons incidental to the pursuit of their occupations) which were recorded in the Department as occurring during the fourth quarter of 1932, was 229, there being 80 in October, 89 in November and 60 in December.

The report for the third quarter of 1932 was given in the LABOUR GAZETTE, November, 1932, page 1236. In the fourth quarter of 1931, 246 fatal accidents were recorded (LABOUR GAZETTE, February, 1932, page 235). The supplementary lists of fatal industrial accidents on page 246 contain 69 fatalities for the first three-quarters of 1932 and 6 fatalities for 1931. In this series of reports it is the custom to record industrial accidents on the dates of their occurrence, and fatal industrial diseases on the dates on which they prove fatal.

Reports were received from the provincial Workmen's Compensation Boards, the Board of Railway Commissioners for Canada, from certain other official sources, and from the correspondents of the LABOUR GAZETTE. Information as to accidents is also secured from newspapers.

Classified by groups of industries the fatalities occurring during the fourth quarter of 1932 were as follows: agriculture, 27; logging, 14; fishing and trapping, 15; mining, non-ferrous smelting and quarrying, 34; manufacturing, 28; construction, 18; electric light and power, 9; transportation and public utilities, 53; trade, 10; service, 21.

Of the mining accidents, 14 were in "metaliferous mining," 18 in "coal mining," 1 in "non-metallic mineral mining and quarrying, n.e.s.," and 1 in "structural materials."

Of the accidents in manufacturing, 2 were in "vegetable foods, drink and tobacco," 4 in "animal foods," 1 in "textiles and clothing," 3 in "saw and planing mill products," 2 in "wood products," 2 in "pulp, paper and paper products," 1 in "printing and publishing," 7 in "iron, steel and products," 2 in "non-ferrous metal products," 3 in non-metallic mineral products," and 1 in "chemical and allied products."

In construction there were 10 fatalities in "buildings and structures," 2 in "highway and bridge," and 6 in "miscellaneous construction."

In transportation and public utilities, there were 26 fatalities in "steam railways," 13 in "water transportation," 1 in "air transporta-

tion," 8 in "local transportation," 3 in "storage," 1 in "telegraphs and telephones," and 1 in "unclassified."

In trade there were 2 fatalities in "wholesale," and 8 in "retail."

Of the fatalities in service, 11 were in "public administration," 3 in "recreational," 2 in "laundering, dyeing and cleaning," and 5 in "personal, domestic and business."

There was no serious disaster resulting in the loss of a very large number of lives during the period under review. Accidents involving the loss of two or more lives were as follows:

Two men lost their lives on a farm near Lindsay, Ontario, on October 24, when a boiler of a threshing machine exploded during silo filling operations.

Two hunters were drowned in Grand Lake, Nova Scotia, when their craft upset on October 19.

Two trappers were drowned from their boat on Bass Lake, Ontario, about November 5.

Two lobster fishermen were drowned off Indian Harbour, Nova Scotia, when their craft capsized on December 8.

Two coal miners were killed by a cave-in at a surface mine at New Victoria, Nova Scotia, on November 16.

Afterdamp followed an underground explosion of gas and dust at River Hebert, Nova Scotia, on December 1, resulted in the loss of 5 coal miners' lives.

On the same date 2 miners were killed by a runaway coal car when the cable pin broke on an incline at Minto, New Brunswick.

On November 16, 4 men were suffocated in a fish packing plant at Halifax, Nova Scotia, when the building collapsed following an explosion caused by spontaneous combustion in dried fish.

Two oil refinery workers were drowned in oil when a large tank burst in Montreal, Quebec, on November 9.

In steam railways, three men were scalded to death when a valve head exploded at Toronto, Ontario, on October 6, and on October 20, three men were killed near Dryden, Ontario following an engine explosion.

In water transportation three deckhands and the assistant stewardess were drowned on Lake Erie, Ontario, on October 5, when the freighter foundered in a storm.

A truck driver and his helper were drowned when a bridge collapsed under a load of wood on October 10, at Chute aux Galets, Quebec.

### Supplementary Lists of Accidents

The supplementary list of accidents occurring during the first three-quarters of 1932, to be found after the main table of accidents, contains 69 fatalities, of which 8 were in agriculture, 4 in logging, 1 in fishing and trapping, 6 in mining, non-ferrous smelting and quarrying, 9 in manufacturing, 4 in construction, 2 in electric light and power, 12 in transportation and public utilities, 7 in trade, 15 in service

and 1 in unclassified. Two of these accidents occurred in January, 6 in February, 6 in March, 2 in April, 4 in May, 8 in June, 18 in July, 11 in August and 12 in September.

Concluding the lists is a supplementary list of accidents occurring during 1931. This contains 6 fatalities, one of which was in agriculture and 5 in fishing and trapping. Three of these fatalities occurred in October, 1 in November and 2 in December.

### FATAL INDUSTRIAL ACCIDENTS IN CANADA DURING THE FOURTH QUARTER OF 1932

| Trade or Industry                    | Locality                        | Date      | Age      | Cause of Fatality   |
|--------------------------------------|---------------------------------|-----------|----------|---|
| <b>AGRICULTURE AND STOCKRAISING—</b> |                                 |           |          |   |
| Farmer's son.....                    | Near Spruce Lake, Sask.....     | Oct. 1..  | 22       | Caught in teeth of threshing machine.                                 |
| Harvester.....                       | Near Kirriemuir, Alta.....      | " 3..     | 40       | Truck plunged over embankment.  |

## RECENT LEGAL DECISIONS AFFECTING LABOUR

### Hotel Employees not Protected by Workmen's Compensation in Ontario

A housemaid in a hotel at Windsor was removing dishes upon a tray from one of the rooms and was about to enter the service elevator, when she slipped and fell. The linoleum was in a wet and slippery condition, having recently been washed by another woman, also an employee of the hotel. As the result of the fall the housemaid's back was seriously injured. The hotel company paid her wages for some time, but when she was considered to be recovered sufficiently to undertake light work the management refused to continue payment unless she agreed to undertake some light service. This she declined to do, and brought an action against the company for damages, charging negligence on the part of the defendant "in the lack of responsible care in leaving the main corridor floor in a wet and slippery condition, when it knew, or should have known, of the exist-

ence of that condition. This condition of the floor constituted a trap and a nuisance."

The case was first heard before a jury, who found that the injury was partly due to the negligence of a fellow domestic servant, and that proper supervision had not been exercised to have the floor properly dried immediately after scrubbing. The jury also found the plaintiff guilty of contributory negligence, to the extent of 40 per cent, in not having used more caution when her vision was partially blocked by the tray she was carrying. Upon these findings the trial judge entered judgment in favour of the plaintiff for \$990 and costs.

On appeal by the defendant company the Ontario Court of Appeal reversed the decision of the lower court.

Mr. Justice Middleton observed that the finding of the jury, that the plaintiff was a domestic servant, took the case entirely out of the provisions of the Workmen's Compensation Act.

tion Act (Section 122 expressly excluding "domestic or menial servants" from the scope of the Act). "All the cases," he said, "upon the subject of the master's liability at common law for an injury sustained by a servant have been exhaustively reviewed by the Court of Appeal in the case of *Fanton v. Denville*, (1932) 2 K.B. 309. A master does not warrant to his employees that his premises are safe. He only undertakes that he will use reasonable care to see that they are safe, and he fulfils this obligation by using reasonable care to appoint persons of competent skill as his delegates. If the master satisfies these conditions, he is not liable for injury to an employee by reason of the negligence of a fellow-servant. In this case, there was no suggestion that the housekeeper was not herself entirely competent, nor was there any suggestion that she did not use reasonable care and skill in the selection and employment of the women employed to wash the floors. The most that could be said was that there was some evidence which might justify the jury in finding that there was negligence on the part of fellow-servants in the employ of the hotel company. The risk of sustaining injury by reason of such negligence is one of the risks incident to the employment which was undertaken by the plaintiff when she entered the employment."

The learned Justice of Appeal suggested for the consideration of the Legislature an amendment to the law, so that hotels would be brought under the provisions of The Workmen's Compensation Act, so that their employees may receive protection in the case of accidents which inevitably must happen.

Mr. Justice Magee, in a dissenting judgment, said: "By sec. 119 of The Workmen's Compensation Act, where personal injury is caused to a workman by reason of the negligence of his employer or of any person in the service of his employer acting within the scope of his employment, the workman shall have an action against the employer and shall be entitled to recover from the employer the damages sustained. Sec. 120 of the Act lifts the old bar of the rule as to common employment, and a workman is deemed not to have undertaken the risks due to the negligence of his fellow-workman and contributory negligence on the part of a workman shall not be a bar to recovery by him in an action for damages for which the employer would otherwise have been liable. But by sec. 121, contributory negligence on the part of the workman shall, nevertheless, be taken into account in assessing the damages. By sec. 118 these three secs. 119, 120 and 121

apply to industries to which Part 1 of the Act does not apply and to employees excluded from the benefit of Part 1. Then sec. 117 limits the application of Part 1 to the industries mentioned in schedules 1 and 2 of the Act, and such other industries as may be added to them. Under Part 1, the Workmen's Compensation Board is constituted and power is given the Board (by secs. 83 to 87) to rearrange the classes of industries in schedule 1 and exclude any industry from the operation of part 1 and add any industry to any of the classes in either schedule, and by secs. 12 and 14 no action shall lie for the recovery of compensation for injuries, but all claims shall be determined by the Board. The provisions of Part 1 are in lieu of all rights of action to which a workman may be entitled against an employer.

"In neither of the two schedules is the business of hotel-keeping mentioned, and therefore Part 1 does not apply to it, and so secs. 119, 120 and 121 apply if hotel keeping is an industry to which the Act applies and if the Act is applicable at all. By sec. 1 the word 'industry' in the Act includes establishment undertaking trade and business, and 'workman' includes a person who works under a contract of service express or implied, whether by way of manual labour or otherwise, and 'employment' includes employment in an industry or any part, branch or department of it. Hotel-keeping would, therefore, be an industry, and the plaintiff, as a 'workman,' would be entitled to the benefit of secs. 119, 120 and 121, unless the last section of the Act, sec. 122, interferes. That section declares that the Act shall not apply to the industry of farming or to domestic or menial servants or their employers. Was the plaintiff either a domestic or menial servant within the meaning of the Act? The word 'domestic' implies a home not a business, and the word 'menial,' whether derived, as in Wharton's Law Lexicon, from the Latin 'moenia,' or as in other dictionaries, from the French 'mesnie,' and ultimately like 'mansion,' from the Latin 'maneo,' always has the implication of household. Even if it could be said that the plaintiff was a domestic or menial servant, yet being employed in the operation of the industry she cannot be excepted from the employees of that industry, all of whom are equally protected by the Act. In both views, therefore, the plaintiff would be entitled to recover if injured by the negligence of a fellow-employee."

*Duncan versus Norton-Palmer Hotel Company Limited (Ontario)*, 1933, *Ontario Weekly Notes*, page 20.

### Duty of Employer to use Reasonable Care for Safety of Employees

The English decision in *Fanton versus Denville*, cited in the foregoing judgment, concerned an action for damages against a theatrical company by an actor who had sustained personal injuries during a rehearsal, his part in the play requiring that he should fall through a trap to a mattress beneath. He alleged that it was the duty of the defendant to provide fit and safe machinery, plant and properties, and that it was the defendant's duty or that of his servants to take reasonable precautions to prevent dangers to the plaintiff. In particular the plaintiff alleged that the defendant or his servants failed to provide a sufficient mattress to make the plaintiff's fall safe. The case was heard by Mr. Justice Hawke and a jury, who allowed the plaintiff's claim, damages being granted for £93-1s.-6d.

On appeal, the Court of Appeals reversed the decision of the lower court. Lord Justice Scrutton, after a review of previous decisions in reference to similar cases, found that an employer does not warrant to his employees that the plant and property used in his business are safe; he only undertakes that he will use reasonable care to see that they are safe, and he fulfils this obligation by using reasonable care to appoint persons of competent care and skill as his delegates to provide and use the plant and property required for the business, he supplying them with the necessary financial means for this purpose. If the employer satisfies these conditions he is not liable for injury caused to one of his servants by the negligence of such a delegate in the use of the plant.

Lord Justice Greer, in the course of his judgment (which was also to the same effect as above) said: "The decision of the Privy Council in *Toronto Power Company versus Paskwan* (1915, Appeal Cases, page 734) seems to me inconsistent with the whole trend of English decisions, and, being a decision on the law of Canada, is not an authority which we are bound to follow".

*Fanton versus Dunville* (England) 1932, 2 King's Bench cases, page 309.

### Workman's Claim for Municipal Fair Wage Rate

Action was brought by a workman against a contractor for the payment of additional wages in consideration of the terms of an agreement between the contractor and the city of Montreal. The plaintiff, a carpenter-joiner, admitted having received 60 cents an hour, whereas the contractor's agreement with the

city called for the payment of 85 cents an hour to "carpenters and joiners". It appeared, however, that the plaintiff's work had, in fact, consisted either in superintending other workmen, or in pouring concrete into ready-made forms which had only to be assembled on the job. The Court considered that such work was not strictly that of a "carpenter-joiner", and that the rate stipulated in the agreement for that class of labour did not therefore apply to the work done by the plaintiff. Accordingly the plaintiff's claim was not allowed except in regard to work he had done in building a garage, for which the contractor had paid him at the rate of 85 cents an hour. Reference was made in the judgment to *Juneau versus Plamondon et Cité de Quebec* (LABOUR GAZETTE, September, 1931, page 1052).

*De Blois versus Loranger* (Quebec) 1932, *Rapports Judiciaires de Québec* (Cour Supérieure), vol. 70, page 513.

### Scope of Minimum Wage Order in Quebec

A female employee in the shoe industry at Montreal brought an action against her employer for arrears of wages, the arrears claimed being equal to the difference between the amount she had actually received, and wages at the rate of \$12.50 as fixed by the Women's Minimum Wage Board as the minimum rate for experienced workers in this occupation in Montreal (LABOUR GAZETTE, May 1929, page 489). The defendant company alleged that the plaintiff's work did not require experience of any kind, consisting in lacing shoes, washing the soles, and attaching tags to boxes, and that the Minimum Wage law therefore did not apply to the case. Moreover the company stated that the claimant in January, 1932, had signed a request to the Board for permission to work at a lower rate than was fixed in the order, and that the Board had granted such permission. The Court held that the claimant's occupation (except perhaps the attaching of tags to boxes) came within the scope of the Board's order, and that lengthy experience enabled her to work faster and with greater profit to her employer. The special permission given to the company by the Board in January, 1932, not being retroactive, the judgment therefore allowed the plaintiff's claim in regard to the period of her employment before that date, the total arrears of wages being \$429, interest and costs being also allowed.

## NOTES ON CURRENT MATTERS OF INDUSTRIAL INTEREST

A DECREASE was noted in industrial employment in Canada at the beginning of February, according to returns received by the Dominion Bureau of Statistics from 7,956 firms, each with a minimum of fifteen employees. The staffs of these firms on February 1 aggregated 706,478 persons, as compared with 722,448 on January 1. This decline brought the index (average 1926=100) down to 76.8 from 78.5 in the preceding month, while on February 1, in the last twelve years it was as follows:—1932, 89.7; 1931, 100.7; 1930, 111.6; 1929, 110.5; 1928, 102.0; 1927, 96.6; 1926, 91.8; 1925, 87.1; 1924, 91.7; 1923, 90.6; 1922, 79.9; 1921, 91.2. The returns are representative of employment in all industries except agriculture, fishing, hunting and highly specialized business.

At the beginning of February, 1933, the unemployment percentage reported to the Department of Labour by local trade unions stood at 25.5, the same percentage as was reported at the beginning of January, 1933, while at the beginning of February, 1932, 22.0 per cent of idleness was recorded. The percentage for February was based on the reports furnished to the Department of Labour by 1,808 labour organizations, including a membership of 156,746 persons.

Reports received by the Department of Labour from offices of the Employment Service of Canada showed declines from December, 1932 and from January a year ago in the volume of business recorded, as shown by the average daily placements effected, the heaviest loss under the former comparison taking place in services and under the latter, in construction and maintenance. Vacancies in January, 1933, numbered 28,602, applications 56,873 and placements in regular and casual employment 27,304.

The average cost per week of a list of twenty-nine staple foods for an average family of five in terms of the average retail prices in sixty-nine cities was again lower at \$6.70 for February as compared with \$6.94 for January; \$7.34 for February, 1932; \$9.44 for February, 1931; \$11.83 for February, 1930; \$10.61 for February, 1922; \$15.77 for February, 1920; \$16.92 for June, 1920 (the peak);

and \$7.75 for February, 1914. In wholesale prices the index number calculated by the Dominion Bureau of Statistics was also lower at 63.6 for February as compared with 63.9 for January; 69.2 for February, 1932; 75.5 for February, 1931; 93.9 for February, 1930; 95.0 for February, 1929; 98.3 for February, 1922; 164.3 for May, 1920 (the peak); and 64.8 for February, 1914.

The loss in working time caused by industrial disputes in Canada in February, 1933, was much greater than that recorded for January, 1933, and was also greater than the corresponding loss in February, 1932. Five disputes were in progress at some time during the month, involving 4,450 workers and resulting in the loss of 58,500 working days. Corresponding figures for January, 1933 were: eight disputes, 622 workers, and 5,936 working days; and for February, 1932, Eighteen disputes, 3,360 workers and 10,452 working days.

### Industrial Disputes Investigation Act.

During the past month the Department received reports from the Boards of Conciliation and Investigation established in connection with disputes (1) between the Winnipeg Electric Company and their motormen, conductors, etc., and (2) between the Canadian National Railways and their locomotive firemen and enginemmen. A board was established in connection with a dispute between the two principal railway companies and their locomotive engineers, firemen, conductors, trainmen and telegraphers, arising out of a proposed reduction in rates of pay to an amount 20 per cent below the basic rates of pay specified in the agreements. The text of the two reports is included in the account of the recent proceedings under the Act which appears on page 266 of this issue.

### Validity of Quebec workmen's compensation legislation

Elsewhere in this issue will be found an outline of the judgment of the Court of Appeals of the Province of Quebec, maintaining the appeal of the Attorney General of the Province against the recent judgment of Mr. Justice de Lorimier of the Superior Court in the

case of *Slanec versus Grimstead et al* (LABOUR GAZETTE, June, 1932, page 733). The Superior Court held that the Legislature had exceeded its authority by providing for the establishment of a commission having judicial powers, the British North America Act having vested in the Dominion Government the power of appointing judges. The Court of Appeals, on the other hand, declared the legislation constitutional, holding the functions of the Commission to be administrative rather than judicial.

Following upon the judgment of the Court of Appeals, it was announced that the provincial government would introduce legislation to declare that no action at common law shall lie in cases of accidents to workmen who come under the provisions of the Workmen's Compensation Act.

#### **Methods of paying wages of delivery men.**

Criticism of the method followed by some bread companies in paying wages to their drivers or delivery men was made by judge Cayley in a County Court in British Columbia in a case reported among the "Recent Legal Decisions" at the end of this issue. The company in this case made a practice of holding their drivers responsible for the debts of customers, even when such debts had been authorized by the management. Not only did this company charge the customers' defaults to the driver, but they made an assessment of one or 1½ per cent on the weekly wages of the driver to make good such defaults. In regard to such practices His Honour said: "I think the whole system of charging up customers' defaults to the drivers or delivery men is inequitable and would not stand investigation by the Courts."

#### **Six-hour day bill in Quebec Legislature**

A bill to provide for the limitation of working hours was introduced during February in the Legislature of the Province of Quebec by the Hon. C. J. Arcand, Minister of Labour of the Province. The preamble states that "the economic crisis throughout Canada and in this province is depriving a great many workmen of work and obliges the State to come to their assistance to meet their needs and those of their families"; that "serious economic troubles result therefrom"; and that "a better distribution of labour would tend to relieve this situation by affording to a greater number of workmen, who ask no more than to work, an opportunity to do so." The Bill, therefore, would enable the Lieutenant-Governor in Council to fix the number of hours per week or per day, during which a workman employed in manual labour may work. Such a limitation of working hours would be for such districts and for such types of industry and

classes of workmen, and for such periods, as may be fixed by order in council. No such limitation would be decreed for industries that are subject to competition from other provinces or countries. In no case would the limit of working hours be less than six hours per day or thirty-three hours per week, "so that, as far as possible, work may be assured for two or more crews of workmen employed at the same work." Before any limitation of working hours is decreed the associations of employers or workmen concerned must be consulted. Exceptions to the prescribed hours would be permitted where they are deemed necessary. The Act, if passed by the Legislature, would be effective upon its proclamation, and it might be repealed in the same manner.

In the Saskatchewan Legislature, on March 4, the Hon. J. A. Merkley, Minister of Railways, Labour and Industries, introduced legislation to provide for a six-hour day and a five-day week for the building trades in that province for a period of one year.

#### **30-Hour Week Bill before United States Congress**

A bill is before the United States Senate to forbid the shipment in inter-State commerce, of the products of factories which employ workers more than thirty hours in a week. During February a sub-committee of the Senate Judiciary Committee reported favourably upon the bill, which had been introduced by Senator H. L. Black, of Alabama. A similar bill, brought into the House of Representatives by W. P. Connery, of Massachusetts, was recommended by the House Labour Committee. Senator Black predicted that the 30-hour week would within a comparatively short time return 6,500,000 persons to employment and also that farmers and business men would benefit materially from the resulting increase in purchasing power.

The Saskatchewan Legislature discussed in February a motion that "the government should consider whether the reorganization and improvement of the medical services of the province can be effected by providing for a system of medical services supported by local rates supplemented by government grants." The following suggestions were made by Mr. Charles McIntosh, who introduced the motion: (1) health districts of convenient size; (2) a physician to attend to each district; (3) tax on basis of equalized assessment or some comparable scheme; (4) state aid and state supervision through a commission free from political interference; (5) Regulations for the protec-

tion of the public and the medical profession, with provision for proper remuneration and superannuation of the latter; (6) the same health facilities to urban areas. According to reports in the press these proposals were almost unanimously favoured by the members who took part in the discussion. The plan here proposed would enlarge the municipal doctor system, already in operation in several districts, so as to cover the entire province.

On March 3, the Saskatchewan Medical Association, in annual convention at Saskatoon, approved recommendations submitted by a special committee which had been conferring with members of the Association on the subject of arrangements for the satisfactory care of indigent sick within the municipalities. The committee proposed that the Association should accept from rural councils, for medical services rendered to persons at present unable to pay, payment at 50 per cent of the minimum doctors' schedule of fees. The Association also recommended the holding of a conference of the representatives of such interested organizations as the departments of public health and municipal affairs, urban and rural municipal organizations, hospital associations and the medical profession, for the purpose of studying the whole question of health in Saskatchewan and of finding a permanent solution for the adequate administration of health in the province.

Reference to the Saskatchewan "municipal physician" plan was made by D. A. Grant Fleming, of McGill University, in the course of a recent address at Montreal on "the socialization of medicine." He pointed out that in no municipality where the system had been inaugurated had it been discontinued. Medical practitioners, he said, while willing to give free service up to a certain point, feel that a large part of the burden should be borne by the state.

In the House of Commons  
**Local authorities** on February 16, Mr. J. L.  
**fix rates of** Duguay (Lake St. John),  
**direct relief** directed the following ques-

tions to the Minister of Labour: "I am informed that in certain municipalities in my county instructions have been given to reduce the rates of direct relief, and it is reported also that these instructions were issued by the federal government. Will the minister inform the house upon whose authority the rates for direct relief are fixed and if the federal government has issued instructions that these rates shall be reduced in the province of Quebec."

The Hon. W. A. Gordon replied as follows: "In reply to the first two questions I would say that in the case of his district or any

other district in the province of Quebec or elsewhere in Canada no instructions have been issued by the federal government to reduce the amount of direct relief to be granted to those in need. The only conditions which this government has at any time laid down with respect to direct relief have been to define direct relief as consisting of food, fuel, clothing and shelter or the equivalent thereof, and that there shall be no discrimination in the granting of relief to any applicant by reason of political, racial, religious or other considerations. No limit has ever been set by this government to the amount of relief which shall be granted to any applicant, this being constitutionally a matter wholly within the determination and judgment of the local authorities. It will also be obvious to members of the house that, even aside from the constitutional aspect, such matters are properly for the local authorities to determine. Answering my hon. friend's third question, 'On whose authority rates for direct relief are fixed?' I would say that municipalities must determine, first, whether relief shall be granted, and, second, to whom and in what amount it shall be granted. I also presume that such decisions on the part of municipalities receive provincial approval. As a matter of fact I am informed and understand that in Quebec the provincial government determines the amount which may be expended in each municipality on direct relief.

"Answering the hon. member's last question, 'Has the federal government issued instructions in the province of Quebec to reduce the amount of relief?' The answer is no. This government has been most careful never to invade in any manner the jurisdiction of either the provincial or municipal authorities either in our relief legislation or in the administration thereof."

#### **Provincial relief measures in Manitoba**

The Speech from the Throne at the opening of the Manitoba Legislature on February 14, after a reference to the adverse conditions in the Province, announced that the government would submit a proposal "urging still further co-operation between the provinces and the Dominion in a united attempt to bring about an adjustment upwards of prices of primary products and an adjustment downward of the interest burdens made heavier by the unprecedented decline in prices of most of our products.

"While an increase in the prices of basic commodities or relief from the oppressive burden of interest, and other more or less rigid charges, is essential to any permanent remedy for the present condition, the difficulties in which farmers and others are placed

by the extreme decline in the prices for the products of their industry, resulting in almost a total collapse of their purchasing power, warrants our most serious thought and action. You will be asked to give consideration to the causes of and possible remedies for the wide variation between the prices paid the producer for his primary products and those charged the consumer of both primary and manufactured goods.

"The loss of the purchasing power of our people having caused increase in unemployment in villages, towns and cities to the extent that close upon one-tenth of the population is in need of assistance, the plain dictates of humanity compel the organized authorities to do all that is possible in providing food, shelter, fuel, and clothing when necessary. The total cost of relief works and direct relief by the government of the province, by municipalities and by the federal government has amounted to close upon half a million dollars a month during more than two years, to say nothing of the relief given privately. While the cost has been greatly reduced by changes in method, it is still proving to be a very heavy burden to the municipalities and the governments of the provinces and the Dominion, with their falling revenues and their increasing difficulty in balancing their budgets. You will be asked to give careful and sympathetic consideration to the administration of relief by the Dominion, the province and the municipalities, and the financial aspects of the problems presented by that work, particularly in Winnipeg and Greater Winnipeg.

"In the meantime, in view of the high costs of unemployment your approval will be asked to a request to the Dominion government to loan for the municipalities and the province the moneys necessary for unemployment relief purposes in order to avoid the excessive interest rates that the municipalities and the province will otherwise be required to pay.

"In view of the magnitude and international aspect of the unemployment and related problems of the depression and the necessity of remedying them at the least cost and at the earliest opportunity by the most effective means available, namely, international agreement, you will be asked to place on record your earnest support of any action that may be taken by the interested nations to bring about as the first necessity of a return to normal conditions the cancellation or a radical reduction of reparations and war debts; and you will be asked to urge upon the representatives of Canada at the coming world conference the necessity of using their best efforts to bring about international cooperation in securing (a) the raising of prices of primary products; (b) the reduction of the

existing barriers to world trade; (c) the stabilization of the monetary system; and (d) the lessening of expenditures on armaments."

The Speech also intimated that amendments would be proposed to increase the effectiveness of the Debt Adjustment Act of 1932, which was found to have "provided security against the possible dispossession of many farmers and home owners, and otherwise furnished a considerable measure of relief."

### **Work of Technical Schools at Hamilton, Ontario.**

More than ninety apprentices attending the Hamilton Technical Institute and the Westdale Technical School (Hamilton) were entertained on March 3, by the Hamilton Construction

Association on the occasion of the annual presentation of prizes. The students came from all parts of Ontario to receive a two-months' course of training in the various building construction trades. As in previous years they attended classes eight hours per day, forty-four hours per week, devoting one-half time to trade practice and the balance to instruction in related subjects, including blue-print reading, mathematics, chemistry and physics directly related to the trades, and business English. The classes held during January and February this year were considered to be the most successful so far conducted at the two institutions.

Mr. A. W. Crawford, Deputy Minister of Labour and Chief Inspector of Apprenticeship for Ontario, addressed the apprentices, expressing his appreciation at the excellence of the exhibits of their work, and of the exceptionally good attendance at the classes, which had been 100 per cent in some departments. He congratulated Mr. L. W. Gill, principal of the Hamilton Technical Institute, and Mr. D. W. Bates, principal of the Westdale Technical School, on the manner in which they had carried out their duties.

Mr. J. B. Carswell, chairman of the Ontario Apprenticeship Board, presented the prizes to the best students in the following subjects: plastering; painting and decorating; brick-laying and masonry; carpentry; plumbing and steamfitting; electrical work; and sheet metal work.

### **Wider use of technical schools recommended**

Dr. W. G. Carpenter, Director of Technical Education for the Province of Alberta, addressing a meeting of a recently formed Technical Teachers' Association at Edmonton, advocated a much more extensive use of technical education by young people of high school age, suggesting that at least half of those now attending high schools at Edmonton should be at the technical schools. He stated that at the

present time, 25 per cent of Edmonton high school pupils were in commercial schools, 12 per cent in technical schools and the remaining 63 per cent were in academic work. Contrasting this distribution of the pupils with their vocational destiny, he said that in their later life, some five per cent followed up the academic training leading to the professions and about 20 per cent engaged in commercial work, while the remaining 75 per cent became identified with manual occupations. He concluded that at least 50 per cent of the students should be given technical education.

### **Need for trained social workers to dispense relief.**

The Industrial Commission of Wisconsin recently issued a pamphlet under the title "Unemployment Relief in Wisconsin, 1932-1933," making suggestions, based on the experience of the Commission during the past three years, as to the manner in which the large sums raised in the State for relief purposes should be allocated and administered. Over twenty million dollars of public funds were expended for unemployment relief in Wisconsin during 1932, and about twenty-six millions are likely to be expended in 1933.

The Commission strongly recommends that in the interest both of the taxpayers and of the unemployed, the disbursement of relief should be in charge of properly qualified agents. Their recommendations on this subject agree with those recently made by the Canadian Association of Social Workers (LABOUR GAZETTE, December, 1932, page 1249). "The taxpayer," the pamphlet states, "has a right to know that his money is being expended efficiently and that the use of his money is not tending to create a permanent class of paupers. The person who, through no fault of his own, is now unemployed and must ask for public assistance has a right to be treated as a self-respecting citizen. The kind of relief given him and the way it is given must be such as will maintain his health and his morale. Society gains little through the expenditure of this vast sum of money for unemployment relief, if the result is merely keeping so many thousands of families alive, at a sacrifice of their self-respect and initiative.

"For these reasons the Commission has insisted that qualified persons with social work training be put in charge of relief agencies. Special technique is required in getting at the actual facts with regard to a family's need for relief just as is required by a doctor to diagnose a disease. In ordinary times the restraining influence of stigma kept persons from asking for relief until it was absolutely necessary. After three winters of unemployment on a large scale the stigma has been very largely removed, and there is a temptation for some families to ask for relief before it is absolutely

necessary. With an untrained person the investigation becomes largely a contest of wits to obtain or reject relief; with the person trained in the technique of case work the investigating visit is a conference between the worker and client whereby avoidance of unnecessary relief is the object of both. With an untrained person in charge, unemployment relief is apt to be merely a doling out of food and clothing. While the trained social worker is very much concerned about the recipient's mental attitude and what the effect of giving relief is likely to be in his attitude towards society and his relationships to it. The cost of adequate and trained personnel in every relief agency is small when the amount of funds at their disposal is considered. On the average, less than 8 per cent of the amount of money spent for relief goes for administration".

### **Progress of Co-operation in Nova Scotia**

The *Canadian Co-operator* February, 1933, gives particulars regarding a co-operative store which was founded in the fishing community of Port Felix, Nova Scotia, in April, 1930, and has been conducted with considerable success. The building in which the store is housed cost the society only \$341, the labour and materials being given free, "a manifestation of individual sacrifice of time and material for community service not unusual where the true spirit of co-operation prevails."

"The sales for the first year were \$5,599.49 but for the second year they were \$7,935.29; in other words an increase in money values, notwithstanding the decline in prices in the meantime, of 41.71 per cent. At the end of the second year the current assets were of the value of \$3,003.94 and the fixed assets \$1,465.00, a total of \$4,468.94. Since the society commenced operations its capital of \$100 has increased to \$624. It has been able to appropriate to a reserve fund for educational purpose \$50, and to create a net surplus of assets over liabilities of \$2,588.25. The same, with current liabilities of \$1,206.69, make a total of \$4,468.94, thus balancing the assets. The par value of the shares is \$25 and each member must pay up 40 per cent, or \$10. There is an understanding that the members must leave their purchase dividends in the store untouched for a period of four years, in order that the business may expand more rapidly.

"Last spring a few fishermen of the locality decided to start a lobster factory. Owing to lack of funds the project nearly failed. Some attempts were made to borrow the necessary amount from one of the chartered banks, and from several individuals, but without avail. The only possible source of financial assistance left to the fishermen was the co-operative

store. While it was felt the attempt to give aid was rather hazardous after only two years of business operation, the members saw their way to co-operate, with the result that a co-operative lobster factory was built in March, 1932. Operations were started on April 6 last and the venture has been made a success, about 400 cases of lobster having been canned. Thus were the collective savings effected by fishermen as consumers utilized to the advantage of fishermen as producers. In the Spring the organization of a Credit Union, or local co-operative bank, is in contemplation."

A note on the credit union movement in Nova Scotia appeared in the last issue of the LABOUR GAZETTE, page 191.

### Canadian National Railways safety objective in 1933

Mr. S. J. Hungerford, acting president of the Canadian National Railways, recently addressed a personal message to all supervisory officers and foremen on the system, announcing that the Accident Prevention Department had set up a 15 per cent reduction in employee casualties as an objective for 1933. "With your co-operation this goal can be achieved," he said. "The expenses of every industry comprise a large item of cost chargeable to waste. This waste may consist of time, money, materials or men—but by far the most important of these is men. In connection with the latter it could be remembered that 98 per cent of all personal injuries are preventable. Our Accident Prevention Department estimates the annual waste of man-power and materials on our system due to accidents at a very large sum of money and finds that as compared with other large railways on this continent our record should be materially improved. Hence it is vitally important that we examine our individual accident situation with a view to bettering it."

### Occupation statistics in United States census, 1930

The United States Bureau of the Census recently published a summary of occupation statistics of persons gainfully occupied, as shown in the Fifteenth Census, 1930. The census showed that of the total population of 122,775,046, the number of persons 10 years old and over who were gainfully employed was 48,829,920 (38,077,804 male and 10,752,116 female). The largest group, manufacturing and mechanical industries, had 14,110,652 of these workers, followed by agriculture with 10,471,998; trade, with 6,081,467; domestic and personal service, with 4,952,451; clerical occupations, with 4,025,324; transportation and communication, with 3,843,147; professional service, 3,253,884; extraction of minerals, with 984,323; public service (not

elsewhere classified), with 856,205; forestry and fishing with 250,469.

The percentage of workers engaged in agriculture was 21.4 of the total number of gainful workers, as compared with 25.6 in 1920, and 32.5 in 1910. The percentage of female agricultural workers showed a marked decline, being 8.5 of the total number of female employees, as compared with 12.7 in 1920 and 22.4 in 1910. Manufacturing and mechanical industries engaged 28.9 per cent of the total number of workers (30.8 in 1920 and 27.9 in 1910). Trade engaged 12.5 per cent (10.2 in 1920, and 9.5 in 1910). The "domestic and personal service" group included 10.1 per cent of the total (8.1 in 1920 and 9.8 in 1910).

### Registration of trade unions in Great Britain

The registration of trade unions was first permitted by the Trade Union Act of 1871, the principal Act which governs these bodies. The main purpose of the Act was to relieve trade unions and their members from some of the disabilities which they suffered because their associations were combinations in restraint of trade. Registration under the Trade Union Act was permitted to such trade unions as chose to register, but registration under the Friendly Societies, Industrial and Provident Societies, or Companies Acts was forbidden. Associations, both of masters to regulate the relationship with their workpeople and of persons engaged in trade or business to impose restrictive conditions on such trade or business, are in law trade unions, and have the same privileges and are subject to the same conditions as trade unions of workpeople. Although a number of unions of employees, mostly small, are still not registered, the registered unions of employees are believed to comprise about 80 per cent of trade unions membership. In regard to trade unions of masters and traders the position is probably reversed, only the small and less powerful being registered.

The office of the Chief Registrar of Friendly Societies deals with annual returns furnished by unions under the Trade Unions Acts, the returns being often sent back for correction. The Trade Union Acts do not require unions to have their accounts audited by professional accountants, and, for the most part, they prefer to choose their auditors from among their own members, but in view of the inaccuracy of the annual returns the Registrar has, in many instances, considered it his duty to recommend the employment of professional auditors. About one-third of the unions now employ professional auditors.

The number of registered Trade Unions in 1930 was 474, having 3,764,348 members. The membership of unregistered unions was estimated at over half a million persons.

## GENERAL REVIEW OF THE INDUSTRIAL SITUATION

### Employment

THE employment situation throughout Canada at the end of February was reported by superintendents of the Employment Service of Canada to be as follows:—

Few requests for farm help were received in Nova Scotia, and continued mild weather had handicapped all lumber operatives, both in hauling and in working their mills. Due to ice conditions, fishing was only fair. Mines in the New Glasgow area operated from three to six days per week, while those in Cape Breton and vicinity worked only one or two days per week. Bakers reported business good, confectioners and mineral water manufacturers fair, and oil companies poor, while some idleness prevailed in sections of the iron and steel industry. Building construction showed no activity, and about the only work available was that provided by the various relief measures. Passenger transportation by rail and steamship showed some improvement at Halifax, due to special rate excursions, but, elsewhere, was only fair. Trade was slow, with collections poor. Few requests were received for household domestics and commercial vacancies were nil.

Local farmers in the vicinity of Moncton, N.B., were busy getting their equipment ready for the coming maple sugar season. Apart from this, there was not much activity in agriculture. Fishing was fair. Woodsmen had resumed operations in the pulpwood area, and reported deep snow in the northern timber limits. Manufacturing showed little change. Carpenters at Saint John were busy, but elsewhere quietness prevailed in this industry. Passenger transportation had been heavy, due to special excursions, while longshore work was only fair. Wholesale houses were busy with spring stock, but retail trade reported a small volume of business. There was the usual demand for casual help in the Women's Domestic Section.

Farming was quiet in the Province of Quebec, also logging, only one district showing any activity in the latter division. Manufacturing registered improvement at Hull, but at Montreal no change for the better was in evidence. In Quebec City, factories were operating on reduced time, and at Three Rivers they were working at less than 50 per cent of their capacity. Mining was slightly more active. Few orders were received for the building trades, although Hull expected some construction work to open up shortly. The Municipality of Montreal still employed a large number of workers for sewer con-

struction and unemployment relief work, and at Quebec City work was afforded on road maintenance. Only urgent repairs were being looked after at Three Rivers. Slackness prevailed in transportation, and retail trade throughout the province was quiet. The greatest activity shown was in the Women's Domestic Section, where large numbers of vacancies were listed, with an ample supply of applicants to meet all requirements.

The demand for farm hands throughout the Province of Ontario remained very small, although a number of farmers were enquiring about help for the spring. Lessened activity was noticeable in lumber camps, as the cuts were nearing completion and sleigh hauling well started. Few extra men would be required until the spring drives, but in all lumbering districts it was expected that plenty of help would be available. Quietness prevailed in the mining districts, few additional men being hired. Textile factories were busy, and several of the firms in the iron and steel trade reported a slight improvement, which resulted in a more optimistic feeling among a large number of manufacturers. With the exception of city and provincial relief work, the volume of employment in the construction group was at a low level. Highway camps remained filled to capacity. A better demand for housekeepers and cooks-general was evident in the Women's Domestic Section, but in some cases experienced help was difficult to obtain. There were, however, plenty of applicants available for all casual work offered.

A slight increase was recorded for farm help in Manitoba, a few enquiries being made regarding spring help. Logging and mining were quiet, but a very slight improvement was reported in manufacturing. Little work was available in building construction, only two dwellings having been started in Winnipeg thus far in 1933. The movement to relief camps was somewhat greater. Relief work on a two weeks' rotation basis was also provided for the unemployed at Brandon. Retail trade was slow, but wholesale groceries reported the volume of business as fairly satisfactory. There was a marked gain in registrations in the Women's Domestic Section. Fewer day workers were called for, but more orders received for domestics, both for city and country employment.

Requests concerning farm labour for spring activities were beginning to be made in Saskatchewan, but no wages had been set as yet. In some districts competent help was scarce, and difficulty was experienced in filling posi-

tions, even where wages were offered. With the return of mild weather, wood hauling was resumed and farmers and homesteaders were occupied taking cordwood to the cities. Mines at Estevan were busy, and with one exception,

all were working full time. There was no building construction underway, and only a fair call for casual or miscellaneous help, with an increase in the number of applicants. Relief work was still provided in some municipalities.

## MONTHLY STATISTICS REFLECTING INDUSTRIAL CONDITIONS IN CANADA

(Official statistics except where noted)

(1) Calculated from yields of Ontario bonds.

(2) For group figures, see articles elsewhere in this issue.

(3) Bradstreet.

(4) Figures for end of previous month.

(5) Figures for four weeks ending February 25, 1933, and corresponding previous periods.

(6) Sugar production given in periods of four weeks ending January 28, 1933; December 31, February 27 and January 30, 1932; and December 31, 1931.

(7) Including lines east of Quebec.

(8) MacLean's Building Review.

(9) The index of the physical volume of business includes forestry, mining, construction, manufacturing, trade, imports, exports, car loadings, shares traded and bank debits. Industrial commodity production includes forestry, mining, manufacturing and construction. Manufacturing includes production of flour, sugar, newsprint, pig iron, steel and automobile; imports of cotton, rubber, wool and petroleum; slaughterings of cattle, sheep and hogs; storage holdings of butter and cheese.

There remained a large number of unfilled orders for domestics and housekeepers under the Government Relief Scheme, with a scarcity of workers that could qualify for the same. All other orders with wages were easily filled.

The demand for farm help was well maintained in the Province of Alberta, and a number of men were sent out under the Farm Relief Plan. This Act to date has proved most satisfactory, with few complaints received from employers or employees, and there was the possibility that most of the men engaged under this scheme would be retained for spring work. Logging was moderately brisk, but not much call for men. Coal mining at Edmonton was fairly good, but with warmer weather prevailing, it was expected that some of the mines at Drumheller would soon close for the season. No change took place in manufacturing, nor was any activity noted in building construction, and, except for city relief, little work was available. No change was shown in the Women's Domestic Section, a number of unplaced applicants being registered at the offices.

Farming was quiet in British Columbia, but there appeared some improvement in logging in the Nanaimo district, where a number of men were working at camps and sawmills, also at upper coast points from Vancouver, where camps had been forced to close due to heavy snowfalls, milder weather prevailed, which would enable these to re-open. Mining was slack, also manufacturing. At Penticton, however, the Co-Operative Fruit Growers had decided to put about seventy-five tons of apples through the evaporating plant, as certain varieties of this fruit could not be kept indefinitely, about nine hundred cars of apples in the Okanagan Valley remaining unsold. The re-opening of this plant would provide work for approximately twenty people. Outside of relief projects, there was little activity in building construction. Longshore work continued good at New Westminster and Victoria, but was extremely quiet at Prince Rupert and Vancouver. Trade was comparatively slack, with collections slow. In the Women's Domestic Section the usual number of orders were received, which were filled immediately, but a number of unplaced applicants had found it necessary to apply for direct relief.

#### EMPLOYERS' REPORTS

Employment showed a falling-off at the beginning of February; the Dominion Bureau of Statistics tabulated returns from 7,956 firms, whose staffs aggregated 706,478 persons, as compared with 722,448 on January 1. Reflecting this decline, the index (average 1926=100)

stood at 76.8 at the beginning of February, while in the preceding month it was 78.5, and on February 1, in the years since 1921 it was as follows: 1932, 89.7; 1931, 100.7; 1930, 111.6; 1929, 110.5; 1928, 102.0; 1927, 96.6; 1926, 91.8; 1925, 87.1; 1924, 91.7; 1923, 90.6; 1922, 79.9 and 1921, 91.2, respectively.

Reductions were recorded in all provinces, those in Quebec and the Prairie Provinces being most pronounced. In the Maritime Provinces, coal mining reported the heaviest losses, but decreases were also indicated in manufacturing, construction and trade, while transportation and logging were seasonably brisker. In Quebec, manufacturing remained practically the same as in the previous month, but a falling-off in employment was noted in other groups, the greatest declines being in logging, trade and transportation. In Ontario, considerable gains were made in manufacturing, notably in the iron and steel, textile, pulp and paper and leather divisions; services, mining and logging also reported heightened activity, while there were large seasonal reductions in trade, transportation and construction. In the Prairie Provinces, manufacturing and logging were more active; construction reported fewer employees, while seasonal shrinkage was also recorded in trade and transportation. In British Columbia, increases in manufacturing (notably in edible plant, textile and paper products) were offset by declines in construction, logging, transportation, communications, services and trade.

The trend of employment was downward in Montreal, Quebec City, Toronto, Ottawa, Winnipeg and Vancouver, while in Hamilton and Windsor and the adjacent Border Cities a favourable tendency was in evidence. In Montreal, manufactures registered considerable recovery, especially in the footwear and iron and steel groups, but large seasonal losses occurred in trade and water transportation. In Quebec, manufactures reported curtailment, and trade was seasonally dull. In Toronto, heavy seasonal decreases took place in trade, and construction was also slacker, but there were important gains in manufacturing, notably of textile and edible plant products. In Ottawa, manufacturing, transportation and trade reported moderate declines, while construction was rather more active. In Hamilton, employment showed an improvement, mainly in iron and steel. In Windsor and the adjacent Border Cities, considerable recovery was indicated, chiefly in automobile plants. Conditions were also more favourable in construction and trade. In Winnipeg, the number employed showed a contraction, mainly in retail trade and communications, while a small improvement was indicated in manufacturing. In Vancouver, construction, transportation and

trade reported reduced activity, but manufacturing was brisker.

An analysis of the returns by industries shows improvement in manufacturing, notably in the iron and steel, textile, leather, lumber and pulp and paper industries. On the other hand, there were losses in edible animal products, tobacco manufacture, rubber, electric appliance and some other plants. Logging, communications, transportation, construction and trade reported curtailment, that in construction and trade being most pronounced.

An article elsewhere in this issue gives in some detail the employment situation as at the beginning of February, 1933.

Activity for local trade union members at the close of January, 1933, remained at exactly the same level as in the previous month, the 1,808 labour organizations making returns in January with 156,746 members, showing that 39,909 of these, or 25.5 per cent, were idle on the last day of the month, the same percentage as was recorded in December. Unemployment, however, showed a moderate increase over January, 1932, conditions, when the percentage of idleness stood at 22.0. A distinctly unfavourable situation was reported from Nova Scotia, recessions in activity on a smaller scale being recorded by Manitoba and Saskatchewan unions. In Ontario little change occurred, though the tendency was towards lessened activity. Improvements sufficient to offset these declines, however, were reported from Quebec, British Columbia, Alberta and New Brunswick, the gains in the first two provinces named being around 4 per cent and in the latter two, fractional only. Pronounced curtailment of operations was evident among Ontario and Nova Scotia unions from January, 1932, and in Manitoba, Saskatchewan and Alberta declines in activity of lesser degree, though noteworthy, occurred. Quebec unions, on the other hand, reported employment advances on a small scale. New Brunswick and British Columbia showing nominal gains only.

Appearing elsewhere in this issue is a report in greater detail with tabular statements on unemployment at the close of January, 1933.

Reports from the Offices of the Employment Service of Canada for the month of January, 1933, showed 28,767 references of persons to positions and a total of 27,304 placements. Of these, the placements in regular employment were 12,456, of which 9,181 were of men and 3,275 of women, while placements in casual work totalled 14,848. Vacancies offered by employers to the Service numbered 28,602. Of these 22,154

were for men and 6,448 for women, while applications for employment were registered from 43,752 men and 13,121 women, a total of 56,873. A gain in applications received was shown when the business of the month was compared with that of the preceding period, but vacancies and placements each recorded a decline in comparison with the corresponding period a year ago. Losses were registered in all divisions, the reports for December, 1932, showing 30,885 vacancies offered, 49,736 applications made, and 29,192 placements effected, while in January, 1932, there were recorded 31,538 vacancies, 57,755 applications for work and 30,721 placements in regular and casual employment. A report in detail of the work of the offices for the month of January, 1933, will be found elsewhere in this issue.

According to a report prepared by the Dominion Bureau of Statistics, the value of permits issued in 61 cities in Canada during January, 1933, was \$1,163,878, as compared with \$1,480,731 in the preceding month and with \$2,761,929 in January, 1932.

The value of construction awards throughout the Dominion during February, 1933, is estimated by the *MacLean Building Review* at \$3,149,300. Of this total, \$1,001,200 was for engineering purposes; \$869,300 was for residential buildings; \$749,700 was for business buildings, and \$529,100 was for industrial purposes. The apportionment of the contracts awarded during February by provinces was as follows: Quebec, \$1,209,500; Ontario, \$965,900; British Columbia, \$590,300; Nova Scotia, \$158,100; Alberta, \$96,000; Manitoba, \$79,200; New Brunswick, \$35,000; Saskatchewan, 15,300.

### Production and Trade

Figures showing the volume of production in certain industries during recent months and also in the corresponding months last year are shown in the table on page 260.

The *Monthly Review of Business Statistics*, published by the Dominion Bureau of Statistics, contains the following summary: Economic conditions in Canada showed a slight improvement in January over the preceding month. The chief element in that recovery was the decided strength in government bonds. The yield on four refunding bonds of the Dominion Government averaged 4.55 per cent in January compared with 4.78 per cent in the last month of 1932, and the yield on Ontario Government bonds was 4.75 per cent compared with 4.92 per cent. The decline in high grade

bond yields has a direct bearing on the credit situation in Canada, and the firmness in bond prices since the beginning of the year has consequently been one of the most constructive factors. The level of speculative stock prices was more than maintained in January, the index of 130 common stocks traded on the Montreal and Toronto stock exchanges being 51.6 in January compared with 51.3 in December. Weekly indexes for the first part of February disclose reaction but the level is still higher than the low point reached in June, 1932. The marked gain in the stocks of gold mining companies since midsummer 1932 directs attention to an industry operating under favourable conditions. The index of 11 gold stocks was 77.5 in the week of February 9 compared with 48.5, the low point of 1932.

Bank deposits at the end of December, after seasonal adjustment, showed a moderate gain. It is noteworthy that notice deposits were greater on December 31 than on the corresponding date of 1931, while in the meantime current loans have been consistently liquidated.

The improvement in the financial background failed to bring about greater activity in productive enterprise and in many lines a new low point on the present movement was reached. Mineral production declined from the preceding month and the output of foodstuffs was in lesser volume. After adjustment for seasonal tendencies, the construction, iron and steel and automobile industries showed moderate gains but levels of operation were decidedly low.

Exports of nickel were 3,079,000 pounds compared with 2,175,000 in December. The exports of fine copper in ore and blister were 1,362,000 pounds compared with 4,336,000 in the preceding month. Lead production showed reduction in December, and zinc spelter exports declined in the month under review. The receipts of gold at the Mint from mines were 253,430 ounces compared with 238,999 in December, but shipments including exports showed a gain less than normal for the season. Silver shipments showed a considerable decline. Asbestos shipments declined less than normal for the season, while bauxite imports for the manufacture of aluminium showed decline.

Flour production showed considerable contraction in the last month for which statistics are available, and the output of oatmeal and rolled oats was in lesser volume. Sugar in the first four weeks of the year was produced in limited quantities, most of the decline being explained by seasonal considerations. Cattle and sheep slaughterings showed a gain in January, while hogs were slaughtered in reduced numbers. Cheese and canned salmon exports dropped off in January even after

seasonal adjustment. Release for consumption of raw leaf tobacco and cigarettes showed gain in January, the latter numbering 310,145,000 compared with 304,614,000. Cigars were withdrawn from bond in lesser volume. Imports of crude rubber showed a gain, the total being 2,663,000 pounds compared with 2,109,000. The output of leather boots and shoes showed decline in December after being well maintained throughout the preceding months of 1932. Imports of raw cotton at 8,765,000 pounds compared with 13,819,000, showed marked decline, while imports of cotton yarn were greater. Wool for further manufacture showed a considerable decline.

The gain in the output of newsprint was less than normal for the season. Exports of wood pulp, planks, boards and shingles showed gain in January after seasonal adjustment, the movement of shingles being 83,718,000 compared with 73,138,000.

Production of steel ingots was 40,766 tons compared with 30,755 and the pig iron output was 29,209 tons compared with 27,031. The activity at Sydney was the main factor in the gain during January. The output of automobiles was 3,358 units compared with 2,139, a slight gain being shown after seasonal adjustment. Production of coke in December was 150,253 tons compared with 142,616 in November. Imports of crude petroleum were 35,085,000 gallons compared with 32,808,000 the index after seasonal adjustment being 86.0 compared with 71.0 in December.

The decline in the output of electric power on an average daily basis was slightly less than normal for the season. The total production was 1,396,658,000 k.w.h. compared with 1,433,159,000.

The index of distribution was 84.3 compared with 86.1 in December. Car loadings and employment in retail and wholesale trade and merchandise imports showed a decline while exports gained after seasonal adjustment. Car loadings numbered 134,432 compared with 152,562 part of the decline being explained by seasonal considerations. The weekly reports in the first part of February reflect a reactionary tendency. The index of employment in trade was 109.4 compared with 119.6 at the first of January, the decline after seasonal adjustment being 1.6 p.c.

**Coal.**—Canadian mines produced 1,023,243 tons of coal in January, a 29.9 per cent decline from the five-year average for the month of 1,458,923 tons. The January output was made up of 565,411 tons of bituminous coal, 54,350 tons of sub-bituminous coal and 403,482 tons of lignite coal.

Alberta mines produced 474,398 tons as compared with 533,481 tons a year ago. Nova

Scotia's output totalled 279,966 tons, a decrease of 24.5 per cent from the January, 1932, total of 370,652 tons. British Columbia's production declined 16.5 per cent to 127,810 tons as compared with the output in the corresponding month of 1932. An increase of 4.3 per cent was recorded in Saskatchewan's production when 115,311 tons were produced as against 110,505 tons a year ago. New Brunswick mines produced 25,758 tons, an advance of 27.0 per cent above the January, 1932 output of 20,282 tons.

Canadian imports of coal amounted to 486,206 tons, a 48.8 per cent falling-off from the January, 1928-1932, average of 950,158 tons. Imports of anthracite coal were recorded at 140,288 tons, consisting of 122,618 tons from the United States and 17,670 tons from Great Britain. Receipts of bituminous coal were made up of 325,915 tons from the United States and 19,615 tons from Great Britain. Lignite coal importations consisted of 361 tons cleared through British Columbia ports and 27 tons through Manitoba ports.

Exports of Canadian coal in January totalled 37,971 tons or 40.8 per cent below the average for the month during the past five years of 64,143 tons. Clearances through Nova Scotia and New Brunswick ports reached a total of 23,842 tons and through Manitoba, Saskatchewan, Alberta and British Columbia ports, 14,129 tons.

Canada's coal supply in January was computed at 1,471,478 tons or 37.2 per cent below the 1928-1932 average for the month of 2,344,938 tons. The January supply included 140,288 tons of anthracite coal, 874,936 tons of bituminous coal, 54,350 tons of sub-bituminous coal and 401,904 tons of lignite coal.

#### EXTERNAL TRADE

A summary of Canadian trade in January, 1933, prepared by the Department of National Revenue, shows

that the merchandise entering Canada for consumption amounted to \$24,441,133, as compared with \$28,961,212 in the preceding month and with \$34,114,507 in January, 1932. The chief imports in January, 1933, were fibres, textiles and textile products, \$4,739,113; non-metallic minerals and products, \$4,503,840; iron and its products, \$3,654,872.

The merchandise exported from Canada during January 1933, amounted to \$31,561,813 as compared with \$42,615,796 in the preceding month and with \$38,366,699 in January, 1932. The chief exports in January, 1933, were: agricultural and vegetable products, mainly foods, \$10,014,551; wood, wood products and paper, \$8,253,934; animals and animal products, \$5,233,305.

#### Strikes and Lockouts

The time loss due to industrial disputes during February was almost ten times as great as that recorded for the previous month, the number of workers involved showing a similar increase, due to the occurrence during the month of strikes involving over six hundred miners, coal and copper, in two localities, and approximately four thousand women's clothing factory workers. The number of strikes and lockouts recorded, however, showed a substantial decline. As compared with February, 1932, when coal miners and clothing workers were on strike in fairly large numbers, while a steep decline is recorded in the number of strikes and lockouts occurring, the number of workers involved and the time loss incurred are substantially greater, due also to the strikes of coal miners and clothing workers mentioned above. There were in existence during the month five disputes, involving 4,450 workers and resulting in a time loss of 58,500 working days, as compared with eight disputes, involving 622 workers and resulting in a time loss of 5,936 working days in January, 1933. In February, 1932, there were on record eighteen disputes, involving 3,360 workers and resulting in a time loss of 10,452 working days. At the end of the month there were four disputes in progress recorded as strikes and lockouts involving approximately 2,000 workers. These figures do not include those strikes and lockouts in which employment conditions were no longer affected but which had not been called off by the unions involved.

#### Prices

The cost per week of a list of twenty-nine staple foods for an average family of five in terms of the average retail prices in sixty-nine cities was again lower at the beginning of February at \$6.70 as compared with \$6.94 for January; \$7.34 for February, 1932; \$9.44 for February, 1931, \$11.83 for February, 1930; \$10.61 for February, 1922; \$15.77 for February, 1920; \$16.92 for June, 1920 (the peak); and \$7.75 for February, 1914. The most important change was a seasonal fall in the price of eggs, while the prices of beef, pork, lard, milk, butter, cheese, rice and granulated sugar were slightly lower. A slight increase occurred in the prices of mutton and potatoes. Including the cost of fuel and rent with that of foods the total budget averaged \$15.61 for February as compared with \$15.89 for January; \$17.25 for February, 1932; \$19.78 for February, 1931; \$22.12 for February, 1930; \$26.92 for July, 1920 (the peak); and \$14.54 for February, 1914. Fuel was practically unchanged. A decrease in rent was reported from Port Arthur and Fort William.

In wholesale prices the index number calculated by the Dominion Bureau of Statistics, based upon prices in 1926, was lower at 63.6 for February as compared with 63.9 for January; 69.2 for February, 1932; 75.5 for February, 1931; 93.9 for February, 1930; 95.0 for February, 1929; 98.3 for February, 1922; 164.3 for May, 1920 (the peak); and 64.8 for February, 1914. In the classification according to chief component materials seven of the eight main groups were lower and one was higher. The groups which declined were: the Vegetables and Vegetable Products group, because of lower prices for apples, rolled oats, oatmeal, bread, linseed oil and sugar, which more than offset advances in the prices of grains; the Animals and their Products group, due mainly to lower prices for steers, calves,

eggs, hides, cured meats and lard which exerted a greater influence than advances in the prices of hogs, lambs, furs and fresh meats. The Wood, Wood Products and Paper groups because of lower prices for wrapping paper, clear shingles and lumber; the Fibres, Textiles and Textile Products group, because of lower quotations for raw silk and jute; the Iron and its Products group, due to decreases in the prices of pig iron and scrap steel; the Non-Metallic Minerals and their Products group, due to lower prices for gasoline and kerosene; and the Chemicals and Allied Products group, owing to decreases in the prices of borax and tartaric acid. The Non-Ferrous Metals and their Products group was substantially higher, due mainly to increased quotations for antimony, copper, lead, silver, tin and zinc.

### Apprenticeship Council in New Zealand

The New Zealand Parliament has under consideration an Apprenticeship Bill which would establish an Apprenticeship Council and machinery for the control of the conditions of Apprenticeship. A registrar of apprentices (who may not hold any other office in the public service) and district registrars, who may be factory inspectors, are to be appointed. An Apprenticeship Council is to be established consisting of the registrar who is to be chairman, two persons nominated by the Ministry of Labour from the organizations of employers in the industries in which apprentices are employed, and two persons similarly nominated from the organizations of the workers. The Apprenticeship Council is to make orders prescribing the wages, hours and conditions of employment to be incorporated in contracts of apprenticeship, the period of apprenticeship in any industry, the probation period and the minimum age at which a person may begin to serve as an apprentice in such industry. Before making such orders, employers and workers and any other persons concerned

are to be given an opportunity of being heard in respect of the matter.

Apprenticeship committees for any industry may also be appointed, to consist of equal numbers of employers' and workers' representatives with such persons (if any) as the Minister may direct or the parties concerned (organizations of employers and workers in the industry) agree on. The qualifications for membership of these Committees and the area of their jurisdiction are prescribed. Apprenticeship Committees may make orders concerning the following matters: cancelling any contract of apprenticeship; prohibiting any employer from employing an apprentice or more than a specified number of apprentices; the transfer of apprentices; requiring employers to give facilities for the apprentice to acquire a proper knowledge of the industry; attendance of the apprentice at technical schools; ordering him to submit to any examination prescribed; withholding any increase of wages; and the exclusion from the apprenticeship term of any period during which wages are withheld.

In the last report of the Department of Education of Manitoba, a school inspector notes a marked raising in the professional standing of teachers in recent years. He states that teachers working under third-class certificates have practically disappeared from Canadian schools and the number of university graduates in the schools is increasing. British Columbia heads Canada with 18.3 per cent of all teachers university graduates; Manitoba comes second with 11.5 per cent, and Ontario third with 9.8 per cent. "The reports from the field," it is stated, "indicate that far too many school boards have no realization of the value to the school

in retaining the services of the same teacher over a period of years. They appear to feel that they have faithfully discharged their duties towards the children as long as they provide a teacher, and their chief concern is to secure one at the lowest possible salary. The trend of salaries has been downward, but the price charged the teachers for board and lodging in the rural districts was not reduced in proportion, indeed, in most cases there was no reduction at all. We seem still to be living in an era of high prices for farm produce in so far as boarding the teachers is concerned."

## RECENT PROCEEDINGS UNDER THE INDUSTRIAL DISPUTES INVESTIGATION ACT

**D**URING the month of February reports were received in the Department of Labour from two Boards of Conciliation and Investigation established to deal with disputes between (1) the Winnipeg Electric Company and certain of its employees being motormen, conductors and busmen, members of the Street Railway Employees' Unit, One Big Union, and (2) the Canadian National Railways and certain of its employees being members of the Brotherhood of Locomotive Firemen and Enginemen.

### Application Received

An application for the establishment of a Board of Conciliation and Investigation was received by the Minister of Labour on March 2 from the Canadian National Railways and Canadian Pacific Railway (subsidiary railways: Dominion Atlantic Railway, Quebec Central Railway, Northern Alberta Railways, and Esquimalt and Nanaimo Railway) to deal with a dispute growing out of a proposed wage reduction applicable to locomotive engineers, locomotive firemen, conductors, trainmen and telegraphers. The railway companies had noti-

fied the employees on January 28, 1933, that, effective March 3, they intended or desired to reduce wages 20 per cent below the basic rates of pay specified in the agreements with these classes of employees which were in effect prior to December 1, 1931, that is to say, another lowering of wages by 10 per cent in addition to the 10 per cent deduction which was in effect during the past year by agreement between the railways and the employees. The employees opposed the 20 per cent reduction from the basic rates of pay.

The application states that approximately 24,000 employees are directly affected or likely to be affected by the dispute.

A Board of Conciliation and Investigation was established by the Minister of Labour on March 9 and members thereof were appointed as follows: on the companies' recommendation, Mr. George C. McDonald, C.A., of Montreal; on the employees' recommendation, Mr. W. F. O'Connor, K.C., of Toronto. Messrs. McDonald and O'Connor have been requested to confer looking to a joint recommendation for a third member, who will be chairman of the Board.

### Report of Board in Dispute Between Canadian National Railways and Employees being Members of the Brotherhood of Locomotive Fire- men and Enginemen.

The Board of Conciliation and Investigation established during December to deal with a dispute between the Canadian National Railways and certain of its employees regarding the perpetuation and application of the rule governing "regulation of mileage," including conditions under which demoted engineers may take and hold positions of firemen, presented a unanimous report to the Minister of Labour on February 22. The application for the establishment of a Board in this matter had been made by employees of the Canadian National Railways who are members of the Brotherhood of Locomotive Firemen and Enginemen. Although not a party to the application, representatives of the Brotherhood of Locomotive Engineers gave evidence before the Board and took part in the negotiations conducted by the Board. The Board was successful in assisting the parties to reach an amicable settlement of the dispute and its report was accompanied by two signed agreements, one between the Canadian National Railways and the Brotherhood of Locomotive

Engineers, and the other between the Canadian National Railways and the Brotherhood of Locomotive Firemen and Enginemen.

The Board was composed as follows: the Hon. Mr. Justice A. Courtney Kingstone, of Toronto, chairman, appointed by the Minister in the absence of a joint recommendation from the other Board members, Messrs. F. Curzon Dobell, advocate, of Montreal, P.Q., and W. F. Nickle, K.C., of Kingston, Ont., nominees of the company and employees, respectively.

### Report of Board

*In the matter of the Industrial Disputes Investigation Act and of a dispute between the Canadian National Railways and certain of its employees being members of the Brotherhood of Locomotive Firemen and Enginemen.*

To the Honourable W. A. GORDON,  
Minister of Labour.

The report of the Board of Conciliation and Investigation constituted under date of December 8, 1932, for the investigation of the dis-

pute above mentioned respectfully sets forth as follows:—

The dispute referred to this Board is stated in the application of the Brotherhood of Locomotive Firemen and Enginemen to be failure to reach an agreement with the Management on the perpetuation and application of rules governing "Representation" and the "Regulation of Mileage," including conditions under which demoted engineers may take and hold positions of firemen.

Satisfactory agreement on the question of the rule governing "Representation" having been reached by the parties before the establishment of the Board, this matter was by consent withdrawn from the application and the "Mileage Regulations" only were investigated by the Board.

In general terms, the contention of the firemen was that the company had permitted the introduction into its schedules with the engineers of certain clauses which violated or conflicted with its agreement with the firemen as contained in the Joint Schedule between the Railway Company, the Brotherhood of Locomotive Engineers and the Brotherhood of Locomotive Firemen and Enginemen executed under date of November 6, 1925, and the purpose of their application, with which mileage regulations recommended by them were submitted, was in brief to request the removal of such conflicting clauses from the Engineers' Schedules and the reinstatement as to both Engineers and firemen of the regulations contained in the above Joint Schedule.

The Railway Company asserted that execution of the Engineers' Schedules now complained of by the firemen had been delayed until the objections made thereto by the firemen had been heard and considered, and in fact until Boards of Conciliation established on the application of the engineers had recommended the adoption by the two principal railway systems in Canada of the provisions which the Engineers' Schedules now contain. The company further stated that it was not itself concerned in the outcome of the present dispute, but would be willing to put into effect any mileage regulations agreed upon by the two brotherhoods *inter se*.

The differences in question become apparent from a comparison of Article 39 of the Joint Schedule of November 6, 1925, with Article 39 of the Engineers' Schedule for Eastern Lines dated August 30, 1929, but in order to present a clear view of their purport some historical resume is necessary.

The Brotherhood of Locomotive Engineers and the Brotherhood of Locomotive Firemen and Enginemen made an agreement in 1913 (known as the Chicago Agreement) covering

*inter alia* mileage limitations and the rules included in this agreement were adopted by the Railway Company for inclusion in the Joint Schedules made from 1913 to 1927 when the agreement was abrogated by the engineers. In 1928 representatives of the two organizations reached a tentative compromise (sometimes called the Cleveland Agreement), subject to ratification by the members of each. This was in fact ratified by the firemen, but not by the engineers. The engineers continued to press the two Canadian railways to change the mileage regulations to meet their views and the railways refused to do so on account of the opposition of the firemen.

The engineers of the Canadian Pacific Railway Company applied to the Department of Labour for the establishment of a Board of Conciliation and Investigation and having obtained a favourable decision from this Board (LABOUR GAZETTE, 1928, page 1327) were able to cause the adoption by the company of the mileage regulations proposed by them. The firemen of the Canadian Pacific Railway Company then applied for and obtained a Board of Conciliation and Investigation whose decision (See LABOUR GAZETTE, 1929, page 128) was that the dispute was primarily between two classes of employees, and not between employer and employee, and accordingly did not constitute a matter contemplated by the provisions of the Act under which the Board was constituted.

The engineers of the Canadian National Railways also applied to the Department of Labour and obtained from a Board of Conciliation and Investigation a decision (See LABOUR GAZETTE, 1929, page 858) recommending the adoption of the same mileage regulations as had been made effective on the Canadian Pacific Railway. The firemen of the Canadian National Railways also applied for a Board of Conciliation and Investigation which decided by a majority that the principles of the Cleveland Agreement would be a fair settlement of the dispute and recommended their adoption. The decisions of the two Boards which dealt with the engineers' applications conceded to them the right to prescribe what mileage men employed as engineers should make when so employed. The Canadian National Railways subsequently carried out the recommendation made to it by the Board established on the application of its engineers and executed with its engineers schedules containing the same mileage regulations as were already in effect on the Canadian Pacific Railway.

In case of each of the Boards above mentioned the railways asserted that the dispute was essentially one between the engineers and the firemen and that the railways themselves,

not being affected in a monetary way, were only concerned as employers anxious to see harmony prevail between the two classes of employees.

The Joint Schedules effective during the continuance of the agreement which existed between the engineers and the firemen from 1913 to 1927 provided mileage regulations which ceased to have effect upon the abrogation of the agreement by the engineers on October 1, 1927, and were replaced qua engineers by the regulations submitted by them and approved by the Boards of Conciliation and Investigation above mentioned. Comparison of the old regulations with the new shows the changes effected. In each case the intention was to provide a stated minimum and maximum number of miles per month for regular engineers and that excess work should be performed by spare engineers who should also be regulated between a certain minimum and maximum. It was laid down that when the mileage earned by engineers in any of the specified classes of service fell below a stated minimum, reductions might be made in the number of engineers employed in that class and that those so laid off (i.e., the junior engineers) might then take firing jobs. Conversely, when business improved so that the mileage earned by the engineers in any of the specified classes increased to a stated average, additions would be made to the number of engineers employed in any such class by promotion of the necessary number of those who were then holding firing jobs. Such adjustments, involving the demotion of engineers to firing jobs and their subsequent repromotion therefrom, are thus based on the amount of mileage earned by engineers, but any change in the mileage regulations naturally affects not only the engineers but the firemen in that every increase in the number of engineers employed lays open vacancies for additional firemen and that every reduction in the number of engineers employed results in unemployment for firemen.

Regulations in the Joint Schedule dated November 6, 1925, provided that no reduction of engineers should be made as long as those in extra passenger service were averaging 4,000 miles per month, in other unassigned services paying freight rates 3,200 miles per month, and on the road extra list 2,400 miles per month, whereas the Engineers' Schedules now in force changed these figures to 4,000, 3,200, and 3,200 miles respectively. Again the regulations of November 6, 1925, provided that demoted engineers should be returned to service as engineers as soon as those in extra passenger service were averaging 4,800 miles per month, in other unassigned service paying freight rates

3,500 miles per month and in road extra service 3,100 miles per month, whereas the present Engineers' Schedules provide for 4,800, 3,800, and 3,800 miles respectively. It will be seen that the change caused an increase of 800 miles in the minimum and of 700 miles in the maximum mileage figures of the spare engineers.

The Brotherhood of Locomotive Engineers, although not a party to the dispute, appeared before the Board and contended that the new regulations were fair, that any regulations affecting engineers were within its own exclusive jurisdiction, that the effect of a provision, known as the recapture clause, introduced into all Engineers' Schedules after the termination of the Joint Schedule of November 6, 1925, was to afford the firemen even greater protection against excessive mileages being made by engineers than they had had under the Joint Schedule (e.g., Engineers' Schedule, Western Region, Article 29H, 2nd paragraph) and that, by voluntarily reducing during the present period of unemployment the stipulated maximums permitted to them under their schedules, the engineers had given evidence of their good faith and of their intention to accord the most generous treatment possible to the firemen.

It will be appreciated from the facts above set forth that the Board was in no doubt from the outset but that any settlement of the dispute between the firemen and the Railway Company must be predicated upon and preceded by a settlement between the two Brotherhoods themselves, or between each of them and the Railway Company. After hearing the evidence offered by the applicants, the Railway Company and the engineers, the Board concentrated all its efforts upon an attempt to effect such a settlement and received from the outset the utmost assistance and co-operation from the representatives of all three interests. Each Brotherhood through its representatives showed itself willing to respond generously to appeals made by members of the Board, unequivocal concessions were made by each side and eventually a mutually satisfactory arrangement was arrived at by each Brotherhood with the Railway Company.

It was clearly understood throughout the negotiations which took place between the members of the Board and the representatives of the two Brotherhoods that any concessions made would in future be recognized as having been made with the object, during the present period of economic depression, of decreasing unemployment, of removing causes of friction between classes of men the conditions of whose employment require

their close association, and of furthering the public interest by assisting the harmonious operation of a publicly owned railway. The undoubted and unquestioned right of each Brotherhood to make and interpret contracts, rules, rates and working agreements for its own members is not to be considered as surrendered or prejudiced in any way by the present modification of certain of the mileage regulations, and the representatives of both Brotherhoods were assured by the Board that nothing contained in the working agreements now concluded between each of them and the Railway Company would at any time in the future be construed to estop them from fully and effectually maintaining any position which would have been open to them, or either of them if such working agreements had not been executed.
